Subject: Transmittal of Soil Sample Results – Mission Yard

On September 13, 2021, Kroner Environmental Services Inc. (KES) collected seventeen soil samples from the top of the stockpile located at Mission Yard (622 North Mission Road). The samples were collected from approximately 3 feet from the surface of the stockpile. The seventeen samples were collected by KES to adequately characterize 10,000 cubic yards of the remaining soil stored at the site for reuse on the project as stated in the Mission Yard Soil Sampling Plan. The samples were transported to American Scientific Laboratory, a California Accredited Laboratory, under chain of custody documentation. The samples were analyzed for Metals by EPA Method 6010B/7471A, Volatile Organic Compounds by EPA Method 8260B, and Total Petroleum Hydrocarbons (TPH) by Method 8015B. Below is a summary of the sample results and attached is the Certified Analytical Report.

Metals
Samples MSP-3 and MSP-7 had total lead detected at 60.8 mg/kg and 86.1 mg/kg. Both lead detections are below the lead limit of 350 mg/kg in the Mission Yard Soil Sampling and Stockpile Management Plan (MYSSMP) and the revised Department of Toxic Substance (DTSC) of 320 mg/kg for lead. However, the lead concentrations detected were above the total threshold limit concentrations (TTLC) for determination of hazardous waste per 22 CCR Chapter 11, Article 3 and also above ten times (by rule of thumb) the STLC value, thus additional Waste Extraction testing (WET) is required.

TPH
The TPH analyses were reported as three different fractions of the hydrocarbon range with C_4- C_{12} representing the gasoline range, C_{13}-C_{22} representing the diesel range and C_{23}-C_{40}, representing the oil range. All the samples had no detectable gasoline range hydrocarbons.

Diesel range hydrocarbons were detected in samples MSP-1, MSP-4, MSP-5, MSP-7, MSP-8, MSP-10, MSP-12 and MSP-15 ranging from 126 mg/kg to 1590 mg/kg which is above the Soil Reuse/Soil Import limit of 100 mg/kg for diesel range hydrocarbons. Diesel range hydrocarbons were detected in samples MSP-2, MSP-6, MSP-9, MSP-11, MSP-16 ranging from 46.0 mg/kg to 92.0 mg/kg which is below Soil Reuse/Soil Import limit of 100 mg/kg for diesel range hydrocarbons. All the other samples were non-detect for diesel range hydrocarbons.

Oil range hydrocarbons were detected in samples MSP-1, MSP-2, MSP-3, MSP-4, MSP-5, MSP-6, MSP-7, MSP-8, MSP-9, MSP-10, MSP-12, MSP-13, MSP-14, MSP-15 and MSP-16 ranging from 88 mg/kg to 606 mg/kg which is below the Soil Reuse/Soil Import limit of 1000 mg/kg for oil range hydrocarbons. All the other samples were non-detect for oil range hydrocarbons.

VOCs
The samples had no detectable VOCs.

Conclusion
Based on the sample analytical results, the 10,000 cubic yards of soil as shown in the attached site figure, the entire stockpile cannot be reused on the project because the soil does not meet the project soil reuse criteria for diesel range hydrocarbons. KES recommends removing approximately 3 feet of soil in the areas that exceeded the diesel range hydrocarbons reuse limit and collecting additional samples for characterization. Samples MSP-3 and MSP-7 had detections of elevated lead. Additional WET testing has been requested and will be provided in a supplementary memo.

If you have any questions regarding this memo, please contact us at (310) 474-1500.

Re: CITADEL Project No. 1814.1002.0
SCAQMD Rule 1466 Dust Monitoring Summary Report
Sixth Street Viaduct
585 South Santa Fe Avenue
Los Angeles, California 90013

Dear Mr. English:

Citadel EHS (Citadel) is pleased to provide this Summary Report detailing dust monitoring activities conducted at the Sixth Street Viaduct Project located at 585 South Santa Fe Avenue in the City of Los Angeles, California (Site). According to information provided by the Client, the soil to be excavated from the Site is impacted with lead. Therefore, the Client requested that Citadel conduct Rule 1466 Particulate Matter 10 (PM10) dust monitoring. The purpose of the dust monitoring was to monitor for particulate emissions from soils with toxic air contaminants and fugitive dust, in accordance with South Coast Air Quality Management District (SCAQMD) Rule 1466. A Site Location Map and Site Map are included as Figures 1 and 2, respectively.

Prior to onsite field activities, Citadel submitted a Rule 1466 Notification Online Form to the SCAQMD. Citadel also prepared a site-specific health and safety plan (HASP). This HASP identified existing and potential hazards for workers at the Site during excavation and dust monitoring activities. A copy of the Rule 1466 Notification and Invoice, and the signed HASP are included in Appendices A and B, respectively.

On February 7, 2022, Citadel representatives, arrived onsite and met with Mr. Jonathan Bridgeman with Rincon; assembled the dust monitoring equipment; and completed the safety orientation prepared by Skanska, the general contractor for the Project. Citadel conducted the dust monitoring at one upwind location and one downwind location between February 7 and February 15, 2022, during earth-moving activities per the requirements of section (d) Monitoring Requirements of SCAQMD Rule 1466 as amended on June 4, 2021. The prevailing wind in this area is from the west, but the excavation and loading activities were performed during a period of winds predominantly from the northeast. The upwind location was located in the northeast corner of the Site and the downwind location was along the south boundary of the Site, southwest of the upwind monitor. All work was conducted under the supervision of the On-Site Dust Supervisor, Mr. Mike Pendergrass.

The dust monitoring was conducted using TSI 8530 DustTrak II Aerosol Monitors (DustTraks) equipped with a TSI auto zero module, a TSI heated inlet and a Netronix Thiamis 1000 data module. Citadel also monitored wind speed and direction using a Davis Vantage Pro 2. Wind direction and speed were reported via an onsite monitor every one minute or less. However, the data available for download only recorded the average wind direction and speed per hour on February 7, 8, 9, 10, and 14, 2022. The upwind DustTrak failed to record data on February 7, 2022, from 8:02am to 10:43am. Manual documentation of the measurements was conducted during

the data loss and is included in Appendix E. The failure was resolved by February 8, 2022. The weather data is reported in Table 1 and the calculated 2-hour rolling average PM10 concentrations from February 7 to February 15, 2022, is included in Table 2.

An intra-instrument precision test was performed per the requirements of Rule 1466 Appendix 2 on February 7, 2022, and again on February 14, 2022. The results were within the precision requirements for both tests. The results are included in Appendix C.

No exceedances of the threshold value of 25 micrograms per cubic meter ($\mu g/m^3$) for the difference between the upwind and downwind locations were observed for the 2-hour rolling average PM10 concentrations recorded during the duration of the project. An instantaneous exceedance on February 7, 2022, at 7:12am was observed due to a truck driving by the DustTrak.

Citadel's daily field notes, SCQAMD Rule 1466 Logs, and Photographic Log are included in Appendices D, E, and F, respectively.

If after your review of this report, you have any questions or require additional information, please do not hesitate to contact our office at (818) 246-2707.

Sincerely,
CITADEL EHS

1.0 SITE DESCRIPTION

Citadel EHS (Citadel) has prepared this Health and Safety Plan (HASP) for use during Soil Monitoring Services associated with the removal of soil impacted with lead to be conducted at 585 South Santa Fe Avenue, Los Angeles, California (Site).

Activities conducted under Citadel's direction at the Site will be in compliance with "OSWER Integrated Health and Safety Program Operating Practices for OSWER Field Activities," Pub. 9285.0-OIC (Nov. 2002), available at http://www.epa.gov/nscep/index.html, and "EPA's Emergency Responder Health and Safety Manual," OSWER Directive 9285.3-12 (July 2005 and updates), at http://www.epaosc.org/_HealthSafetyManual/manual-index.htm. In addition, this Site-Specific HASP shall comply with all currently applicable Occupational Safety and Health Administration (OSHA) regulations found at 29 Code of Federal Regulations (CFR) Part 1910, and other applicable federal, state, and local laws, regulations, and statutes. A copy of this HASP will be kept on-Site during scheduled field activities.

2.0 BACKGROUND

Based on information reviewed, Citadel understands that the Site is a former series of warehouse along the north side of Sixth Street between South Mateo Street and South Santa Fe Avenue. The Site will be undergoing excavation activities for the removal of soil impacted with lead as part of the Sixth Street Viaduct project.

The Client provided information from a 2021 report prepared by Tetra Tech that indicated elevated concentrations of lead are found in near surface soils at the Site. Maximum lead concentration found at the Site is 860 milligrams per kilogram (mg/kg).

Based on the waste characterization information supplied by the Client, lead impacted soils are characterized as non-RCRA hazardous waste due to elevated levels of lead. No soil should be transported offsite without receiving prior approval for disposal at the appropriate offsite facility/landfill.

The purpose of SCAQMD Rule 1466 is to minimize the amount of off-site fugitive dust emissions containing toxic air contaminants by reducing particulate emissions in the ambient air as a result of earth-moving activities, including excavation, grading, handling, treating, stockpiling, transferring, and removing contaminated soil from the Site. Lead is a toxic air contaminant as listed in Rule 1466 (Table I). As such, the Site is required to minimize fugitive dust emissions [(e)(2-8)], and comply with notification [(f)] and recordkeeping requirements [(h)].

3.0 SAFETY POLICY

Safety will be given primary importance in the planning and operation of this project. It is the policy of Citadel to conform to current OSHA standards in construction and local government agency requirements having authority over the project as regards to Citadel employees and public safety.

Each subcontracting firm will assume primary responsibility for the safety of their own work in regard to their employees and other persons. Subcontractors will assume the duty to comply with OSHA, and all other federal, state and local regulations.

The subcontractors work will be monitored by Citadel project managers for implementation of the Citadel HASP, while adhering to their own safety program. Citadel will retain the authority and power to enforce this HASP during the progress of the work. Any deficiencies in safe work practices will be brought to the attention of the subcontractor firm's supervisor for immediate corrective action. If the subcontractor fails or refuses to take corrective action promptly a stop work order shall be issued and the subcontractor or the subcontractor employee may be removed from the project.

4.0 WORK DESCRIPTION

SOIL EXCAVATION MONITORING AND CONFIRMATION SAMPLING

Citadel will provide on-site monitoring during excavation of soil impacted with lead per the requirements of South Coast Air Quality Management District (SCAQMD) Rule 1466. The Client estimates that the excavation activities will take four full days and 17 half days.

Upwind and downwind fence line monitoring for fugitive dust will be conducted by Citadel during excavation at the Site. Continuous real-time monitoring will be conducted during soil disturbing activities. If the PM10 concentration averaged over two hours exceeds 25 micrograms per cubic meter (µg/m^3), work shall stop, until the PM10 concentration is equal to or less than 25 µg/m^3 averaged over 30 minutes.

Dust control will be available continuously during excavation and handling of lead impacted soil. During excavation, water will be used to minimize airborne dust.

5.0 KEY PROJECT PERSONNEL AND RESPONSIBILITIES

Project Manager	Mike Pendergrass (Citadel)
Site Safety Officer (SSO)/Project Monitor	Mike Pendergrass, Tim Lambert, Alexandria Reed, Scott Grasse, Annie Liu, Muriel Nacar (Citadel)
Subcontractor Personnel	TBD

PROJECT MANAGER

The Project Manager has the ultimate responsibility for the health and safety of personnel at the Site. The Project Manager is responsible for:

- Ensuring that project personnel review and understand the requirements of this HASP;
- Keeping on-site personnel informed of the expected hazards and appropriate protective measures at the Site; and
- Providing resources necessary for maintaining a safe and health work environment

SITE SAFETY OFFICER/PROJECT MONITOR

The SSO is responsible for enforcing the requirements of this HASP once site work begins. The SSO has the authority to immediately correct situations where noncompliance with this HASP is noted and to immediately stop work in cases where an immediate danger to site workers or the environment is perceived. Responsibilities of the SSO also include:

- Obtaining and distributing PPE and air monitoring equipment necessary for this project;
- Limiting access at the Site to authorized personnel;
- Communicating unusual or unforeseen conditions at the Site to the Project Manager;
- Supervising and monitoring the safety performance of site personnel to evaluate the effectiveness of health and safety procedures and correct deficiencies;
- Conducting daily tailgate safety meetings before each day's activities begin; and
- Conducting a site safety inspection prior to the commencement of each day's field activities.

SUBCONTRACTOR PERSONNEL

Subcontractor personnel are expected to comply with the minimum requirements specified in this HASP. Failure to do so may result in the dismissal of the subcontractor or any of the subcontractor's workers from the job site. Subcontractors may employ health and safety procedures that afford them a greater measure of personal protection than those specified in this plan as long as they do not pose additional hazards to themselves, the environment, or others working in the area.

6.0 SITE CONTROL MEASURES

The SSO or Project Manager has been designated to coordinate access and security on site.

7.0 STANDARD OPERATING PROCEDURES

GENERAL SAFETY

- Maintain good housekeeping at all times in all project work areas.
- Check the work area to determine what problems or hazards may exist.
- Designate specific areas for the proper storage of materials.
- Store tools, equipment, materials, and supplies in an orderly manner.
- Provide containers for collecting trash and other debris.
- Clean up all spills quickly.
- Report unsafe conditions or unsafe acts to your supervisor immediately.
- Report all occupational illnesses, injuries, and vehicle accidents.
- Do not wear loose clothing, wristwatches, and other loose accessories when within arm's reach of moving machinery.
- Emergency exits and evacuation areas should be clearly marked during work activities.
- Personnel fall protection is required when climbing to perform maintenance six feet or higher above ground.
- Inspect hand tools and use proper PPE.
- Ensure proper grounding and guarding of equipment.
- Keep hands and fingers out of pinch points.
- Use good ergonomic posturing when working with heavy items.

HAZARD EVALUATION

The following substances are known or suspected to be on site. The primary hazards of each are identified as follows:

Substances	Concentration	Primary Hazards
Lead	Various	Inhalation, ingestion, dermal or eye contact

LEAD

Acute exposure to lead is associated with impaired kidney function, high blood pressure, nervous system and neurobehavioral effects, cognitive dysfunction later in life, and subtle cognitive effects attributed to prenatal exposure. Pregnant women need to be especially concerned with reducing lead exposure since this can have serious impact on the developing fetus. Health effects at these very high blood lead levels can range from acute effects such as convulsions, coma, and in some cases, death, to more chronic conditions such as anemia, peripheral neuropathy, interstitial kidney fibrosis, and severe abdominal cramping.

Based on limited evidence of human carcinogenic effects, workers may develop stomach cancer and lung cancer following inhalation exposure to lead, but more studies are needed to demonstrate the cancer risks compared to the levels and durations of lead exposure, and possibly confounding factors such as smoking, diet, and other carcinogens in the workplace. Experimental research indicates that rats and mice develop renal tumors following exposure to lead.

ACTION LEVELS AND EXPOSURE LIMITS

The required OSHA PEL for lead is no greater than 0.05 mg/m^3 averaged over an 8-hour period. PPE shall be required when working in areas where lead-impacted soil may be present at a concentration higher than 0.05 mg/m^3 (Cal-OSHA PEL).

DustTrak monitors will be used to determine fugitive dust emissions in the ambient air at the Site. These instruments only indicate total particulate levels and not specific contaminant concentrations. However, using the analytical results from soil samples previously collected, a total particulate Site Action Level can be calculated using the following equation:

$$\frac{OSHA\ PEL\ for\ Contaminant\ (\frac{mg}{m^3})}{(Contaminant\ decimal\ concentration)\ (Safety\ factor)} = Total\ Dust\ Action\ Level\ (\frac{mg}{m^3})$$

The lead value of 860 mg/kg was used in the calculation, a safety factor of 2 times (200%) was used to help ensure that the PEL for lead will not be exceeded during excavation activities. The resulting calculation is as follows:

$$\left(\frac{860\ mg}{1\ kg}\right)\left(\frac{1\ kg}{1{,}000{,}000\ mg}\right) = 0.000567$$

$$\frac{0.05\ \frac{mg}{m^3}}{(0.000860)(2)} = 29.1\ \frac{mg}{m^3}\ of\ particulates$$

Therefore, the total dust action level (TDAL) for lead is 29.1 mg/m^3. Rule 1466 requires a work stoppage if the PM_{10} concentration average exceeds 25 µg/m^3 until the PM_{10} concentration is

equal to or less than 25 µg/m^3 averaged over 30 minutes. This action level is much lower than the TDAL calculated above of 29.1 mg/m^3 and the Rule 1466 limitation for PM_{10} will be reached well before the calculated TDAL for lead of 29.1 mg/m^3.

COMMUNICATION PROCEDURES

Due to the close proximity of all field crew members, the necessity for radio communication is not necessary.

The following standard hand signals will be used:

Hand drawn across throat .....Cease operation immediately
Hand gripping throat .....Out of air, can't breathe
Grip partner's wrist or both hands around waist ..... Leave area immediately
Hands on top of head .....Need assistance
Thumbs up ..... OK, I am alright, understood
Thumbs down.....No, negative

FIELD VEHICLES

- Equip vehicles with emergency supplies and equipment.
- Maintain both a first aid kit and fire extinguisher in the field vehicle at all times.
- Utilize a rotary beacon on vehicle if working adjacent to active roadway.
- Always wear seatbelt while operating vehicle.
- Tie down loose items.

MANUAL LIFTING

- Personnel shall seek assistance when performing manual lifting tasks that appear beyond their physical capabilities.
- Assess the situation before lifting, ensure good lifting and body positioning practices, and ensure good carrying and setting down practices.

HEAT EXPOSURE

- Limit exposure to the sun or take extra precautions when the UV index rating is high.
- Take lunch and breaks in shaded areas.
- Create shade by using umbrellas, tents, and canopies.
- Wear proper clothing: long sleeved shirts with collars, long pants, and UV-protective sunglasses or safety glasses.
- Apply sunscreen generously to all exposed skin surfaces at least 20 minutes before exposure. Re-apply sunscreen at least every 2 hours, and more frequently when sweating or performing activities where sunscreen may be wiped off.
- Communicate any concerns regarding heat stress to a supervisor.
- Keep hydrated throughout the day (about 4 cups per hour).
- OHSA's Heat Index:

Heat Index	Risk Level	Protective Measures
Less than 91°F	Lower (Caution)	Basic heat safety and planning
91°F to 103°F	Moderate	Implement precautions and heighten awareness
103°F to 115°F	High	Additional precautions to protect workers
Greater than 115°F	Very High to Extreme	Triggers even more aggressive protective measures

Utilities (Under Ground and Above Ground): Low Hazard. All boring locations will be hand drilled and stop work will be enforced if any utilities are encountered.

Biological Hazards: Low to Medium Hazard. Beware of spiders, insects and other possible animals.

Site Instability: Low to Medium Hazard. The Site will be inspected prior to equipment placement and closely monitored. Any settling of the equipment will cause the work to stop immediately.

Equipment Refueling: Low Hazard. Equipment shall not be refueled with the engine running. Cigarettes, open flames, or other ignition sources are not allowed within 50 feet of the fueling location.

Personnel Injury: Upon notification of an injury, the Project Field Leader should evaluate the nature of the injury, and the affected person should be decontaminated to the extent possible prior to movement. The Project Field Leader shall initiate the appropriate first aid, and contact should be made for an ambulance and with the designated medical facility (if required).

Fire/Explosion: The fire department shall be alerted, and all personnel moved to a safe distance from the involved area.

Other Equipment Failure: If any other equipment on site fails to operate properly, the Project Team Leader shall be notified and then determine the effect of this failure on continuing operations on site. If the failure affects the safety of personnel or prevents completion of the Work Plan tasks, work will cease until the situation is evaluated and appropriate actions taken.

8.0 PERSONAL PROTECTIVE EQUIPMENT

The purpose of PPE is to protect employees from hazards and potential hazards they are likely to encounter during site activities. The amount and type of PPE used will be based on the nature of the hazard encountered or anticipated. Respiratory protection will be utilized when an airborne hazard has been identified using real-time air monitoring devices, or as a precautionary measure in areas designated by the SSO, elevating to level C. If this occurs, contractor personnel shall be respirator-approved.

Dermal protection, primarily in the form of chemical-resistant gloves and coveralls, will be worn whenever contact with chemically affected materials (e.g. soils, groundwater, sludge) is anticipated, without regard to the level of respiratory protection required.

Based on evaluation of potential hazards, the following levels of personal protection have been designated for the applicable work areas or tasks:

Location	Job Function	Level of Protection
Controlled Area	All Workers	A B C (D) Other

Specific protective equipment for each level of protection is as follows:

Level A
- Fully-encapsulating suit
- SCBA
- Disposable coveralls

Level B
- Splash gear
- SCBA

Level C
- Splash gear
- Half-face canister respirator with H_2S/VOC cartridge
- Mouth/nose canister respirator
- Efficiency 100 (HEPA)

Level D
- Hard hat
- Ear plugs
- Neoprene or leather gloves - nitrile gloves
- Safety vests and Glasses
- Hard toe boots

NO CHANGES TO THE SPECIFIED LEVELS OF PROTECTION SHALL BE MADE WITHOUT THE APPROVAL OF THE SSO OR PROJECT MANAGER.

9.0 DECONTAMINATION PROCEDURES

Despite protective procedures, personnel may come in contact with potentially hazardous compounds while performing work tasks. If so, decontamination needs to take place using an Alconox or tri-sodium phosphate (TSP), followed by a rinse with clean water. Standard decontamination procedure for levels C and D are as follows:

- Equipment drop
- Boot cover and outer glove wash and rinse
- Boot cover and out glove removal
- Suit wash and rinse
- Suit removal
- Safety boot wash and rinse
- Inner glove wash and rinse
- Respirator removal
- Inner glove removal
- Field wash of hands and face

Workers should employ only applicable steps in accordance with level of PPE worn and extent of contamination present. The SSO shall maintain adequate quantities of clean water to be used for personal decontamination (i.e. field wash of hands and face) whenever a suitable washing facility is not located in the immediate vicinity of the work area. Disposable items will be disposed of in an appropriate container. Wash and rinse water generated from decontamination activities will be handled and disposed of properly. Non-disposable items may need to be sanitized before reuse. Each site worker is responsible for the maintenance, decontamination, and sanitizing of his/her own PPE.

Used equipment may be decontaminated as follows:

- An Alconox or TSP and water solution will be used to wash the equipment.
- The equipment will then be rinsed with clean water.

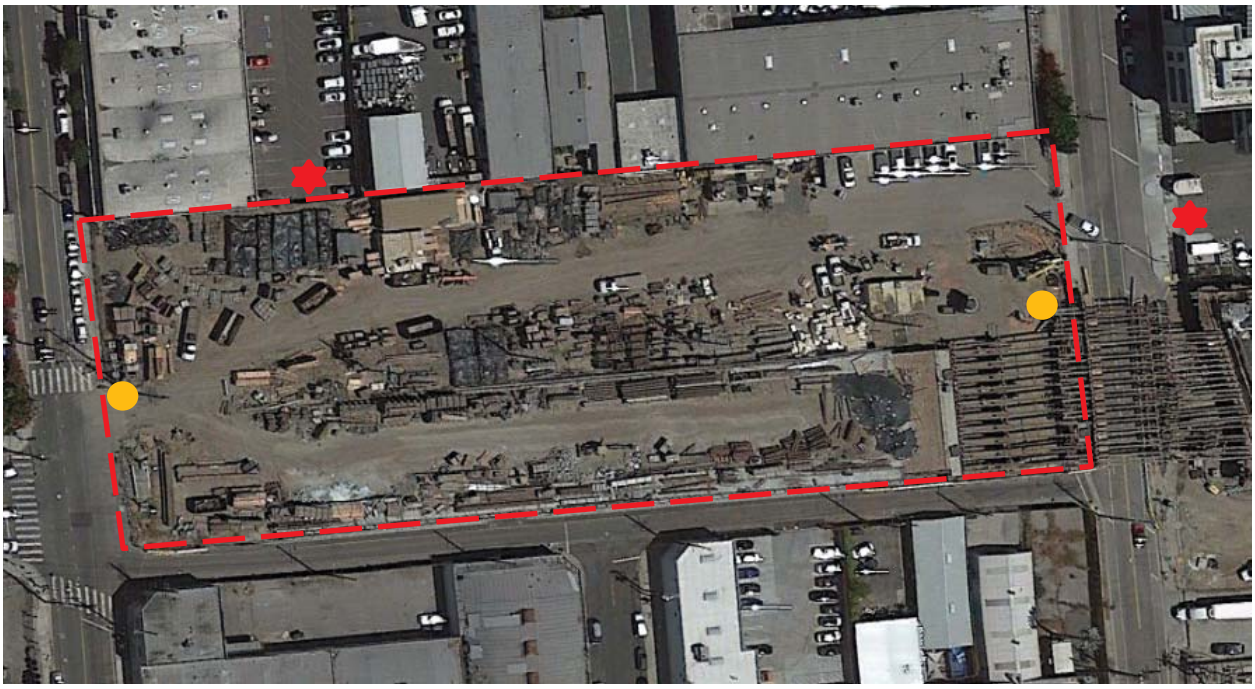
Each person must follow these procedures to reduce the potential for transferring chemically affected materials offsite.

10.0 EMERGENCY PROCEDURES

In the event of an emergency, site personnel will signal distress with three blasts of a horn (a vehicle horn will be sufficient), or other predetermined signal. Communication signals, such as hand signals, must be established where communication equipment is not feasible or in areas of loud noise.

The SSO will designate evacuation routes and refuge areas to be used in the event of an emergency. Site personnel will stay upwind from vapors or smoke and upgradient from spills. Workers should exit through the established decontamination areas wherever possible. If evacuation cannot be done through an established decontamination area, site personnel will go to the nearest safe location and remove contaminated clothing there. Personnel will assemble at the predetermined refuge following evacuation and decontamination. The SSO will count and identify site personnel to verify that all personnel have been evacuated safely. Please refer to Figure 1.0 for the evacuation route and refuge location.

FIGURE 1.0 – EVACUATION ROUTE AND REFUGE AREAS



= Approximate Site Boundaries

= Refuge Areas

= Approximate DustTrak Monitor Locations – Upwind & Downwind based on historical prevailing winds. Actual locations will be based on current wind conditions.

Penal-Ware® 1696 Series

Econo Blowout Jet Toilet - Off Floor

1696-W-1

Fixture May Show Some Available Options

Please visit ***www.acorneng.com*** for most current specifications.

Econo Blowout Jet Toilet - Off Floor

Fixture is arranged to be installed on finished wall and serviced from an accessible pipe chase. Optional Wall Sleeve or Metal Template is recommended for all installations for required wall openings. Fixture mounting flange is fabricated of 16 gage and toilet bowl is fabricated of 14 gage, type 304 stainless steel. Exterior is polished to a satin finish. The inside of the toilet bowl also has a satin finish. Fixture is seamless welded construction. There are no accessible voids or crevices where contraband can be concealed.

Toilet is blowout jet type with an elongated bowl manufactured to ASME A112.19.3 and CSA B45.4 requirements and will flush with a minimum of 25 PSI flow pressure when used in conjunction with a minimum of 1.6 GPF. Trap has a minimum of 3-1/2" seal and will pass a 2-1/8" ball. Toilet waste outlet is 2-3/8" diameter plain end and extends beyond the rear of the fixture 11-1/4". Toilet flushing inlet has 1-1/2" NPS male end and extends beyond the rear of the fixture 9-1/2".

Regularly Furnished items include mounting hardware for walls up to 8" thick to anchor thru fixture slots.

GUIDE SPECIFICATIONS

Provide and install Acorn Penal-Ware® Econo Blowout Jet Toilet (specify model number and options). Fixture shall be fabricated from 14 gage and 16 gage, type 304 stainless steel. Construction shall be seamless welded. Toilet shall be concealed blowout jet type with an elongated bowl and a self-draining flushing rim. Toilet shall meet ASME A112.19.3 and CSA B45.4 requirements and will flush with a minimum of 25 PSI flow pressure when used in conjunction with a minimum of 1.6 GPF. Toilet trap shall have a minimum 3-1/2" seal that shall pass a 2-1/8" diameter ball and be fully enclosed. Fixture shall withstand loadings of 1,500 pounds without permanent damage. Fixture shall be furnished with necessary fasteners for proper installation.

MADERA™ FloWise® 16-1/2" HEIGHT ELONGATED FLUSHOMETER TOILET

VITREOUS CHINA LESS EVERCLEAN®

MADERA™ FloWise® 16-1/2" HEIGHT ELONGATED LESS EVERCLEAN®

- Floor mount flushometer valve toilet
- Vitreous china
- High Efficiency, Low Consumption. Operates in the range of 1.1 gpf to 1.6 gpf (4.2 Lpf to 6.0 Lpf)
- Meets definition of HET (High Efficiency Toilet) when used with a high efficiency flush valve (1.28 gpf or 1.6 / 1.1 gpf dual flush)
- Fully glazed 2-1/8" trapway
- Elongated bowl
- 10" or 12" roughing-in
- 16-1/2" rim height for accessible application
- Condensation channel
- Powerful direct-fed siphon jet action
- 10" x 12" water surface area
- 1-1/2" inlet spud
- 2 bolt caps
- 100% factory flush tested

❏ **3043.001** Elongated bowl only, top spud
❏ **3248.001** Elongated bowl only, top spud with slotted rim for bedpan holding (White only)
❏ **3249.001** Elongated bowl only, back spud

System MaP* Score:
- 1,000 grams of miso @ 1.1 gpf, 1.28 gpf or 1.6 gpf when used with an American Standard flush valve

* Maximum Performance (MaP) testing performed by IAPMO R&T Lab. MaP Report conducted by Veritec Consulting, Inc. and Koeller and Company.

Component Parts:
❏ **047007-0070A** Inlet Spud (furnished with bowl)
❏ **481310-100** Bolt caps with retainers (furnished with bowl)

Nominal Dimensions:
718 x 356 x 419mm
(28-1/4" x 14" x 16-1/2")

Fixture only, less seat and flush valve

Recommended working pressure–between 25 psi at valve when flushing and 80 psi static

Compliance Certifications -
Meets or Exceeds the Following Specifications:
- ASME A112.19.2-2008 / CSA B45.1-08 for Vitreous China Fixtures

Penal-Ware® 1652LRB Series

18" Lavatory with Rectangular Bowl - ADA 2010 Compliant

1652LRB-1-DMS-04-M

Fixture May Show Some Available Options

Please visit ***www.acorneng.com*** for most current specifications.

18" Lavatory with Lavy Rectangular Bowl - ADA 2010 Compliant

Fixture is designed to be installed on a finished wall and serviced from an accessible pipe chase. There are no voids or crevices where contraband can be concealed. Features include an integral self-draining soap dish and mounting hardware for walls up to 8” thick. Optional Wall Sleeve or Metal Template is recommended to provide through wall openings and mounting points. Lavatory complies with ANSI, UFAS, CBC and ADA 2010 requirements for accessibility. Compliance is subject to the interpretation and requirements of the local code authority.

Cabinet is fabricated from 14 gage, type 304 stainless steel and is seamless welded construction with exposed surfaces polished to a satin finish. Cabinet interior is sound deadened with fire-resistant material.

Lavatory Rectangular Bowl is 14" x 12" x 4-1/2" deep and includes an integral fast drain. Standard elbow waste outlet is 1-1/2" O.D. plain end and extends 3" beyond the back of wall.

Optional Lavatory Valve is an pneumatically operated, pushbutton Air-Control valve using atmospheric air. Pushbutton is vandal-resistant and requires less than 5 pounds to activate valve. Valve is metering, non-hold open type. Valve timing is adjustable from 5 to 60 seconds. Valve includes a 0.5 GPM flow control and can be remotely located up to 10 feet from the operating pushbutton. Valve and Bubbler conforms with lead free requirements of NSF61, Section 9 and CHSC 116875.

Suffix Option DMB, Deck Mounted Bubbler optionally available, provides a drinking bubbler that meets ADA requirements and lead free requirements of NSF61, Section 9 and CHSC 116875. This option also includes a separate pushbutton and non-metering Air-Control valve with .7 GPM flow control.

GUIDE SPECIFICATION

Provide and install an Acorn Penal-Ware, 18" wide ADA 2010 Compliant Lavatory with rectangular bowl (specify model number and options). Unit shall conform to ANSI, UFAS, CBC and ADA requirements for accessibility. Fixture shall be fabricated from 14 gage, type 304 stainless steel. Construction shall be seamless welded and exposed surfaces shall have a satin finish. Deck shall have an air-circulating, self-draining soap dish. Provide Air-Control pneumatically operated, metering, non-hold open valve with ADA compliant pushbutton. Valve and Bubbler conform with lead free requirements of NSF61, Section 9 and CHSC 116875. Cabinet interior shall be sound deadened with fire-resistant material. Fixture shall be furnished with necessary fasteners for proper installation.

A- ROUGH-IN FOR FIXTURE WASTE OUTLET: 1-1/2" O.D. ELBOW PLAIN END (1) PROVIDED.

B- SEE REFERENCE DRAWING BOX FOR APPROPRIATE VALVE INSTALLATION SHEETS.

C- REMOVE THE ACCESS PANEL (2) TO INSTALL OPTIONAL -DMB DECK MOUNTED BUBBLER (3) AND PUSHBUTTON (4).

D- THREAD 1/2" X 13 UNC STUDS (5) INTO ANCHOR TAPPINGS (6) ON REAR OF FIXTURE. STUDS (5) MUST HAVE A MINIMUM OF 1/2" ENGAGEMENT.

E- ALIGN STUDS (5) WITH THRU ANCHORING WALL OPENINGS OR THRU OPENGINS ON OPTIONAL -SW WALL SLEEVE AND SLIDE FIXTURE TO WALL.

F- FROM CHASE SIDE TIGHTEN WASHERS (7) AND NUTS (8) PROVIDED ON EXPOSED STUDS (5) TO 60 LBS.

G- MAKE UP LAVY WASTE CONNECTIONS: WASTE OUTLET (1) SUITABLE FOR A COMPRESSION CONNECTION.

NOTE: REFER TO ADA ACCESSIBILITY GUIDELINES FOR COMPLETE INSTALLATION REQUIREMENTS.

NOTE: FIXTURE IS SHOWN ON AN 8" WALL. FOR INSTALLATION ON SMALLER WALLS LAVY WASTE TAILPIECE CAN BE TRIMMED TO FIT BY INSTALLER.

AIR-CONTROL SERVOMOTORS	
METERING	9955-000-003
NON-METERING	9955-001-003

INSTALLATION INSTRUCTIONS:

A- PRIOR TO INSTALLATION OF THE FIXTURE, MOUNT PUSHBUTTONS (1) AND BUBBLER (2) TO THE BACKSPLASH.

B- INSTALL THE PLUMBING FIXTURE TO THE WALL INCLUDING UPPER SUPPORT PLATE (3).

C- MOUNT THE AIR-CONTROL VALVE ASSEMBLY (4). LOCATE AS REQUIRED. MAXIMUM ALLOWABLE DISTANCE BETWEEN PUSHBUTTON (1) AND AIR-CONTROL SERVOMOTOR (5) IS 10 FEET. WALL ANCHORING HARDWARE ARE BY OTHERS.

D- CONNECT 1/8" O.D. POLYETHYLENE AIR LINES (6) TO PUSHBUTTONS (1) AND SERVOMOTOR (5). HAND TIGHTEN USING FERRULE NUTS PROVIDED. SEE DETAIL A. NOTE: WHEN METERING VALVES ARE SPECIFIED, AIR LINES CONNECT DIRECTLY TO VALVE TIMER (7).

E- CONNECT 1/4" O.D. POLYETHYLENE WATER LINE (8) TO BUBBLER (2) AND COMPRESSION NUT (9). HAND TIGHTEN USING FERRULE NUTS PROVIDED.

NOTE:
MAXIMUM RECOMMENDED WORKING WATER PRESSURE IS 100 PSI; TEMPERATURE IS 130° F; OUTLET TEMPERATURE IS RECOMMENDED AT A MAXIMUM OF 105° F.

WARNING:
PRIOR TO MAKING INSTALLATION, SUPPLY LINES MUST BE FLUSHED OF ALL FOREIGN MATERIAL SUCH AS PIPE DOPE, CHIPS, SOLDER, ETC. VALVE MUST BE DRAINED PRIOR TO BEING SUBJECTED TO FREEZING TEMPERATURES. MAXIMUM RECOMMENDED OUTLET WATER TEMPERATURE IS 105° F.

F- AFTER THOROUGHLY FLUSHING THE SUPPLY LINES, MAKE-UP 1/2" NPS FEMALE SUPPLY CONNECTIONS. NOTE: SUPPLY INLET CONNECTION WILL ACCOMODATE 1/2" NPT MALE ADAPTER. THREAD FLEX CONNECTOR HOSE (10) TO CHECKSTOPS (11) AND TO SUPPLY STUB OUTS.

G- SEE APPROPRIATE SERVOMOTOR REFERENCE DRAWING FOR DETAILS AND TIMING INSRUCTIONS.

WALL SLEEVE **BOTH VIEWS ARE FROM CELL SIDE** **METAL TEMPLATE**

SHADED AREAS ARE REQUIRED WALL OPENINGS

WALL SLEEVE (-SW)

SLEEVES ARE INSTALLED IN FORMS (USING NAIL HOLES (1) PROVIDED) OR GROUTED INTO BLOCK WALLS, BECOMING A PERMANENT PART OF THE WALL.

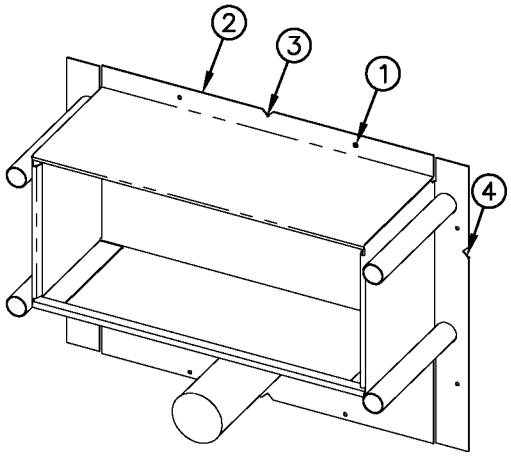
A. INSTALLED SLEEVE WITH FLANGE (2) ON CHASE SIDE OF WALL.

B. LOCATE TOP AND BOTTOM NOTCHES AT VERTICAL CENTERLINE (3) OF PLUMBING FIXTURE.

C. LOCATE SIDE NOTCHES (4) AT DIMENSIONS SHOWN, MEASURED FROM THE FINISHED FLOOR ON CELL (FIXTURE) SIDE. THIS WILL LOCATE DECK HEIGHT.

NOTES:

1. FOR POURED WALL CONSTRUCTION, TEMPORARY BRACING SHOULD BE INSTALLED WITHIN SLEEVE OPENING TO PREVENT DEFORMATION TO SLEEVE WHICH MAY OCCUR DURING POUR. DO NOT POUR CONCRETE DIRECTLY ON TOP OF WALL SLEEVE.
2. WHEN SLEEVES ARE NOT AVAILABLE BLOCKOUT FOR SLEEVE OPENING IN WALL PER DIMENSIONS SHOWN (5).



WALL SLEEVE
(-SW)

METAL TEMPLATE (-MT)

TEMPLATES ARE USED TO LAYOUT REQUIRED WALL OPENINGS FOR SUBSEQUENT FLAME CUTTING OR CORE DRILLING.

A. STRIKE A HORIZONTAL CHALK LINE (4) ON WALL AT DIMENSION SHOWN, MEASURED FROM THE FINISHED FLOOR ON CELL (FIXTURE) SIDE. THIS WILL LOCATE CENTERLINE FOR HORIZONTAL NOTCHES ON TEMPLATE.

B. STRIKE A VERTICAL CHALK LINE (3) ON THE WALL TO INDICATE CENTERLINE OF FIXTURE. THIS WILL LOCATE CENTERLINE FOR VERTICAL NOTCHES ON TEMPLATE.

C. PLACE TEMPLATE AGAINST WALL. LOCATE NOTCHES ALONG CHALK LINES, MARK WALL FOR REQUIRED OPENINGS.

INSTALLATION INSTRUCTIONS:

A– MOUNT FIXTURE IN ACCORDANCE TO MANUFACTURER'S INSTALLATION INSTRUCTIONS.

B– ASSEMBLE SPOUTS AND PUSHBUTTONS TO FIXTURE.

C– CONNECT 1/8" O.D. POLYETHYLENE AIR LINE ① TO PUSHBUTTON ②, AND VALVE TIMER ASSEMBLY ③ SEE DETAIL "A". NOTE: FOR DIRECT ACTING: ASSEMBLE TO AIR PORT ④, SEE DETAIL "B". HAND TIGHTEN FERRULE NUT ⑤ PROVIDED.

D– CONNECT 1/4" O.D. POLYETHYLENE WATER LINES ⑥ TO VALVE ASSEMBLY ELBOW ⑦ SEE DETAILS "C", AND "D". HAND TIGHTEN FERRULE NUT ⑧ PROVIDED.

E– AFTER THOROUGHLY FLUSHING SUPPLY LINES MAKE UP CONNECTIONS TO VALVE ASSEMBLY INLET(S) 1/2" NPTE OR 1/2" NPS FLEX HOSE AS REQUIRED.

NOTE:

1) ALL TUBING SHOULD BE CUT SQUARE AND BE FREE OF BURRS OR DEFORMITIES TO ENSURE A WATER TIGHT CONNECTION.
2) EXTEND TUBING AT LEAST 1/4" BEYOND FERRULE NUT BEFORE INSERTING TUBING INTO CONNECTION OPENING BEFORE TIGHTENING.
3) TUBING SHOULD BE FREE OF KINKS FOR PROPER OPERATION
4) MAXIMUM RECOMMENDED WORKING WATER PRESSURE IS 100 PSI; TEMPERATURE IS 130° F; OUTLET TEMPERATURE IS RECOMMENDED AT A MAXIMUM OF 105° F.

WARNING:
PRIOR TO MAKING INSTALLATION, SUPPLY LINES MUST BE FLUSHED OF ALL FOREIGN MATERIAL SUCH AS PIPE DOPE, CHIPS, SOLDER, ETC. VALVE MUST BE DRAINED PRIOR TO BEING SUBJECTED TO FREEZING TEMPERATURES. MAXIMUM RECOMMENDED OUTLET WATER TEMPERATURE IS 105° F.

LUCERNE™ WALL-HUNG LAVATORY

- Wall-hung sink
- Vitreous china
- Front overflow
- D-shaped bowl
- Self-draining deck area with contoured back and side splash shields
- Faucet ledge
- Compliant with Texas accessibility standard (TAS) for children age group 13 and up

Faucet holes on 203mm (8") centers (Illus.):

❑ **0356.028** For exposed bracket support
Shown with 4801.862 Amarilis Heritage faucet with Triune Cross handles (not included)

❑ **0356.015** For wall hanger (included) or concealed arms support

❑ **0356.915** For wall hanger (included) or concealed arms support
- Less overflow

Faucet holes on 102mm (4") centers:

❑ **0355.027** For exposed bracket support

❑ **0355.012** For wall hanger (included) or concealed arms support

❑ **0355.912** For wall hanger (included) or concealed arms support
- Less overflow

Single center faucet hole (Illus.):

❑ **0356.041** For exposed bracket support
Shown with 1340.000 metering faucet (not included)

❑ **0356.421** For wall hanger (included) or concealed arms support

❑ **0356.921** For wall hanger (included) or concealed arms support
- Less overflow

❑ **0356.439** For wall hanger (included) or concealed arms support
- Single faucet hole on right

❑ **0356.066** For exposed bracket support
- Single faucet hole on right

Nominal Dimensions:
521 x 464mm
(20-1/2" x 18-1/4")

Bowl sizes:
381mm (15") wide
254mm (10") front to back
165mm (6-1/2") deep

Compliance Certifications -
Meets or Exceeds the Following Specifications:
- ASME A112.19.2 / CSA B45.1 for Vitreous China Fixtures

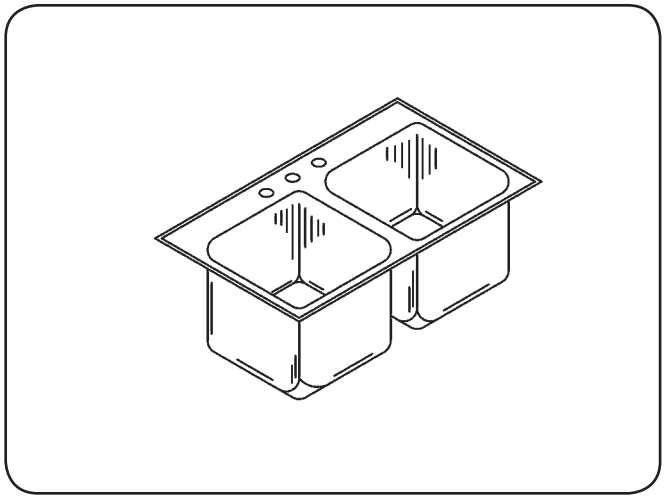
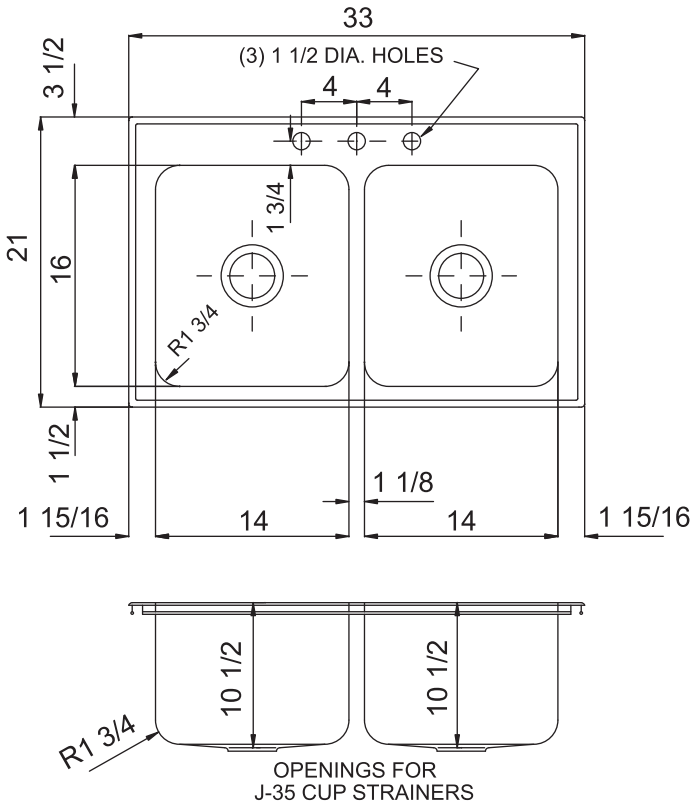
18 GAUGE

SUBMITTAL DATA





SPECIFICATION

Seamless die-drawn construction of 18 gauge type 304, 18-8 stainless steel. Interior and top surfaces polished to a non-porous Hand-Blended Just Finish with highlighted bowl rim. Fully coated underside insulates for sound, and reduces condensation. Maximum capacity straight-sided compartment with 1 3/4" radius corners provides greater capacity. Self-rimming top mount Grip-Rim Plus with stainless steel mounting channels. Conforms to ASME/ANSI A112.19.3M. Drain punch #35 centered for Just J-35 unless otherwise specified.

☐ **TYPE 316 STAINLESS STEEL** (Check if applicable)

19.80 Gallon Capacity

Capacity Matters
Max ID sizing with straight sided bowl configuration (non tapered sides). Tight corner radius design.

FIAT PRODUCTS

TERRAZZO MOP SERVICE BASIN 12" DEPTH WITH 6" DROP FRONT

12" MOP SERVICE BASIN WITH 6" DROP FRONT

- One piece, precast terrazzo made of black and white marble chips in gray portland cement to produce a compressive strength not less than 3000 P.S.I. seven days after casting.
- Terrazzo surface shall be ground and polished with all air holes or pits grouted and excess removed.
- Shoulders shall be not less than 12" high outside and 10" inside at lowest wall. Shoulder width not less than 2” on all sides with a 1/4" pitch towards the inside.
- Standard drain body is stainless steel cast integrally and provides for a caulked lead connection not less than 1" deep to a 3" pipe.
- Stainless steel strainer # 1453BB

Options

- QDC quick drain connectors
- Integral galvanized tiling flanges available at no additional charge.
- Stainless steel tiling flanges available with up-charge. Must be custom order.
- Chrome plated brass drain or Vandal proof drain. Must be custom order.

❑ **TSBC1610, TSBC1611, TSBC1612 Neo-corner Series** with stainless steel caps on thresholds only

❑ **TSB3000, TSB3001, TSB3002, TSB3003 Series** with stainless steel caps on all curbs

❑ **TSB3010, TSB3011, TSB3012, TSB3013 Series** with stainless steel caps on thresholds only

Optional Components:

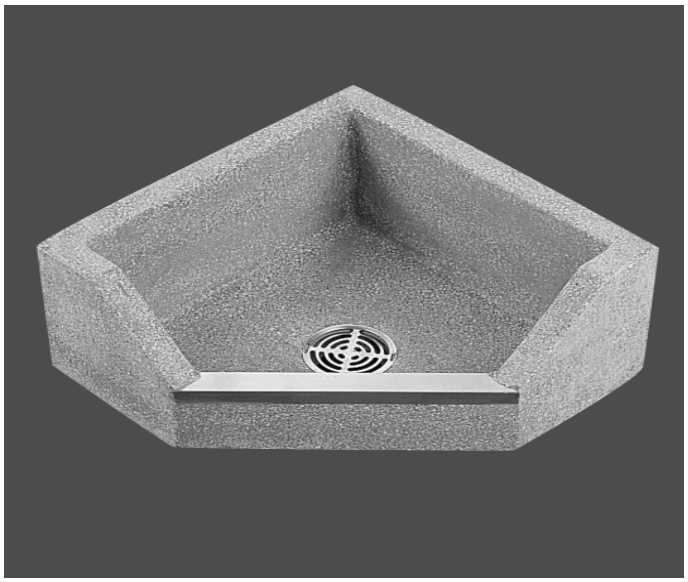
❑ **830AA** Mop Service Basin Fitting

❑ **832AA** Hose & Hose Bracket

❑ **1239BB** Aluminum Bumperguard with Vinyl Insert

❑ **833AA** Silicone Sealant

❑ **MSG** Wall Guards - Stainless Steel
- Wall Guards are manufactured of heavy gauge stainless steel and help protect walls adjacent to Mop Basin. Two panels are required for corner installations. Optional third panel is required for a recessed installation. (MSG2424; MSG2828; MSG3232; MSG3624; MSG3636)



Shown: TSBC1610

SEE REVERSE FOR ROUGHING-IN DIMENSIONS

NOTES: Terrazzo Mop Basins **must** be installed on a 1/2" layer of mortar in order that the mop basin be level and to prevent cracking. Failure to install terrazzo without a mortar bed will void the warranty. Installations require a 1⁄4" clearance between mop basin and wall.

MECHANICAL FAUCETS

897-CP

Manual Faucets

Product Type

Wall Mounted 8" Body, Adjustable Arms 7-5/8" - 8-3/8" Hot and Cold Water Sink Faucet

Features & Specifications

- 8" Body, Adjustable Arms 7-5/8" - 8-3/8"
- 2-3/8" Vandal Proof Lever Handle
- Ceramic 1/4 Turn Operating Cartridge
- 1/2" NPT Adjustable Female Union Nut Supply Arms
- 3/4" Male Hose Thread Outlet
- Integral Stop Valves for Servicing the product
- Atmospheric Vacuum Breaker, Not Intended for Continuous Pressure Applications
- Vacuum Breaker Spout with Pail Hook and Wall Brace
- Atmospheric Vacuum Breaker, Not Intended for Continuous Pressure Applications
- CFNow! Item Ships in 3 Days

Performance Specification

- Rated Operating Pressure: 20-125 PSI
- Rated Operating Temperature: 40-140ºF

Warranty

- Lifetime Limited Faucet Warranty
- 5-Year Limited Cartridge Warranty
- 1-Year Limited Finish Warranty

Codes & Standards

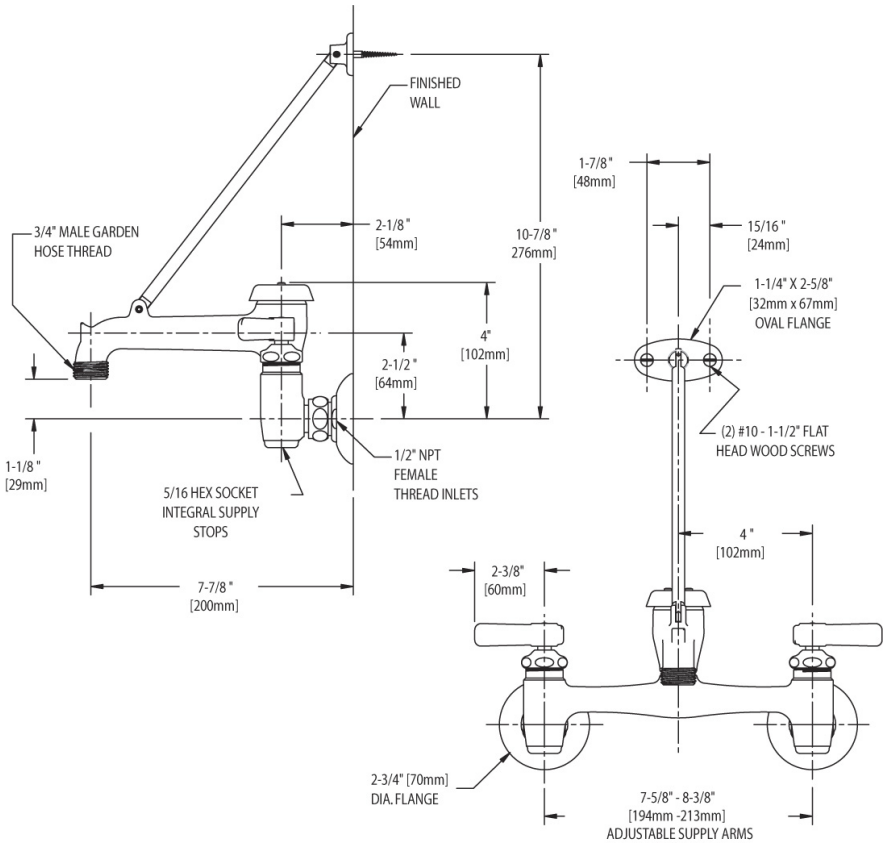
897-CP

Manual Faucets

Architect/Engineer Specification

Chicago Faucets No. 897-CP, Sink Faucet for hot and cold water, wall-mounted with 7-5/8" - 8-3/8" adjustable centers. Chrome plated. Vacuum breaker spout with pail hook and wall brace. 2-3/8" metal, vandal-proof, lever handles with sixteen-point, tapered broach and secured blue and red index buttons. Ceramic cartridges, open and close in 90 degrees, features square, tapered stem. Adjustable supply arms include 1/2" NPT female union nut. 3/4" male hose thread outlet. Integral stop valves for servicing the faucet. NOTE: Atmospheric vacuum breaker is NOT intended for continuous pressure applications.



Operation and Maintenance

Installation should be in accordance with local plumbing codes. Flush all pipes thoroughly before installation. After installation, remove spout outlet or flow control and flush faucet thoroughly to clear any debris. Care should be taken when cleaning the product. Do not use abrasive cleaners, chemicals or solvents as they can result in surface damage. Use mild soap and warm water for cleaning and protecting the life of Chicago Faucet products. For specific operation and maintenance refer to the installation instructions and repair parts documents that are located at www.chicagofaucets.com.

Chicago Faucets, member of the Geberit Group, is the leading brand of commercial faucets and fittings in the United States, offering a complete range of products for schools, laboratories, hospitals, office buildings, food service, airports and sport facilities. Call 1.800.TECTRUE or 1.847.803.5000 Option 1 for installation or other technical assistance.

model 1117L

Barrier-Free Dual Wall Mount Fountain

FEATURES & BENEFITS

CONSTRUCTION

One-piece stamped basin with low-profile design made of 14 gauge Type 304 stainless steel with integral 1/4" (.6 cm) mounting plate, and vandal-resistant bottom plate. Satin finish resists stains and corrosion.

INTEGRATED TRAP

Brass 1-1/4" NPT trap is internally mounted for easy installation and access.

QUALITY CONTROL

Both fountains are pre-built and fully water and pressure tested to ensure proper functionality.

BACK PANEL

Stainless steel back panel helps to protect the wall from inadvertent splashing, and its decorative satin finish increases location visibility and completes the fountains attractive appearance.

BARRIER-FREE CONFIGURABLE

Supplied with a low profile bowl, individual adjustable panels, and multiple mounting positions, this fountain can be configured for adult and child ADA considerations.

BUBBLER HEAD

Polished chrome-plated brass bubbler head with integral basin shank for added strength. Shielded, angled stream opening provides a steady, sanitary source of drinking water at .45 gpm.

PUSH BUTTON VALVE

The push-button activated valve has an all stainless steel body, with chrome plated brass push button assembly which allows for front access to water stream adjustment, water control cartridge, and water supply strainer replacement without having to go through the bottom plate. Operating pressure range of 30 to 90 psi (2.1 to 6.2 bar).

OPTIONS

- ☐ Remote Drinking Fountain Water chiller: Model HCR8, 8 gph (30.3 L) remote water chiller provides instantaneous cooling to meet a continuous demand for chilled water.
- ☐ Bottle Filler: Model 1920, bottle filler can be a stand-alone station, or mounted above Haws 1001, 1011, 1107L, 1109, 1117L, and 1119 series drinking fountain models.
- ☐ Back Panel: Model BP32, satin finish stainless steel 32" back panel for model 1920 bottle filler.
- ☐ Water Filter: Model 6426, 10" x 2" (25.4 x 5.1 cm), in-line lead removal element that reduces lead from incoming water supply.

For more information, visit www.hawsco.com or call (888) 640-4297.

SPECIFICATIONS

Model 1117L low profile "Hi-Lo" wall mounted barrier-free drinking fountain shall include dual 14 gauge Type 304 Stainless Steel satin finish basins with integral 1/4" (.6 cm) stainless steel mounting plates. Push-button operated stainless steel valves with front-accessible cartridge and flow adjustment provide 100% lead free waterways, polished chrome-plated brass vandal-resistant bubbler heads, polished chrome-plated brass vandal-resistant waste strainers, vandal-resistant bottom plates, stainless steel satin finish back panel, adjustable mounting allowing either basin high or low, in-wall mounting plate, and 1-1/4" NPT integral traps. The patented design allows the unit to be mounted to meet ADA or Child ADA specifications. REQUIRES MODEL 6717 PRICED SEPARATELY.

APPLICATIONS

Perfect for either public or private indoor/outdoor settings, Model 1117L is a great fit in areas where aesthetics are important to the overall appeal of the architecture. This series is precisely mounted, making it a nice addition to any surrounding. Beautiful satin finish helps to maintain the fountains overall appeal so it always remains looking as new as it did when it was installed. Specifically, this type of wall mounted drinking fountain may be placed in settings such as: schools and other locations in and around office buildings where the temperature remains above freezing.Model meets all current Federal Regulations for the disabled including those in the Americans with Disabilities Act. Haws manufactures drinking fountains and electric water coolers to be lead-free by all known definitions including NSF/ANSI Standard 61, Section 9, NSF/ANSI 372, California Proposition 65, and the Federal Safe Drinking Water Act. Product is compliant to California Health and Safety Code 116875 (AB 1953-2006).

DISCLAIMER: Continued product improvements make specifications subject to change without notice. Check www.hawsco.com for the latest product information and updates.

NLS LIGHTING

VUE-3

FULL CUTOFF SITE LIGHTING

FORM AND FUNCTION
- Sleek, low profile housing
- Dark Sky Compliant, Full Cutoff
- Engineered for optimum thermal management
- Low depreciation rate
- Reduces energy consumption and costs up to 65%
- Exceeds IES foot candle levels utilizing the least number of poles and fixtures per project
- Optical system designed for Parking Lots, Auto Dealerships, Municipalities, Tennis Courts, Field Lighting

CONSTRUCTION
- Aluminum
- External cooling fins, Finite Element Analysis (FEA) designed
- Corrosion resistant external hardware

FINISH
- 3-5 mils electrostatic powder coat.
- NLS' standard high-quality finishes prevent corrosion protects against and extreme environmental conditions

WARRANTY
Five-year limited warranty for drivers and LEDs.

LISTINGS
- Certified to UL 1598
- UL 8750
- CSA C22.2 No. 250.0
- DesignLights Consortium® (DLC)
- DesignLights Consortium® Premium (DLCP)

NLS LIGHTING

SLS / VUE - 4

SLS - SPORTS LIGHTING SOLUTIONS

FORM AND FUNCTION

- Sleek, low profile housing
- Dark Sky Compliant, Full Cutoff
- Engineered for optimum thermal management
- Low depreciation rate: L70 = 360,000 Hours
- Reduces energy consumption and costs up to 65%
- Exceeds IES foot candle levels utilizing the least number of poles and fixtures per project
- Optical system designed specifically for Sports Field Lighting

RELIABILITY

- 30 Year Solution
- L70 360,000 Hours
- 10KV Surge Protector standard

VUE - 4 SPORTS LIGHTING FIXTURE WITH INTEGRAL DRIVERS

A robust Sports Lighting Fixture designed for Parks and Recreational Facilities. Up to 850 watts, utilizing patented Star Power™ Optical System creating unmatched reliability.

SPECIALIZING IN PARKS AND RECREATIONAL FACILITIES

NLS Sports Lighting Solutions - an elite combination of performance, glare control and reliability. From young children to competitive athletes the NLS SLS is the perfect solution for competitors who strive to perform at their highest level.

PERFORMANCE

The Vue features NLS patented Star Power™ Optical System designed to create high, broad, uniform horizontal foot candle levels and also provide substantial vertical foot candles, so the ball is never lost from player view.

GLARE CONTROL

The Star Power™ Optical System is endorsed by the Founder of the International Dark Sky Association and Illuminating Engineer Society Sports Lighting Committee Associate as one of the best optical systems in glare reduction for dark sky, neighbors, and the sports application itself. Meets IES parks and recreation requirements.

VUE - 4 standard with (FSS) front side shield.

CONSTRUCTION
- Precision Die Formed aluminum housing for durability and consistency
- Stainless Steel corrosion resistant external hardware
- One-piece silicone gasket ensures IP-65 seal for electronics compartment

ELECTRICAL
- 120-277 Volts (UNV) or 347-480 Volts (HV)
- 0-10V dimming driver by Philips Advance
- Driver power factor at maximum load is ≥ .95, THD maximum load is 15%
- All internal wiring UL certified for 600 VAC and 105°C
- All drivers, controls, and sensors housed in enclosed IP-65 compartment

PATENTED OPTICAL SYSTEM
- SLS optical system features a patented soft athlete friendly high wattage low glare linear diffused optic, providing a wide distribution and uniform lighting from every fixture
- SLS optical system significantly reduces disability glare specifically for fifty to eighty feet mounting heights compared to competition

L70 DEPRECIATION
360,000 Hours (@77°F/ 25°C)

KELVIN
5700K

FINISH
3-5 mils electrostatic powder coat.
NLS' standard high-quality finishes prevent corrosion protects against and extreme environmental conditions.
Graphite (GPH) grey as standard finish.

MOUNTING
Stainless Steel Trunnion Mount
- Fast accurate installation with Pre-Aimed, Pre-Wired Cross Arm assemblies

OPTIONS
MARINE GRADE FINISH (MGF)—A multi-step process creating protective finishing coat against harsh environments
- Chemically washed in a 5 stage cleaning system.
- Pre-baked
- Powder coated 3-5 mils of Zinc Rich Super Durable Polyester Primer
- Oven Baked
- Finished Powder Coating of Super Durable Polyester Powder Coat 3-5 mil thickness

PHOTOCELL + RECEPTACLE (PCR)

NEMA 7 PIN RECEPTACLE (7PIN)—An ANSI C136.41-2013 receptacle provides electrical and mechanical interconnection between photo control cell and luminaire. Dimming receptacle available two or four dimming contacts supports 0-10 VDC dimming methods or Digital Addressable Lighting Interface (DALI), providing reliable power interconnect.

WIRELESS CONTROL SYSTEM (WCS)—Consult Factory for options

WARRANTY
Five-year standard warranty

SPECIFICATIONS

Housing:

- Low copper aluminum alloy die-casting is designed as one-piece with internal cooling fins.
- Solid, cast aluminum wall creates a thermal barrier between the optical and electrical compartments.
- Molded silicone gasket throughout insures the sealing between the two compartments and provides ingress protection.
- Housing is designed with integral LED heat sink utilized for thermal transfer and for securing the location of each LED module.
- IK09 rated enclosure protects electrical equipment against external mechanical impacts.

Lens Frame:

- One-piece low copper aluminum alloy die-cast is secured to housing with 6 screws.

Backlight Control

- Optional Backlight Control on each LED module to completely control unwanted backlight.

Lens

One-piece flat glass lens slips secure with clips. Extra silicone gasketing is provided to retain a clear optical compartment.

Optical Module:

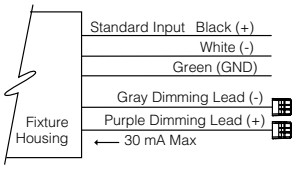
- LEDs shall be mounted to a metal printed circuit board assembly (MCPCB).
- Optical lenses shall be clear injection molded PMMA acrylic.
- Each MCPCB and optic shall be sealed to the diecast housing and sealed with a continuous one piece injection molded silicone rubber gasket.
- Patent Pending design of optical array shall independently shield each LED optic across the length of the aperture.
- Optional fixture finish optical surfaces shall not exceed BUG ratings of the standard white finish and shall be greater than or equal to the delivered lumens of the optional matte black optical surface finish.

Electrical Components

- Standard programmable driver allows for programmable drive current settings.
- Electrical components are stategically located in the driver gear compartment with a molded silicon grommet seal to provide separation from the optical chamber.
- Maximum lightning surge current 20KA with thermally protected varistor technology. Surge suppression is series circuited preventing total fixture failure. ANSI/IEEE C62.41 Category C High.
- Open circuit fault will turn off the luminaire in order to protect the sensitive electronics and acts as a signal for maintenance.
- Programmable Driver is rated for -40°C starting.
- "Thermal Shield", primary side, thermister provides protection for the sustainable life of electronic components.

Dimming:

- Dimming range from 100% to 10% through the use of the standard 0-10V interface on the programmable driver.
- Modular wiring harness in the service area provides user access to the dimming circuitry.
- Dimming circuitry compatible with 0-10V, user-defined control devices.
- Optional factory programmed dimming profile.



Fusing:

SF for 120, 277, and 347 Line volts

DF for 208, 240, and 480 Line volts

Hight temperature fuse holders factory installed inside the fixture housing.

Fuse is included.

Finish:

Fade and abrasion resistant, electrostatically applied, thermally cured, triglycidal isocyanurate (TGIC) polyester powdercoat.

Standard colors include (BL) Black, (DB) Dark Bronze, (GT) Graphite, (PS) Platinum Silver, (LG) Light Gray, (TT) Titanium, (WH) White, and (CC) Custom Color (Include RAL#).

Certifications and Listings:

- IUL 1598 Standard for Luminaires.
- IUL 8750 Standard for Safety for Light
- IEmitting Diode (LED) Equipment for use in Lighting Products.
- ICSA C22.2#250.0 Luminaires.
- ANSI C136.31-2010 Vibration tested and compliant 3.0 G Test Level 2 – Bridge/Overpass Applications
- IIP66 rated luminaire.
- IRoHS compliant.
- IIP66 rated.
- IIEC 66262 Mechanical Impact Code IK09.
- IDA approved, 3000K and warmer CCTs only.

CAUTION:

Fixtures must be grounded in accordance with national, state and/or local electrical codes. Failure to do so may result in serious personal injury.

WARRANTY:

For full warranty see: http://www.hubbelllighting.com/resources/warranty

CONTROLS

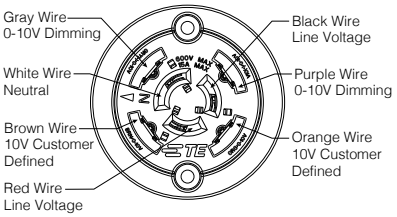
Photocell Receptacle

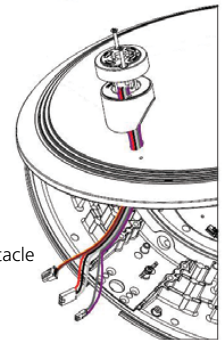
7PR

Fully gasketed and wired 7-pin receptacle option. Easy access location above the electrical compartment. 7-pin construction allows for a user-defined interface and provides a controlled definition of operational performance. ANSI twist-lock control module by-others.

Standard customer operation modes:

1. Traditional on/off photoelectric control.
2. 5-pin wireless photoelectric control for added dimming feature.
3. 7-pin wireless photoelectric control for dimming and additional I/O connections for customer use.





7-Pin receptacle placement

Wireless Controls

wiSCAPE™

Hubbell Control Solution's wiSCAPE™ On-Fixture Module is a bi-directional wireless RF device that allows an individual fixture to be managed, monitored and metered. The wiSCAPE In-Fixture Module communicates wirelessly over a robust 2.4GHz ISM (Industrial, Scientific and Medical) certified meshed radio signal. The wiSCAPE Fixture Module drastically simplifies control and automation of projects, especially in retrofit environments, and challenges the legacy world of wired-systems. wiSCAPE wireless control technology easily adapts to complex automation situations for quick, simple and economical commissioning. The On-Fixture Module is compatible with 7PR option.

SiteSync™[1]

SiteSync™ wireless control system for reduction in energy and maintenance cost while optimizing light quality 24/7. See ordering information or visit www.hubbelllighting.com/products/sitesync for more details.

Pole Mounted

Round Pole-Mounted Occupancy Sensor up to 16'

SCL-R

Round Pole-Mounted Occupancy Sensor up to 16' - an outdoor occupancy sensor with 0-10V interface dimming control that mounts directly to the pole. Wide 360° pattern. Module colors are available in Black, Gray, and White. Module is cut for round pole mounting. Pole diameter is needed upon order. Poles to be drilled in the field will be provided with installation instructions.

Ordering Example: SCL-R44/277[2]/BL[3]

Square Pole-Mounted Occupancy Sensor up to 16'

SCL-S

Square Pole-Mounted Occupancy Sensor up to 16' - an outdoor occupancy sensor with 0-10V interface dimming control that mounts directly to the pole. Wide 360° pattern. Module colors are available in Black, Gray, and White. Module is cut for square pole mounting. Pole diameter is needed upon order. Poles to be drilled in the field will be provided with installation instructions.

Ordering Example: SCL-L/277[2]/BL[3]

Round Pole-Mounted Occupancy Sensor 16' to 30'

SCH-R

Round Pole-Mounted Occupancy Sensor: 16' to 30' - an outdoor occupancy sensor with 0-10V interface dimming control that mounts directly to the pole. Wide 360° pattern. Module colors are available in Black, Gray, and White. Module is cut for round pole mounting. Pole diameter is needed upon order. Poles to be drilled in the field will be provided with installation instructions.

Ordering Example: SCH-R4[4]/277[2]/BL[3]

Square Pole-Mounted Occupancy Sensor 16' to 30'

SCH-S

Square Pole-Mounted Occupancy Sensor: 16 to 30' - an outdoor occupancy sensor with 0-10V interface dimming control that mounts directly to the pole. Wide 360° pattern. Module colors are available in Black, Gray, and White. Module is cut for round pole mounting. Pole diameter is needed upon order. Poles to be drilled in the field will be provided with installation instructions.

Ordering Example: SCH-S/277[2]/BL[3]

AstroDIM

AstroDIM provides multi-stage night-time power reduction based on an internal timer referenced to the power on/off time. There is no need for an external control infrastructure. The unit automatically performs a dimming profile based on the predefined scheduled reference to the midpoint, which is calculated based on the power on/off times.

[1]PRECOMMISSIONED SITESYNC ORDERING INFORMATION: When ordering a fixture with the SiteSync lighting control option, additional information will be required to complete the order. The SiteSync Commissioning Form or alternate schedule information must be completed. This form includes Project location, Group information, and Operating schedules. For more detailed information please visit www.HubbellLighting.com/products/sitesync or contact Hubbell Lighting tech support at (800) 345-4928.

SiteSync fixtures with occupancy sensor (SWPM) require the mounting height of the fixture for selection of the lens.

Examples:

SiteSync only : UR20/56L-75/3K7/UNV/ASQ/BL/SWP

SiteSync with Motion Control: UR20/56L-75/3K7/UNV/ASQ/BL/SWPM-40F

[2]Voltage, [3]Color, [4]Pole Diameter,

LTRA
Round Aluminum Tapered Pole
revision 10/8/15 • kl_ltra_spec.pdf

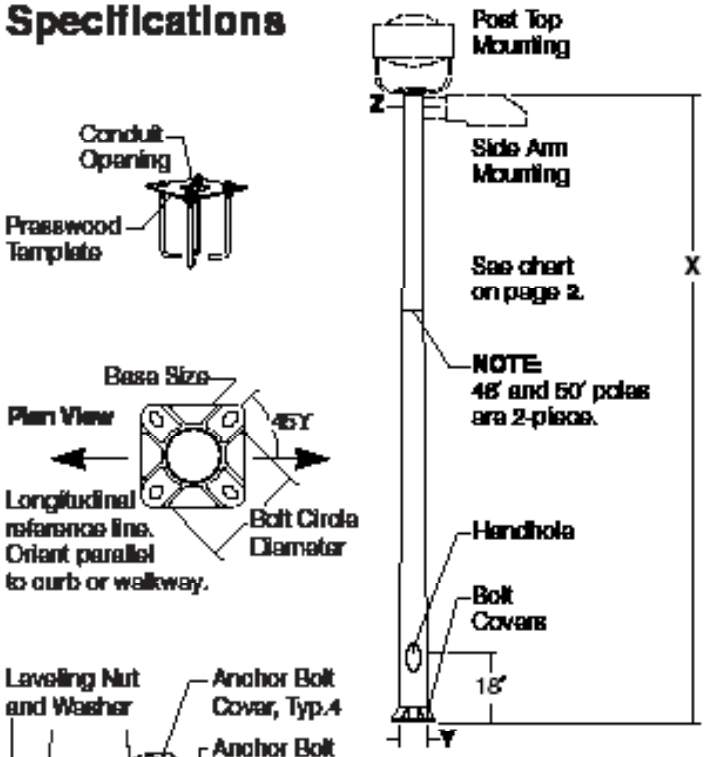
Type:
Job:
Catalog number:

	/	/	/
Pole	Mounting	Structural Luminaire Option	Finish
See page 2		See page 3	

Approvals:

Date:
Page: 1 of 4

Specifications



Pole Construction: Tapered by spinning and coldworking a seamless one-piece extruded tube of aluminum alloy 6063-T4. After tapering, shaft is welded to a cast aluminum anchor base of alloy A356, heat-treated to T-6 temper, and rotary sand finished. Poles above 39' include a flush field joint approximately 26½' above base, with both sections taper spun.

Bolt Covers: Cast aluminum anchor bolt covers included.

Pole Cap: A flush-sided cast aluminum pole cap is provided for side arm mounted luminaires.

Handhole: Reinforced handhole with a gasketed cover and grounding provisions provided, 18" up from base. Cover mounts flush.

Anchor Bolts: Four galvanized anchor bolts provided, complete with eight nuts, eight flat washers, and a pressewood template.

Vibration Dampener: Poles 20' and above include a mechanically fastened internal pendulum vibration dampener.

Strength: Poles will withstand wind loads as listed in chart (see page 2) when luminaires are mounted per fixture installation instructions.

Finish: Super TGIC thermoset polyester powder coat paint applied over a titanated zirconium conversion coating. Standard colors are Black, Dark Bronze, Light Gray, Graphite Platinum Silver, Titanium and White. Custom colors are available.

CAUTION: Installation of poles without luminaire(s) will compromise pole strength. Any accessories attached to pole, or other modifications will compromise pole strength and may result in pole failure.

Maintenance: A regularly scheduled maintenance program must be established to insure the protective paint coating is intact, corrosion or structural damage has not occurred, and anchor bolt nuts are tight. Failure to do so could lead to pole collapse and serious personal injury.

Certification: Certified UL 1598 in accordance with Article 410 of ANSI NFPA 70, National Electrical Code. Complies with the CSA standard. Note: If a UL or CSA label is required, a request must be made at time of order.

© 2015 KIM LIGHTING • 10555 EAST GALE AVENUE, CITY OF INDUSTRY, CA 91745-1788 • TEL: 626/968-5666 • FAX: 626/968-5716

Standard Features

NOTE: All allowable pole and fixture EPAs are derived from the AASHTO standard. Responsibility lies with the specifier for correct pole selection based on local codes and standards for the job location. (See page 4).

Wind Map

United States and Canada

To obtain more information on AASHTO Standards for Lighting Equipment contact:

American Association of State Highway and Transportation Officials:
444 N. Capitol Street, NW,
Suite 249
Washington, DC 20001
(202) 624-5800
www.aashto.org

NOTES:

- Values are based on 50 year mean recurrence interval 30' above grade.
- Hawaii has an 105 mph wind velocity.
- Puerto Rico has a 128 mph wind velocity.
- Caution must be exercised in determining wind velocities in special wind areas such as:

  Mountainous Regions

  Areas surrounding the Great Lakes or other large bodies of water or open land.

  Areas subject to extreme wind conditions, such as hurricanes, typhoons, cyclones, and tornadoes.

  Areas adjacent to airports.

  Any specific area with a known or suspected abnormally high intermittent wind condition caused by geography, adjacent structures, or other specific local conditions that may not be recorded in National Weather Service records.
- Allowable pole EPA for jobsite wind conditions must be equal to or greater than fixture EPA. Responsibility lies with the specifier for correct pole selection based on AASHTO wind map and job location.
- The Wind Map is intended only as a general guide. Always consult local authorities to determine maximum wind velocities, gusting and unique wind conditions for each specific application.
- **CAUTION:** Wind speeds and listed EPAs are for ground mounted installations. Poles mounted on structures (such as bridges and buildings) must consider vibration and coefficient of height factors beyond this general guide. Consult AASHTO standards.
- Extreme Wind Events: Hurricanes, Typhoons, Cyclones, or Tornadoes expose poles to flying debris, wind shear, and other unpredictable aerodynamic forces not indicated by the wind velocity ratings.
- Pole Strength Limited Warranty: Standard, unmodified Kim lighting Poles installed as recommended, undamaged by corrosion, or lack of maintenance, shall withstand steady wind conditions as provided on page 2 (Allowable Pole EPA). Installation of poles without luminaires, or attachment of any unauthorized accessories to poles shall void this warranty.

Application
LED performance floodlights with 1/2" I.P.S. nipple for mounting to BEGA mounting accessories and wide beam light distribution designed for use in illuminating landscaping, facades, flag poles, trees and signage.

Materials
Luminaire housing and canopy constructed of die-cast marine grade, copper free (≤ 0.3% copper content) A360.0 aluminum alloy
1/2" I.P.S. threaded nipple constructed of 316 grade stainless steel
Clear safety glass
Reflector surface made of pure anodized aluminum
Silicone optical collimating lens
Silicone applied robotically to casting, plasma treated for increased adhesion
High temperature silicone gasket
Mechanically captive stainless steel fasteners

NRTL listed to North American Standards, suitable for wet locations
Protection class IP 65
Effective projection area: 0.3 sq. ft.
Weight: 5.3 lbs

Electrical

Operating voltage	120-277V AC
Minimum start temperature	-30° C
LED module wattage	37.5 W
System wattage	42.0 W
Controllability	0-10V dimmable
Color rendering index	Ra > 90
Luminaire lumens	3,916 lumens (4000K)
Lifetime at Ta = 15° C	320,000 h (L70)
Lifetime at Ta = 30° C	220,000 h (L70)

LED color temperature

☐ 4000K - Product number + **K4**
☐ 3500K - Product number + **K35**
☐ 3000K - Product number + **K3**
☐ 2700K - Product number + **K27**

BEGA can supply you with suitable LED replacement modules for up to 20 years after the purchase of LED luminaires - see website for details

Finish
All BEGA standard finishes are matte, textured polyester powder coat with minimum 3 mil thickness.

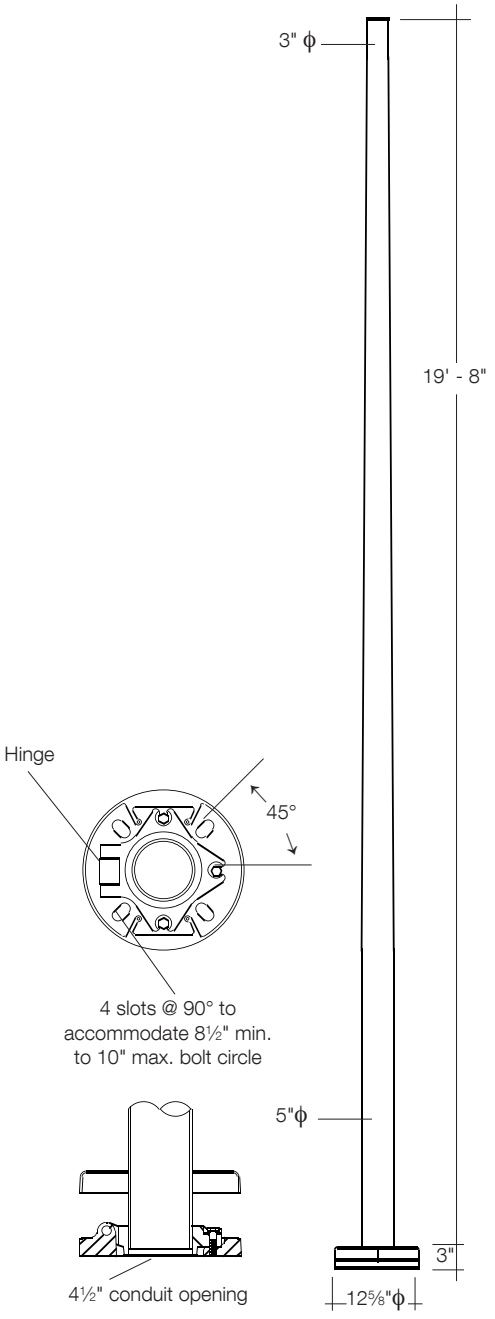
Approval:



1908HR 3" - 5" Tapered round hinged pole

Shaft: Extruded from all new seamless 6063 aluminum alloy tubing, heat treated to a T-6 condition.

Anchor base: Round cast aluminum A356 alloy, heat treated to a T-6 condition. Anchor base and shaft continuously welded at the outside top and inside bottom of the anchor base casting. Pole base to be round hinged two piece casting. Hinge Pole shaft to be welded to upper base casting which is secured to lower base casting by three (3) stainless steel bolts. Bolts to be fastened to cast-in stainless threaded inserts in lower casting. Cast round two piece base cover supplied with pole.

Anchor bolts: Four (4) ¾" x 17" galvanized steel anchor bolts supplied with double nuts and flat washers. Maximum bolt projection 3½". For luminaires requiring threaded inserts and pole cap -specify: 1D (single); 2D (2@ 180°); 3D (3 @ 120°).

GCO or GFI: Standard GCO/GFI location is opposite the hinge. Height above base for ballast in luminaires is 18". For single luminaires with a pole base mounted (PBM) ballast the minimum height is 24" and 42" minimum for double PBM luminaires.

Weight: 87.0 lbs.

Disclaimer

BEGA-US warrants the specific anchor bolts and pole combination according to the product number(s) and description(s) indicated on this submittal sheet. Structural changes to the pole requested by the customer, including changes to pole length, may affect the compatibility of the anchor bolts and corresponding poles. BEGA-US is not responsible for the incompatibility of the anchor bolts and poles resulting from such structural changes without review by the BEGA-US engineering department. This includes, but is not limited to, any labor charges, charges for replacement materials and shipping.

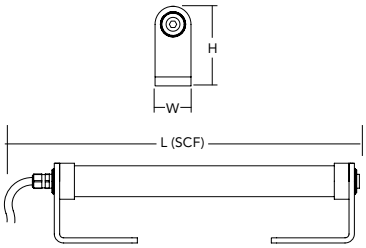
	A6	6-7/8" (175mm)
	A9	9-7/8" (251mm)



DESCRIPTION

The W6300 series is designed to be the most powerful, reliable, and easiest to implement linear submersible solution available. The W6300 is suitable for installation up to 9 feet (3m) deep in fountains and other water containing vessels not intended to accommodate the partial or complete immersion of persons. The W6300 utilizes Nichia white LEDs in five standard color temperatures and operates on 24VAC using magnetic transformers which can be dimmed with commonly available low voltage magnetic dimming equipment. Available in two beam spreads, narrow flood (30°) and very wide flood (140°), with an unique 1-piece adjustable mount allowing for 360 degree rotation.

ORDERING INFORMATION

EXAMPLE: W6312 LED 30MA 27K 24 NFL A3 SCF CSL10 LP

Series		Source		Drive Current		Color Temperature		Voltage		Distribution	
W6312	Submersible, Linear - 12"	**LED**	LED light source	**30MA**	30mA rms current	**27K**	2700K CCT	**24**	24 Volt ac	**NFL**	Narrow Flood
W6318	Submersible, Linear - 18"			**60MA**	60mA rms current	**30K**	3000K CCT			**VWFL**	Very Wide Flood
W6324	Submersible, Linear - 24"			**120MA**	120mA rms current	**35K**	3500K CCT				
W6330	Submersible, Linear - 30"					**40K**	4000K CCT				
W6336	Submersible, Linear - 36"					**50K**	5000K CCT				
W6342	Submersible, Linear - 42"										
W6348	Submersible, Linear - 48"										

Mounting		Conduit Option		Cord Set Length		Lamped	
A3	Mounting Bracket - 3"	**SCF**	Cord Feed Straight	**CSL _ _**	Cord Length Available from 10ft to 120ft in 5ft Increments	**LP**	Lamp Installed
A6	Mounting Bracket - 6"						
A9	Mounting Bracket - 9"						

Length	LED Amperage	Rated Watt
12"	30mA	2.5
	60mA	5
	120mA	10

Recommeded transformer is the T1906.

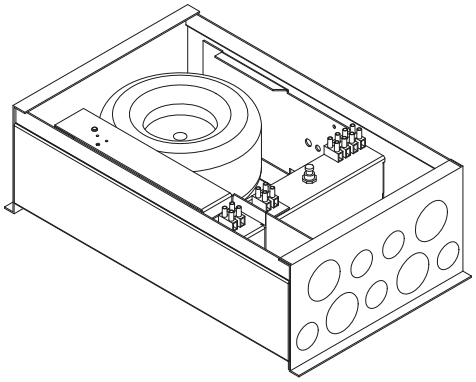
TQD Dimming Transformer - 277V



series

TQD150 — 150W, 5A @ 24VAC
TQD300 — 300W, 10A @ 24VAC
TQD500 — 500W, 16.67A @24VAC

277

primary voltage

277 — 277 Volt Primary

The **TQD Dimming Transformer** is a self-contained power source for Winline 24VAC Linear LED products that allows smooth continuous dimming to 1%. The TQD also provides smooth, continuous dimming in electronically noisy powerline environments.

Power: Available in 150VA, 300VA, and 500VA sizes. Primary voltage is 277V only. Secondary output voltage taps of 24V, 25V, 26V, and 27V, which can be used to make up for voltage drop on long remote distances. Resettable circuit breakers are provided on both the primary and secondary side.

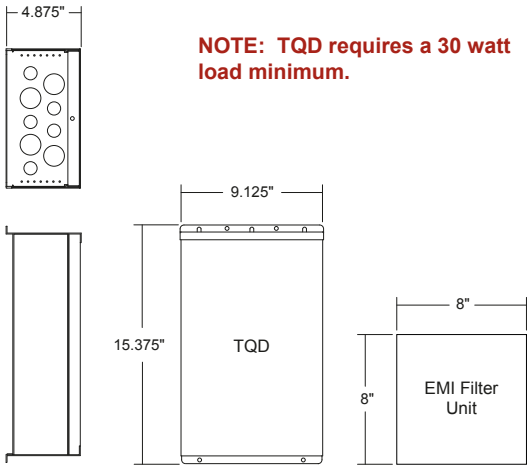
Model	Continuous Rated Load
TQD150	5A @ 24VAC
TQD300	10A @ 24VAC
TQD500	16.67A @ 24VAC

Dimming Control: The TQD transformer can be connected to most 0-10V dimming controls. The 0-10V input terminals provide a max of .5mA of current to the control.
A 120Vac phase cut dimming input is also available for connection to dimmers with a neutral wire connection. See wiring diagrams for more information on compatible dimmers.

Mounting: The TQD and EMI Filter Unit are housed in a steel enclosure rated for indoor use only. Mount vertically at least 18" a.f.f. and allow 12" between transformer and other electrical equipment. Keep low voltage secondary wiring at least 6 feet from audio or other low voltage signal wiring. Maximum ambient temperatures around this transformer must not exceed 40ºC (104ºF) with relative humidity less than 90% (non-condensing).

Interior Only

ETL Listed:
Conforms to UL STD 8750



NOTE: TQD requires a 30 watt load minimum.

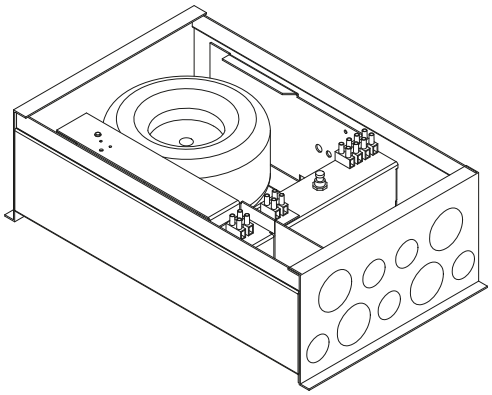
TQD Dimming Transformer - 277V



series

TQD150 — 150W, 5A @ 24VAC
TQD300 — 300W, 10A @ 24VAC
TQD500 — 500W, 16.67A @24VAC

277
primary voltage

277 — 277 Volt Primary

The **TQD Dimming Transformer** is a self-contained power source for Winline 24VAC Linear LED products that allows smooth continuous dimming to 1%. The TQD also provides smooth, continuous dimming in electronically noisy powerline environments.

Power: Available in 150VA, 300VA, and 500VA sizes. Primary voltage is 277V only. Secondary output voltage taps of 24V, 25V, 26V, and 27V, which can be used to make up for voltage drop on long remote distances. Resettable circuit breakers are provided on both the primary and secondary side.

Model	Continuous Rated Load
TQD150	5A @ 24VAC
TQD300	10A @ 24VAC
TQD500	16.67A @ 24VAC

Dimming Control: The TQD transformer can be connected to most 0-10V dimming controls. The 0-10V input terminals provide a max of .5mA of current to the control.
A 120Vac phase cut dimming input is also available for connection to dimmers with a neutral wire connection. See wiring diagrams for more information on compatible dimmers.

Mounting: The TQD and EMI Filter Unit are housed in a steel enclosure rated for indoor use only. Mount vertically at least 18" a.f.f. and allow 12" between transformer and other electrical equipment. Keep low voltage secondary wiring at least 6 feet from audio or other low voltage signal wiring. Maximum ambient temperatures around this transformer must not exceed 40ºC (104ºF) with relative humidity less than 90% (non-condensing).

Interior Only

ETL Listed:
Conforms to UL STD 8750

APPENDIX B: LIGHTING CUTSHEETS Note: This document is for information only. Refer to specifications for all catalog numbers, etc.

Wiring Diagram for 0-10V Dimming Control Input

Terminal names and use are as follows:

Primary Side

GND = Earth Ground
HOT = Line Connection
NEUT = Neutral Connection

Run a clean neutral back to the Distribution Panel for each TQD Dimming Transformer. Do not share neutral with other TQD Dimming Transformers or any other loads. Install EMI Filter Unit between the Distribution Panel and TQD. Each primary input terminal can accept up to (1) #12 AWG conductor.

Secondary Side

Secondary Circuit Breaker = Secondary connection to luminaire
Secondary Voltage Taps (27V, 26V, 25V, 24V) = Secondary connection to luminaire

Connect one and only one of these taps to get the desired secondary voltage. Multiple secondary circuits can be connected to these taps, however, do not connect multiple secondary circuits to different secondary voltage taps. Each secondary output terminal can accept up to (6) #14, (4) #12, (4) #10, or (2) #8 conductors.

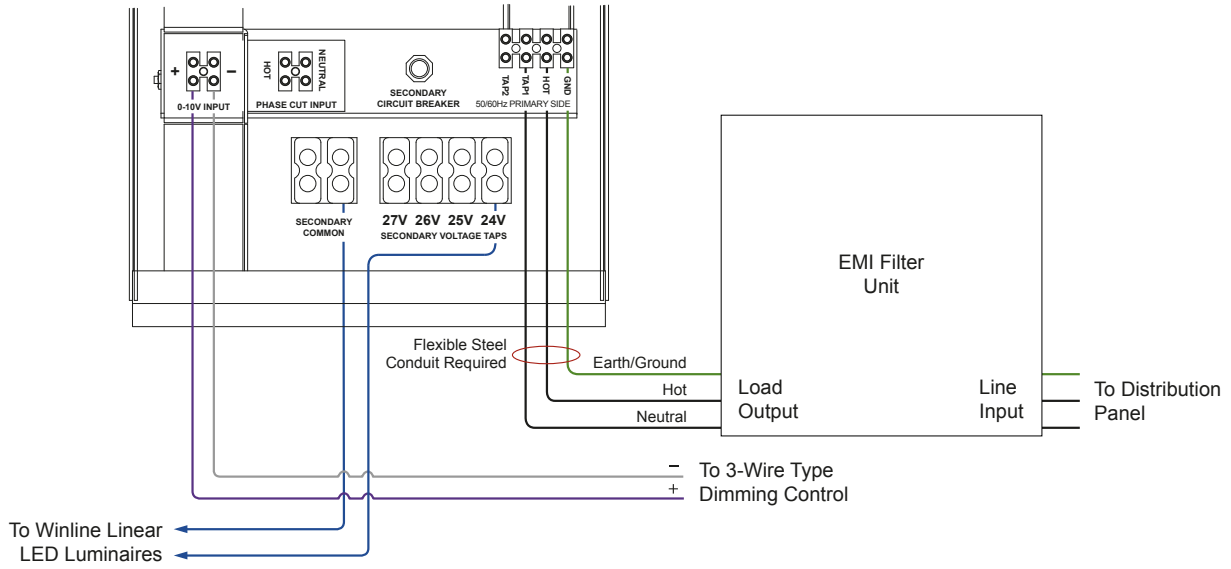
0-10V Dimming Input

+ = Positive terminal of dimming control or violet wire of a 3-wire fluorescent dimmer
– = Negative terminal of dimming control or grey wire of a 3-wire fluorescent dimmer

Do not reverse polarity or connect line voltage to either of these terminals or permanent damage will result. This is a Class 2 wiring and must be physically separated from line voltage per NEC. Each dimming input terminal can accept up to (1) #12 conductor.

0-10V Dimming Control Compatability

While impossible to test the TQD Dimming Transformer with every dimming control made by every dimming control manufacturer, our testing has determined that most 3-wire type fluorescent dimming controls work the same. Models known to work well with the TQD include, but are not limited to, Verti VTF-6AM, and GRX-TVI module.



Wiring Diagram for Phase Cut Dimming Control Output

Terminal names and use are as follows:

Primary Side

GND = Earth Ground
HOT = Line Connection
NEUT = Neutral Connection

Run a clean neutral back to the Distribution Panel for each TQD Dimming Transformer. Do not share neutral with other TQD Dimming Transformers or any other loads. Install EMI Filter Unit between the Distribution Panel and TQD. Each primary input terminal can accept up to (1) #12 AWG conductor.

Secondary Side

Secondary Common = Secondary connection to luminaire
Secondary Voltage Taps (27V, 26V, 25V, 24V) = Secondary connection to luminaire

Connect one and only one of these taps to get the desired secondary voltage. Multiple secondary circuits can be connected to these taps, however, do not connect multiple secondary circuits to different secondary voltage taps. Each secondary output terminal can accept up to (6) #14, (4) #12, (4) #10, or (2) #8 conductors.

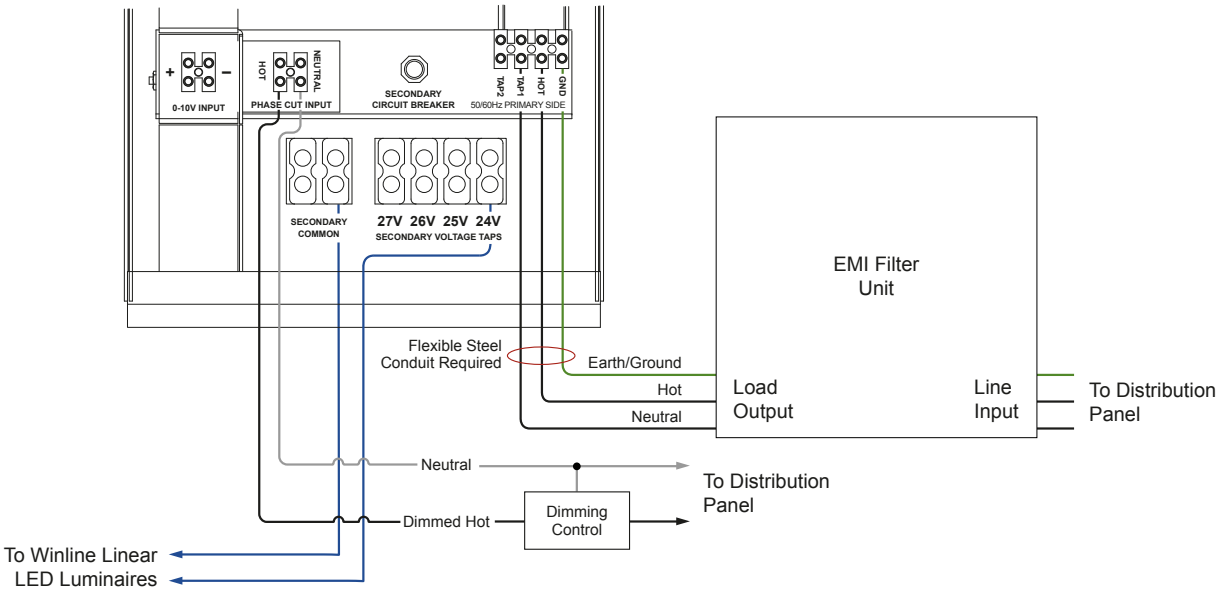
Phase Cut Dimming Input (120Vac only)

HOT = Dimmed Hot phase cut dimmer
NEUTRAL = Neutral from phase cut dimmer

The use of magnetic low voltage or forward phase dimmers with a neutral wire connection is required.

Phase Cut Dimming Control Compatability

While impossible to test the TQD Dimming Transformer with every dimming control made by every dimming control manufacturer, our testing has determined that, at a minimum, the use of phase cut controls with a neutral wire connection is required. Models known to work well with the TQD include, but are not limited to, Lutron's Maestro MRF2-6ND, GraphicEyeQS with PHPM-PA load converter, and RPM-4A module.

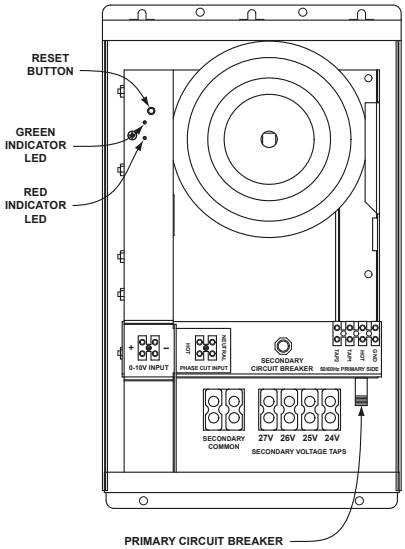


Start Up and Calibration

Make sure the full load and dimming controller is connected before energizing the TQD Dimming Transformer the first time.

At first power up the TQD Dimming Transformer will determine which type of dimmer is connected and then self-calibrate by running the lights up to 100% and then back to zero. It will then characterize the dimming response based on the load detected on the secondary circuit. The system is now ready to use.

START UP AND CALIBRATION



Recalibration: If the output load has been changed

If the connected load is changed after the initial start up, the transformer will need to be recalibrated for the new load. To recalibrate the transformer follow the steps below:

1. Set dimmer to 0% (OFF).
2. Hold down the Reset button for approximately 6 seconds. The RED indicator LED will flash rapidly.
3. When the RED indicator LED lights steady, release button and power the transformer off with the primary breaker inside the transformer (white toggle switch).
4. Power the transformer back up and the start up calibration sequence will begin.

Setting Minimum Dimming Threshold

Occasionally the minimum dimming threshold may need to be adjusted in order to get full travel on the dimming control. To reset the minimum dimming threshold of the TQD Dimming Transformer follow the steps below:

1. With the transformer energized hold down the Reset button for one second - the RED indicator LED will flash rapidly.
2. When the RED indicator LED lights steady, release the button.
3. The transformer will temporarily set the minimum dimming level to 0.01%.
4. Set the dimming control to the desired minimum level.
5. Hold down the Reset button until the RED indicator LED goes off - about 2 seconds.
6. The transformer is now in normal operating mode.

Switching Dimming Inputs

The TQD Dimming Transformer ships ready to accept either a 0-10V or Phase Cut input. Connecting anything to the 0-10V input will set the transformer to 0-10V input only. Likewise, connecting the Phase Cut dimmer to the Phase Cut terminals will set it to Phase Cut input only. If you inadverently connect to the wrong input, you will not be able to control the unit without taking the following steps:

To switch from 0-10V input to Phase Cut input do the following:

1. Set dimmer/controller to 0% (OFF) or short across 0-10V input terminals with length of wire
2. Ensure the LED load is off
3. Hold down the Reset button for at least 6 seconds - the RED indicator LED will flash rapidly
4. The RED LED will glow steady and then go out - release the button when the RED LED goes out
5. Power the transformer off with the primary breaker inside the transformer (white toggle switch)
6. Remove wire across 0-10V terminals
7. Connect Phase Cut terminals
8. Set dimmer/controller to 50%
9. Power the transformer back up and the start up calibration sequence will begin

To switch from Phase Cut input to 0-10V input do the following:

1. Set dimmer/controller to 0% (OFF)
2. Ensure the LED load is off
3. Hold down the Reset button for at least 6 seconds - the RED indicator LED will flash rapidly
4. The RED LED will glow steady and then go out - release the button when the RED LED goes out
5. Power the transformer off with the primary breaker inside the transformer (white toggle switch)
6. Disconnect Phase Cut input
7. Connect 0-10V input to 0-10V terminals
8. Set dimmer/controller to 50%
9. Power the transformer back up and the start up calibration sequence will begin

Troubleshooting Tips

The two indicator LEDs are very useful in determining what state the transformer is in as well as what is powered and connected.
GREEN flashing 2 seconds ON / 2 seconds OFF = Load connected, Dimmer connected, Load turned on.
GREEN flashing 4 seconds ON / 4 seconds OFF = Load connected, Dimmer connected, Load turned off.
RED and GREEN flashing together = Load connected, Dimmer NOT connected.
RED Flashing = Minimum Set mode.
RED Steady = Error (overvoltage, undervoltage no load, overload, overtemperature).
NO LEDs on = No power to transformer.

ETC®

D60XTI™

Desire® Series

100V 115/120V 230/240V

GENERAL INFORMATION

ETC's Desire Series D60XTI brings the amazing control of the x7 color system™ and the long throw of a D60 to your facility for permanent installation. With its IP66 rating, this luminaire is ready for mounting inside or outside- wherever you need it. The Selador® x7 color system produces the widest range of spectrally-balanced saturated and tinted color choices available. The D60XTI offers a rugged die-cast enclosure, noiseless fan-free operation and multiple lens options that can be changed on site.

D60XTI LED ARRAY OPTIONS

D60XTI luminaires are based on the x7 color system that uses seven different LED colors to achieve true, usable broad spectrum color. The D60XTI luminaire is available with any one of the following x7 color arrays to best suit the intended application:

- D60XTI Vivid™ – the x7 color system array balanced for best all-around use as a color-changing wash luminaire
- D60XTI Lustr+™ – optimized with six colors plus high-intensity white LEDs to create an ideal front-light wash fixture. Full range color, with an emphasis on lighter colors and white
- D60XTI Studio HD™ – Studio HD combines warm white and cool white LEDs for variable color temperature mixing. Added to this are five carefully chosen LED colors from the Selador x7 color system to fill in the white LED spectral gaps. D60XTI Studio HD provides the richest variable white light possible in an LED luminaire

Also available in the following static white arrays:

- D60XTI Studio Daylight™ – Studio Daylight contains sixty 5600K LEDs for high-intensity, non-variable cool-white output
- D60XTI Studio Tungsten™ – Studio Tungsten contains sixty 3000K LEDs for high-intensity, non-variable warm-white output

HLB Project #: 16165

APPENDIX B: LIGHTING CUTSHEETS Note: This document is for information only. Refer to specifications for all catalog numbers, etc.

SPECIFICATIONS

GENERAL
- Easy setup via any RDM device, such as ETC Gateways and Gadget
- 60 LED variable color-mixing light wash luminaire (color-mixing luminaires)
- 60 LED white-light wash luminaire (static white luminaires)
- ETL listed to UL1598
- IP66-rated for exterior wet-location use
- Data termination board for easy installation (included)
- Meets 3G ANSI C136.31 Vibration standard for bridge applications

PHYSICAL
- Rugged die-cast, all-metal housing
- Accessory ring for installation of secondary lenses
- Available in black (standard), white or silver (optional) or custom colors (contact factory)
- Hanging yoke standard.
- Cable diameter: power 0.36"/ data 0.34"
- Effective Projected Area (EPA): 0.95

ELECTRICAL
- 100VAC to 240VAC 50/60Hz universal power input
- Waterproof, 72" outdoor-rated power lead
- Up to 10 fixtures (15A max) may be fed on the same circuit
- Requires power from a non-dimmable source
- Inrush
  - 120V: 46A (First half-cycle)
  - 240V: 77A (First half-cycle)

LED*
- 50,000-hour LED life (50,000 hours to 70% intensity)
- 60 LUXEON® Rebel LED emitters
- Studio Daylight and Studio Tungsten use Rebel ES white light emitters for higher output

*See additional LED notes on page three

COLOR
- Exclusive x7 color system seven-color LED array
- Broad spectrum color interacts seamlessly with conventional sources
- Beautifully illuminates skin tones and other objects for a natural appearance and high color rendering
- Exclusive red-shift option emulates tungsten dimming performance (not available on static white luminaires)
- Studio HD array uses warm and cool white light emitters with additional deep-color emitters to allow variable color temperature from 2700K-6500K
- Studio Tungsten and Studio Daylight provide good color rendering at very high brightness

OPTICAL
- Primary field angle of 17° and beam angle of 8°
- Secondary lenses available for multiple beam spread options
- Lenses must be ordered separately
- Refer to accessories chart for lenses available

CONTROL
- DMX512 in and thru via termination board (included)
- See DMX Input Channel Profilesfor operation modes
- 15-bit virtual dimming engine provides smooth, high-quality theatrical fades and minimizes color shift during dimming
- RDM functionality for address and setting changes

SPECIFICATIONS

THERMAL
- Ambient operating temperature of -4° to 104°F (-20° to 40°C)
- Active electronic thermal management for droop-free operation
- Noiseless, fan-free convection cooling for acoustically sensitive installations
- Luminaire is designed for continuous operation up to 104°F (40°C) ambient temperature and requires free flow of air around luminaire housing

Secondary Lens Options

MODEL	DESCRIPTION: The following lenses are cut for D60XTI luminaires and create round, linear or oblong field patterns as described below. These lenses are not for use in Selador Classic™ (Vivid, Lustr®, Paletta™, etc.) fixtures.
Narrow Linear Field	Note: This is the same material as Selador Classic lenses. Not UV-stable, not for outdoors.
Round Field	Any one of the following round lenses may be installed permanently in the luminaires at the factory as a special order. UV-stable for outdoor use.
D60XTI-RVN	Very Narrow lens (round field)
D60XTI-RN	Narrow lens (round field)
D60XTI-RM	Medium lens (round field)
D60XTI-RW	Wide lens (round field)
D60XTI-RXW	Extra Wide lens (round field)
Oblong Field	UV-stable for outdoor use
D60XTI-ON	Narrow lens (oblong field)
D60XTI-OM	Medium lens (oblong field)
D60XTI-OW	Wide lens (oblong field)

MODEL	VOLTAGE (V)	CURRENT (A)	WATTS
D60XTI	120 / 240	1	124

NOTES ABOUT LED LUMINAIRES

All LED sources experience some lessening of light output and color shift over time. LED output will vary with thermal conditions, which can be affected by ambient temperatures and orientation (see the D40 Ambient Temperature and Power Budgeting Guide for more details). Based on the LED manufacturer's B50 L70 specification, a Selador luminaire will achieve ~70% of its initial output after 50,000 hours of typical usage. In individual situations, LEDs will be used for different durations and at different levels. This can eventually lead to minor alterations in color performance, necessitating slight adjustment to presets, cues or programs.

CRI AND CQS RATINGS

Desire luminaires were evaluated for CRI and CQS performance using measured output spectrum and optimized mix solutions for a best spectral match to black body sources at 3200K and 5600K.

Fixture	CRI	CQS	Color Fidelity	Duv
D60XTI Vivid at 3200K	87	89	89	0.000
D60XTI Vivid at 5600K	90	92	92	0.000
D60XTI Lustr+ at 3200K	86	88	88	0.000
D60XTI Lustr+ at 5600K	93	92	90	0.000
D60XTI Studio HD at 3200K	89	90	91	0.000
D60XTI Studio HD at 5600K	92	94	94	0.000
D60XTI Studio Daylight at 5600K	71	70	69	0.001
D60XTI Studio Tungsten at 3000K	86	86	86	0.001

All D60XTI Studio luminaire versions provide excellent color rendering to the eye, particularly at higher color temperature settings such as 5600K. In most cases the Duv is 0.000. A Duv rating of 0.000 indicates that the color mix used is exactly on the black body line, with no green or magenta tint.

Notes to videographers:

- All Desire luminaires use LUXEON Rebel ES emitters specified by the strictest binning standards. However, on-camera LED response varies with different cameras and settings. Daylight LEDs can appear slightly greener than other 5600K sources on camera.
- Luminaires with non-variable single-color daylight arrays such as Studio Daylight may use standard color correction filters (Rosco 3314, Rosco 3316 or similar) to achieve the desired on-camera result.
- Camera tests using your specific set up are recommended to determine the best configuration.

Values in black refer to old lens descriptions.

CONTROL OPTIONS

User settings on D60XTI luminaires allow multiple operational modes and settings for console operation via DMX protocol. Some of the setting options are:

- Multiple DMX options ranging from a simple RGB profile – which effectively controls all seven LED colors via three channels – to nine-channel direct color and intensity control
- Multiple dimming curve options
- Preset colors and sequences for stand-alone (no console required) operation
- White point selection – white light and color behavior based on a specific color temperature white light (i.e. 3200K, 5600K, etc)
- Loss of data behavior options – instant-off, hold last look for two minutes, etc.
- Output modes – three output options that offer the user a choice between maximum output and maximum consistency

See the user manual for a complete explanation of all of the control settings and options for the D60XTI

Quick Setups

To assist in managing the numerous control and luminaire behavior choices, five combinations of operational settings are available to quickly get started. These settings are specifically created for different applications and are easily accessible at the luminaire display. Each setting can then be modified as required to take advantage of all of the possible control features.

Setting Title	Profile	Description	Typical Features*
General	Direct	Factory default: For general purpose use including interior architectural applications.	• Standard dimming curve • Regulated output for color consistency
Stage	HSI Plus 7 Enabled	Theatrical lighting: Duplicates the color and dimming behavior of tungsten stage lighting fixtures.	• Incandescent dimming curve • Regulated output for color consistency • 3200K white point setting
XT Arch	HSI	Exterior architectural lighting: Provides a high degree of color consistency in high ambient temperature environments.	• Standard dimming curve • Protected output • 3200K white point setting
High Impact	RGB	Event lighting: Enables quickest response, simple RGB control and strobe channel for maximum effect usage.	• Quick dimming curve • Boost mode for maximum intensity • 5600K white point setting
Studio	Studio	Video/film lighting: Enables three parameter control of white light (intensity, white point and tint) via DMX from console.	• Linear dimming curve • Regulated output mode for color consistency

*See user manual for complete list of features for each Quick Setup.

CONTROL OPTIONS

DMX Input Channel Profiles

DMX Profile	DMX Channels	Channel Assignments	Notes
Direct	9	1 – Red 2 – Orange (white if Lustr+) 3 – Amber 4 – Green 5 – Cyan 6 – Blue 7 – Indigo 8 – Intensity 9 – Strobe	Direct control of each individual color with a separate master intensity channel. Color calibration of LEDs is not active in this mode. The nine-channel profile will produce the highest quality color crossfades.
HSI	5	1 – Hue (coarse) 2 – Hue (fine) 3 – Saturation 4 – Intensity 5 – Strobe	High-resolution hue (two-channels), saturation and intensity control. HSI mode will produce color crossfades around the color space.
HSIC	6	1 – Hue (coarse) 2 – Hue (fine) 3 – Saturation 4 – Intensity 5 – Strobe 6 – Color Point (CCT)	High-resolution hue, saturation and intensity control as above, with the addition of a color point channel to adjust the color temperature of the luminaire in both white light and color. Color crossfade performance is the same as EHSI.
RGB	5 (Ch. 4 not used)	1 – Red 2 – Green 3 – Blue 4 – n/a 5 - Strobe	Effectively addresses all seven colors via three channels of control. RGB profile will produce medium quality color crossfades.
Studio	3	1 – Intensity 2 – Color Point (CCT) 3 – Tint	Controls luminaire as a white light unit. If no DMX (i.e. console input) is present, fixture can be adjusted for these three parameters on the U/I at the back of the unit.
Additional profile options			
Plus 7		Seven additional color control channels are available in RGB, HSI, HSIC and Studio profile settings. For example: HSI with Plus 7 enabled becomes a 14-channel profile-	
		1 – Hue (coarse) 2 – Hue (fine) 3 – Saturation 4 – Intensity 5 – Strobe 6 – n/a 7 – Plus 7 control on/off 8 – Red 9 – Orange (white if Lustr+) 10 – Amber 11 – Green 12 – Cyan 13 – Blue 14 – Indigo	The desired color and intensity is achieved by using the HSI or RGB channels. Placing channel seven at a value over 51% gives the luminaire a 14-channel profile. Channels 8-14 represent the native colors of the luminaire and allow the operator to adjust individual color channels to fine-tune the color output.
Strobe		Variable strobe control: 0% is no strobe. The fixture output will strobe more rapidly as the strobe channel value approaches 100%.	

CONTROL OPTIONS

Studio Daylight and Studio Tungsten (only)

Quick Set-Ups

Setting Title	Profile	Description	Typical Features*
Studio	Studio	Simple mode for linear intensity control	• Linear dimming curve • Regulated output for intensity stability
Single Channel	Direct	For general purpose architectural use	• Standard dimming curve • Regulated output for consistency
Stage	Direct	Matches conventional luminaire performance	• Incandescent dimming curve • Regulated output

CONTROL OPTIONS

DMX Input Channel Profiles

DMX Profile	DMX Channels	Channel Assignments	Notes
Studio	3	1 – Intensity 2 – Strobe 3 – N/A (only used in D60)	Control of parameters is also enabled from the luminaire's user interface. No console required.
Direct	3	1 – Intensity 2 – Strobe 3 – N/A (only used in D60)

PHOTOMETRICS

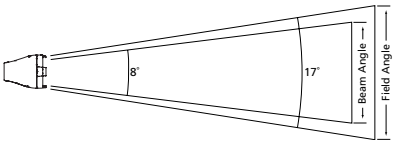
D60XTI Studio Tungsten

Mode	Degree	Candela	Field Lumens	Beam Lumens	Lumens Per Watt
Boost - cold	23˚	171,089	6,482	3,001	43.2
Regulated	23˚	162,409	6,172	2,918	39.6

Metric conversions: For meters, multiply feet by 0.3048
For lux, multiply footcandles by 10.76



Throw Distance (d)	10′ 3.0m	15′ 4.6m	20′ 6.1m	25′ 7.6m	373.6′ 113.9m
Field Diameter	4.1′ 1.3m	6.2′ 1.9m	8.3′ 2.5m	10.4′ 3.2m	–
Illuminance (fc)	1,395	620	349	223	1
Illuminance (lux)	15,020	6,676	3,755	2,403	10.76

For field diameter at any distance, multiply distance by 0.414
For beam diameter at any distance, multiply by 0.189

Throw Distance Multiplier (TDM)

To determine the distance from the center of the beam (Origin) to a certain illuminance level at a particular distance, multiply the desired throw distance by the TDM desired on the Iso-Illuminance diagram.

Throw Distance (TD) x Throw Distance Multiplier (TDM) = Distance from the Origin (DfO) (distance from the center of the beam)

Example: 25 feet (TD) x 0.047 (TDM) = 1.175 feet from center of beam (DfO)

For illumination with any lamp, multiply the candlepower of a beam spread by the multiplying factor (mf) shown for that lamp.

To determine illumination in footcandles or lux at any throw distance, divide candlepower by distance squared.

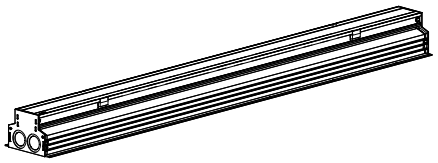
Client _____ **Project name** _____

Order# _____ **Type** _____ **Qty** _____

FEATURES AND BENEFITS



Physical :

- Aluminum optical chamber housing
- Anodized aluminum flush trim
- Polymer recycled PVC blockout housing reinforced with a stainless steel frame
- Available in 1', 2', 3' or 4' sections
- Die cast aluminum end caps
- Stainless steel hardware
- Tempered glass lens
- Asymmetric wallwash, 8° x 8°, 10° x 10°, 10° x 30°, 10° x 60°, 10° x 90°, 15° x 25°, 30° x 30°, 30° x 60°, 35° x 35°, 50° x 80°, 60° x 60°, 80° x 80° or 90° x 90° optics
- 0°, 2.5°, 5° or 20° factory-set optical aiming options (not available for asymmetric wallwash)
- IP68 rated for up to 1' (30cm), not suitable for permanent immersion applications
- IK10 rated
- Walk-over compliant up to 500 kg, self-supported; walk-over compliant up to 1000 kg, concrete-supported[1]

c UL us CE RoHS **IK10**

Photometric Summary

4ft RGB (full white), 0° tilt setting	Delivered Output [lm]	Intensity [peak cd]
WW	1,600*	1,206*
8°x8°	2,121*	27,842*
10°x10°	1,837*	16,501*
10°x30°	2,155*	11,889*
10°x60°	1,724*	4,765*
10°x90°	1,964*	2,919*
30°x30°	2,202*	7,936*
30°x60°	1,896*	2,499*
60°x60°	1,807*	1,439*
90°x90°	1,913*	1,002*

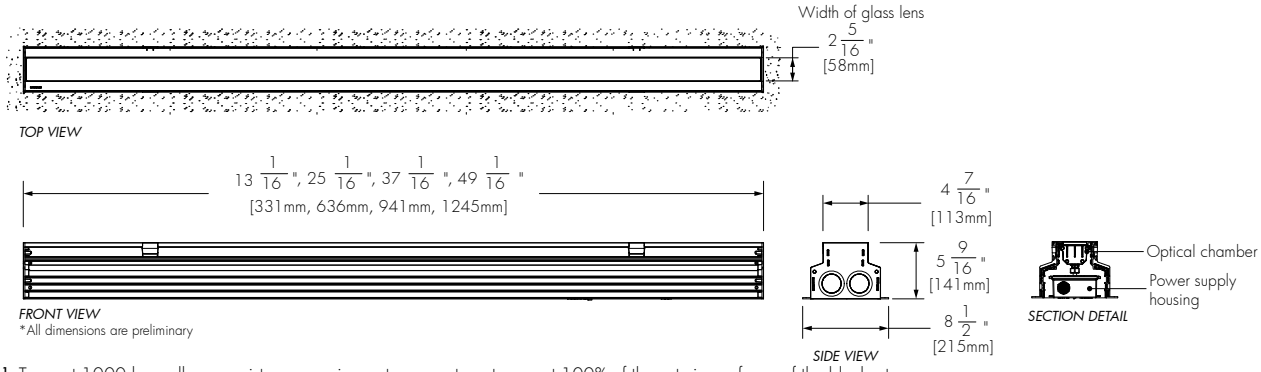
*Estimated. Consult lumenpulse website for the latest ies files.

Performance :

- Color mixing options: RGB (3 channels), RGBW (4 channels) or RGBA (4 channels)
- 1,435 delivered lumens and 4,525 candelas at nadir (RGB full output, 4' unit, 10°x60° optic, 2.5° tilt setting)
- 1,775 delivered lumens and 4,477 candelas at nadir (RGBW full output, 4' unit, 10°x60° optic, 2.5° tilt setting)
- 800 delivered lumens and 1,785 candelas at nadir (RGBA full output, 2' unit, 10°x60° optic 0° tilt setting)
- Lumen maintenance: 80,000 hrs [L70 @ 25°C]
- Lumen maintenance: 60,000 hrs [L70 @ 50°C]
- Lumen measurements: comply with LM - 79 - 08 standard
- Resolution per foot or per fixture (configured with LumenID V3 software & DMX/RDM)
- Operating temperatures: -40° C to 50° C [-40F to 122F]

Electrical :

- Line voltage luminaire for 100 to 277V
- Power and data in 1 cable (#16-5)
- IP68 push-lock connectors
- 17.25W/ft[2]
- Control options: Lumentalk or DMX/RDM enabled



[1] To meet 1000 kg walk-over resistance requirements, cement must support 100% of the exterior surfaces of the blockout.
[2] Power consumption is typically 20% higher for 1' fixture lengths.

ACCESSORIES

Order separately, refer to each item's specification sheet for ordering information

Control Systems:

LTO2 Lumentouch is a wall mount DMX 512 controller keypad.

LCU Lumencue is a USB / mini SD DMX 512 controller.

LID LumenID is a diagnostic and addressing DMX 512 controller.
It must be specified on all DMX applications.
Refer to LID specification sheet for details.

LID-LT LumentalkID is a diagnostic and addressing controller.
It must be specified for all Lumentalk (LT) applications.
Refer to LID-LT specification sheet for details.

LTN Lumentone is a simple pre-programmed DMX 512 controller with a push button rotary dial and live feedback.

Control Boxes:

CBX DMX/RDM control box.
Up to six power and data outputs to fixtures or fixture runs.
Ethernet enabled option.
Refer to CBX specification sheet for details.

ACCESSORIES - continued
Order separately, refer to each item's specification sheet for ordering information

Cables:

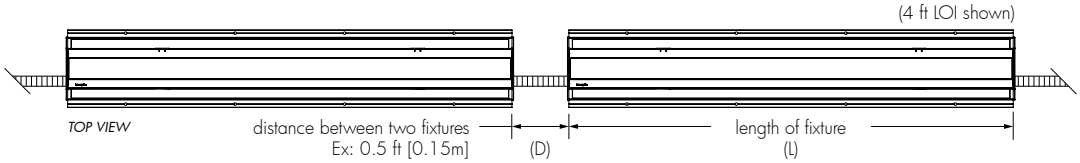
LOILC-__-__ Leader Cable for Lumenfacade Inground.

Please specify certification (UL or CE), cable length (10', 25' or 50' [3m, 7.6m or 15.2m] standard).
Suitable for data applications.
Sealing endcap is mandatory for any unused connector. (1) included with every leader cable.
Consult Lumenfacade Inground leader cable specifiation sheet for details.

LOIJC-__-__ Jumper Cable for Lumenfacade Inground.

Please specify certification (UL or CE) and cable length (2', 4' or 10' [0.6m, 1.2m or 3m] standard).
Suitable for data applications.
Consult Lumenfacade Inground jumper cable specifiation sheet for details.

Jumper Cable Length Selection



Add the length of one fixture to the distance between two fixtures: L + D.	Ex: L + D = 4.5ft [1.4m]
Order the next longest jumper cable available: **2', 4' or 10' [0.6m, 1.2m or 3m]**	Therefore 10' [3m] jumper cable required

Inground Junction Box (optional):

Lumenfacade Inground IP68 sealed junction box starter kit - **LOI-JBOX** order code.
*Use for stand alone fixtures and/or first of run fixtures
*LOI-JBOX accessory does not fit in 1ft fixtures.

Specification Sheet

lumenfacade™

INGROUND
COLOR CHANGING

HOW TO ORDER

LOI	100/277	Select:	Select:	Select:	Select:	Select:	Select:	Select:
1	2	3	4	5	6	7	8	9

1

Housing:

LOI - Lumenfacade™ Inground

A Lumenfacade Inground fixture includes 1x optical chamber (LOIC), 1x power and control box (PACBOX) and 1x recessed blockout (RBO). The LOIC, PACBOX and RBO are provided according to the output/color, length and control configuration.

2

Voltage:

100/277 - 100-277 volts

3

Length:

12 - 13 1/16 inches (331mm) (3.39 kg/7.48 lbs)
24 - 25 1/16 inches (636mm) (6.93 kg/15.28 lbs)
36 - 37 1/16 inches (941mm) (9.68 kg/21.35 lbs)
48 - 49 1/16 inches (1245mm) (12.24 kg/26.99 lbs)

4

Colors and Color temperatures:

RGB - Additive red, green and blue
RGBW - Additive red, green, blue and white 4000K
RGBA - Additive red, green, blue and amber
Consult factory for color mix with Royal Blue, 3000K or other white color temperature LEDs.

5

Optics:

Asymmetric
WW - Asymmetric Wallwash optic

Symmetric

8x8 - 8° x 8°[2]
10x10 - 10° x 10°[2]
30x30 - 30° x 30°
35x35 - 35° x 35°
60x60 - 60° x 60°
80x80 - 80° x 80°
90x90 - 90° x 90°

Bi-symmetric

10x30 - 10° x 30°
10x60 - 10° x 60°
10x90 - 10° x 90°
15x25 - 15° x 25°
30x60 - 30° x 60°
50x80 - 50° x 80°

6

Tilt Setting:

Note: asymmetric wallwash optic is factory set with a 2.5 degree tilt.

TS0 - 0 degrees
TS2.5 - 2.5 degrees
TS5 - 5 degrees
TS20 - 20 degrees
Factory set. Cannot be adjusted in the field. Consider ground level when selecting a tilt setting for your application.

7

Optical Option:

INTL - Internal Louver[2]

8

Control:

LT - Lumentalk[3]
DMX/RDM - DMX/RDM enabled[4]

9

Option:

ASL - Anti-slip lens

Consult installation instructions to plan all aspects of the fixture installation. A completed LOI Certificate of Installation must be returned to Lumepulse Group to activate the warranty.

Notes:

[1] For best results, we recommend a 6-inch (15cm) setback from surface. Contact factory for application support. [2] The addition of an internal louver will affect beam distribution, consult factory for application support. [3] Lumentalk enabled fixtures must be commissioned using LumentalkID software and a LID-LT. Consult factory for details. [4] Fixtures set to by fixture resolution.3 DMX addresses per RGB fixture, 4 DMX addresses per RGBW fixture, 4 DMX addresses per RGBA fixture.

Description

Lumenpulse has revamped the Control Box (CBX) with a new, simpler offering adapted to both indoor and outdoor use. Along with many mechanical advantages, the CBX has been re-designed to be as user-friendly as possible for control system installers and technicians. The CBX combines line voltage and DMX/RDM control signals in a single cable for robust bi-directional communication. Internally, the CBX boosts and splits the control signal into a maximum of six outputs for scalable network topologies. The CBX can be used to enable control for white, dynamic white, or color-changing luminaires from families such as Lumenbeam, Lumencove, and Lumenfacade. New families such as Lumenquad, that use a 6-conductor cable construction for DMX/RDM implementations, are fully supported by the revamped CBX. New 6-conductor luminaires, in conjunction with a 6-conductor configured CBX, will improve data reliability, reduce noise susceptibility, and enable longer DMX/RDM runs.

Features

Configurations	Daisy chain (1 output), Star (up to 6 outputs)
Input Protocols Supported	DMX/RDM
Output Protocols Supported	DMX/RDM
Test Button	Dynamic show broadcast for testing
Indicator Lights	TX and RX LED lights per port
3G Vibration Rated	Meets 3G ANSI C136.31 vibration standard for bridge applications
Options	Corrosion-resistant coating for hostile environments
Warranty	5-year limited warranty

Physical

Housing Material	Die cast aluminum
Compartments	Base for connections, Cover for electronics
Cover	Hinged with safety cable
Surface Finish	Electrostatically applied polyester powder coat
Weight	3.75 lbs (small housing), 7.95 lbs (large housing)

Electrical and control

Input Voltage	100 to 347 volts
Power Input	1/2 in provision holes for 1/2" NPT, PG16 or 20mm
Data Input	1/2 in provision holes for 1/2" NPT, PG16 or 20mm
Outputs	Up to 6 outputs, 1/2 in provision holes for 1/2" NPT, PG16 or 20mm
Control	DMX/RDM enabled
Luminaire Interface	5 or 6 conductor compliant

Environmental

Storage Temperature	-40 °F to 185 °F
Start-up Temperature	-13 °F to 122 °F
Operating Temperature	-13 °F to 122 °F
Ingress Protection Rating	IP66

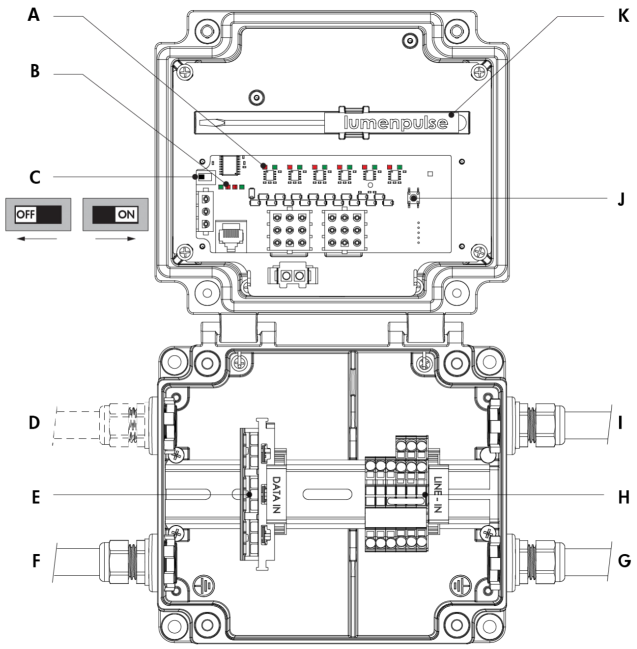
Input and output details

CBX-DS, 100-277V configuration



A - Output port LED indicator lights
Visual check of outgoing DMX control signal.
B - Input port LED indicator lights
Visual check of incoming DMX control signal.
C - Termination switch
Simple, time-saving switch for terminating the last device in line - no 120-ohm resistor required.
D - Optional data output to next CBX
Not isolated/ not boosted
E - Terminal blocks (data input)
Recommended wire gauge range: 24-16 AWG [0.205-1.307mm²]
F - Data input
G - Power & data output to fixture, 5 or 6 conductor cable
Maximum of 4x cascading control boxes per installation, isolated.
Note: 5 and 6 conductor fixtures cannot be combined in the same CBX.
H - Terminal blocks (power input/data output)
Recommended wire gauge: 16 AWG [1.307mm²]
Range: 20-12 AWG [0.519-3.301mm²]
I - Power input (100-277V)
J - Test button
Test fixtures with a simple button press that broadcasts a dynamic show to all of the fixtures on the line - with no programmer or console required. Once all fixtures are confirmed operational, the user can simply press the test button again and the test show will turn off.
K - Tool for connector operation

Refer to installation instructions for additional wiring details.

How to order

1	2	3	4	5	6

1 . Housing

CBX-DS	Power and Control box, Daisy Chain Configuration (1 output)
CBX-ST	Power and Control box, Star Configuration (up to 6 outputs)

2 . Input Voltage

100	100 volts
120	120 volts
208	208 volts
220	220 volts
240	240 volts
277	277 volts
347	347 volts [1]

3 . Control

DMX/RDM	DMX/RDM enabled

4 . Finish

BK	Black Sandtex®
BRZ	Bronze Sandtex®
SI	Silver Sandtex®
WH	Smooth white
BKTX	Textured black
BRZTX	Textured bronze non-metallic
GRATX	Textured medium gray
GRNTX	Textured green
WHTX	Textured white
CC	Custom color and finish (please specify RAL color) [2]

5 . Options

CRC	Corrosion-resistant coating for hostile environments [3]

6 . Certification

UL	UL compliant
CE	CE compliant

Notes:

[1] Consult fixture specification sheets for 347V availability.

[2] Lumenpulse offers a wide selection of RAL CLASSIC (K7) colors with a smooth texture and high-gloss finish. Please consult factory for a list of available K7 colors, other RAL textures and glosses, or to match alternate color charts. Final color matching results may vary.

[3] Use only when exposed to salt spray and harsh chemicals. This option is not required for normal outdoor exposure.

NU4" Round Adjustable Xicato

XICATO LUTRON 2016 OEM ADVANTAGE ACCOUNT eldoLED your product | our drive

DESCRIPTION

The NU4RA 4" recessed adjustable by ALPHABET offers cutting edge LED technology, premium performance, thoughtful construction and pleasing aesthetics. Offered standard with premium dimming using EldoLED 1% flicker free drivers in 120V, 277V, and 347V. A minimalistic look is achieved with an ultrathin 1/16" trim that is only 5/16" wide. Color choices of both trim and bezel are offered for a customized look. An adjustable hot-aiming system allows tilt adjustments from 0° to 40° with 360° rotation. The aiming adjustment and locking mechanisms are accessible from below the ceiling while the reflector is installed. A complex tilting mechanism positions the tilting axis for the maximum optical performance at all angles.

HOUSING

Electrocoated 16-gauge cold-rolled steel provides enhanced structural reinforcement and rust prevention. Superior, flame-retardant, UL-certified, injection-molded commercial-grade Lexan™ (PC) is used for the frame and regressed bezel trim. Lexan provides unmatched durability and impact resistance, 270°F heat deflection temperature, and is tested for UV resistance and water exposure in outdoor applications. The thermally-advanced, anodized heat sink uses 6063 aluminum alloy. Wet location rated is offered standard. A 90-minute constant-power IOTA emergency battery backup is available.

MOUNTING

An advanced mounting system allows for quick and secure installation with LED and driver serviceability from below the ceiling. The LED assembly uses die-cast aluminum mounting clamp grips (MCG) that swing out to tighten onto variable ceiling thicknesses ranging from 1/8" to 1-1/4". Integrated rubber feet on each MCG provide a non-slip vibration-resistant installation. The hidden MCG system is accessible from below ceiling by removing the snap-in lens/bezel assembly with either the included suction cup or a screwdriver blade. Integrated bar hangers feature integral toothed nails, T-bar mounting slots with locking holes, tabs for joist positioning, and extendibility from 14-3/4" to 26". Retrofit mounting option allows for installation from below ceiling by use of compact driver box. Ceiling cutout size is 4-3/8" diameter.

LISTINGS

- ETLus Listed to UL1598, cETL Listed to CSA C22.2 #250.0
- Type Non-IC, IC, CP, Airtight ASTM Standard E283
- Suitable for damp locations (no lens version)
- Suitable for wet locations, IP65 (lensed version)
- Non-conductive, Lexan dead-front construction
- Made in the USA – meets the requirements of the Buy American provision within the ARRA

LED INFO

- SDCM = 1X2 MacAdam Ellipse, Duv +/- 0.001

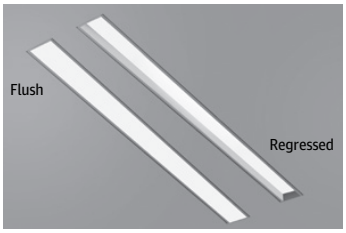
LIGHTING™

Slot 4 LED Design2Ship™
Recessed Linear

Type:

Project:

Catalog Number:
DO NOT TYPE HERE. Autopopulated field.



Slot 4 LED takes both form and function a step further with increased efficacy and integral controls creating a digitally addressable luminaire that is perfect where visually harmonious illumination and energy efficiency are desired.

Slot 4 LED is the ideal choice for spaces that emphasize lines and clean contemporary design. It is a perfect fit for Armstrong TechZone™ ceiling systems. A regressed lens option provides added dimension to the sleek, slender design.

Specification Features (continued on page 2)

Housing
Nominal 4" x 2', 3', 4', 5', 6', 7', 8' and continuous rows in 1' increments as standard, upper housing fabricated from cold-rolled steel with extruded aluminum ceiling trim.

Finish
Painted high reflectance matte white powder coat.

Reflector
Precision-formed steel; high reflectance matte white powder coat; 93% reflectivity.

Shielding
Flush Lens: Snap-in 90% transmissive satin acrylic lens.

Regressed Lens: Lay-in 90% transmissive satin acrylic lens.

Mounting
Recessed. Available for sheetrock, 9/16" slot grid or 15/16" inverted tee ceilings, or 9/16" inverted tee.

Design2Ship
Maximum order quantity of 500 linear feet per order. 5 business days from clean release of the order.

Notes
1. Supplied with lift and shift lay-in lens.
2. Supplied with snap-in lens.
3. Not intended for post sheetrock installation.
4. Wall Wash not available with RLP lens option.
5. Remote mounted. Not available with CP.
6. Must select with NODIM option.

marklighting.com | 888-834-5684 | ©2017-2019 Acuity Brands Lighting, Inc. All Rights Reserved. We reserve the right to change design, materials and finish in any way that will not alter installed appearance or reduce function and performance.

Specification Features (continued)

LED Components
Linear: Nichia® - 757 Series LED chips (available in 80 or 90 CRI)

LED Life
Rated 65,000 hours (L80) at 25 °C ambient temperature.

Color Consistency
The Acuity Brands circuit boards for the linear LED components use a precise binning algorithm which creates a consistent color temperature from board to board. Color variation is no greater than a 2.5 Step MacAdam (2.5SDCM) along the black body locus from board to board.

Driver
eldoLED constant current driver options delivers ultra-smooth dimming resolution from 100% to 0.1%, while assuring flicker free, low current inrush, 89% efficiency and low EMI.

Integrated Controls
Optional nLight® embedded controls make luminaire addressable-allowing it to digitally communicate with other nLight enabled controls such as dimmers, switches, occupancy sensors and photocontrols. Simply connect all the nLight enabled control devices using standard CAT5 Cabling. (Input option: NLIGHT)

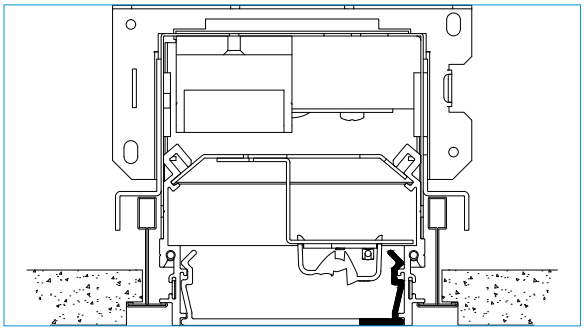
A+ Capable Luminaire
This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning.

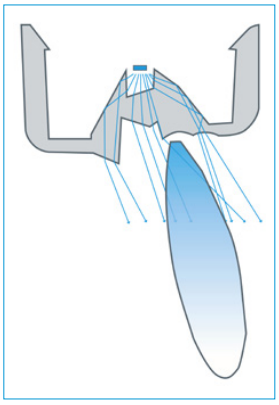
- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is part of an A+ Certified solution for nLight® control networks when ordered with drivers marked by a shaded background*
- This luminaire is part of an A+ Certified solution for nLight control networks, providing advanced control functionality at the luminaire level, when selection includes driver and control options marked by a shaded background*

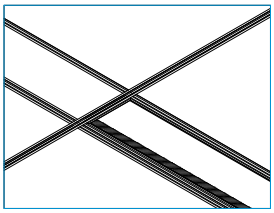
To learn more about A+, visit www.acuitybrands.com/aplus.

*See ordering tree for details

Optics
Slot LED's patent-pending, precision lumen DIRECTIR optics condition and refract light to deliver accurately controlled, striation-free, and uniform white light. All lumen DIRECTIR optics are injection-molded, optical grade, UV-resistant acrylic with selective finishing/polishing treatment.







Wall Wash (WW)

Certification
CSA tested to UL 1598 standards.

Listings
DesignLights Consortium® (DLC) qualified product. Not all versions of this product may be DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

Warranty
5-year limited warranty. Complete warranty terms located at:
www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx

Note: *Actual performance may differ as a result of end-user environment and application.*
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

Photometry
For photometric information refer to www.marklighting.com.

marklighting.com | 888-834-5684 | ©2017-2019 Acuity Brands Lighting, Inc. All Rights Reserved. We reserve the right to change design, materials and finish in any way that will not alter installed appearance or reduce function and performance.

Design2Ship™ Program Details

1. All Quick Ship orders should be activated through Agile.
2. Ship dates are 5 business days from date of clean release. Order lines must process and code upon entry, if you have an UNK, NCI or BOM status, re-check your spec sheet to correct nomenclature.
3. All order received after 3:30pm EST will be processed the next business day and will receive an ESD from that date.
4. All purchase orders must be clearly identified as Quick Ship. Non-Quick Ship products should be ordered on a separate purchase order.
5. Orders with both Quick Ship products and non-Quick Ship products will default to the longest lead-time.
6. If an order exceeds the product specification sheet quantity, then the following shall apply:
   a. If less than or equal to 2 times maximum Quick Ship quantity, the order will be split into two delivery dates. The first will go in 5 days followed by the second in 10 days.
   b. If the order is more than 2 times maximum Quick Ship quantity, then the order would not qualify as a Quick Ship order.

MAXIMUM QUANTITY OF 500 LINEAR FEET PER ORDER

7. Changes to the order is not permitted.
8. Cancellation after release will result in a 50% restock fee, minimum.
9. Order requirements:
   a. Complete ship to address
   b. Contact information
   c. Complete Quick Ship catalog number
   d. Pricing and commission rate
   e. Any shipping notes / site restrictions

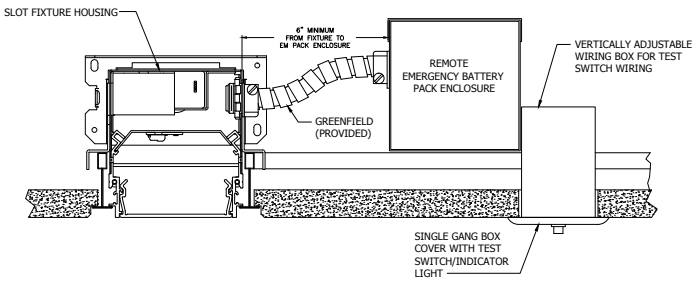
Remote Emergency Battery Mounting



Notes

- Delivers 700 lumens per 4FT length. Default location is the right side of fixture and end of run.
- Provided with 4FT of flexible conduit. Maximum of 25FT remote distance if extended. Extension provided by others.

nLight Air Wireless

To Make fixture NLTAIR2 compatible the following components are required:

1) rpp20 D
2) rPODB 2P DX

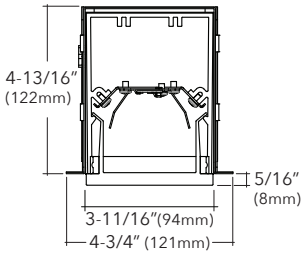
PINNACLE ARCHITECTURAL LIGHTING®

Project Name _____

Date _____ Type _____



EDGE EV3WET

3" Recessed Linear WET

Key Features

- Approved for wet location unless otherwise noted. IP65 and IK10 rated
- Fixture is built using corrosion resistant materials
- 6063-T5 Extruded aluminum housing
- Highly reflective die-formed white painted reflector
- All-inclusive module houses all LED system components in one compact unit
- Unit easily releases from the housing for room-side maintenance
- Wiring access available through bottom of housing
- 5-year limited warranty covers LED, driver and fixture
- UL and cUL listed
- Buy American Act compliant

Example Part #: EV3-WET-830HO-8'-IND-FLF-U-OL1-1-0-W

		50-3/4" (1289mm)				
			62-5/8" (1591mm)			
				74-5/8" (1895mm)		
					86-1/2" (2197mm)	
						98-3/8" (2499mm)

Position

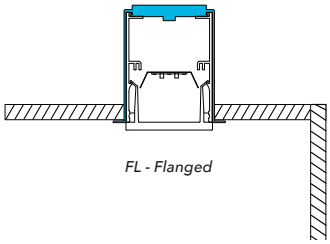
- When making rows with EDGE Wet, the rows must be ordered as individual units with a position specified
- Positions can either be "BOR" - Beginning of Row, "MOR" - Middle of Row, or "EOR" - End of Row
- The connection between fixtures is less than 1/8"
- For single, non-connected units, specify as "IND" for individual

IND	BOR	MOR	EOR
Individual Fixture	Beginning of Row	Middle of Row	End of Row

Mounting

- Available with standard 1/2" flange (FL)
- Utilize Surface Mount for in-wall application. Building surface waterproofing by others
- End trims and power cord attached at factory
- Approved for wet location unless otherwise noted
- Refer to installation instructions during installation at the jobsite

FL(F)	Flanged



FL - Flanged

Voltage

- Some EDGE Wet configurations will not accommodate all voltage options; consult with factory

U	Universal
1	120 volt
2	277 volt
3	347 volt

Driver

- Standard Driver Option = OL1
- Driver Lifetime: 50,000 hours at 25°C ambient operating conditions
- For more driver options see Pinnacle Resource Guide
- Some EDGE Wet configurations will not accommodate all driver options; consult with factory

OL1	Osram Optotronic 10%, 0-10v
OL2	Osram Optotronic 1%, 0-10v, nominal 1% dimming range
OL3	Osram Optotronic 347v 10%, 0-10v, requires 347v option
EE1	eldoLED ECOdrive 1%, 0-10v Logarithmic
EE2	eldoLED ECOdrive 1%, 0-10v Linear

PS1	Philips Advance Xitanium Step Dimming 50%/100%
ND	Non-Dimming

Specifications and dimensions subject to change without notice. Specification sheets that appear on pinnacle-ltg.com are the most recent version and supersede all other previously printed or electronic versions.

How to specify Circuiting, Battery and Emergency

1

- Select fixture circuiting from options below
- Some EDGE Wet configurations will not accommodate all circuiting options, consult with factory

Circuiting

1	Single Circuit
M	Multi Circuit
E	Emergency Circuit only
N	Night Light Circuit only

2 + **3**

- Battery and emergency section options are available in addition to fixture circuit
- Select battery and emergency section options below; factory shop drawing required
- Some EDGE Wet configurations will not accommodate all circuiting options, consult with factory

Battery and/or Emergency *If Required*

0	No battery or specific emergency section required

Battery

- Select battery section type if required, indicate total QTY. *Example 2P*
- 90 minute battery runtime; test button is integral to the fixture
- No battery option available for 2' lengths
- Entire direct fixture housing is on battery for lengths up to 5'
- Half of direct fixture is on battery for 6', 7' or 8' housing lengths
- For more battery options available, see Pinnacle Resource Guide

For Approximate Battery Lumen Output
- Multiply battery wattage X fixture LPW shown on Lumen Table
- 92.3 (LPW) x 10 (watts) = 923 battery lumen output

0	No battery
_P	Philips Bodine 10w Integral
_I	Iota 10w Integral
_IC	Iota 10w Integral *CEC Listed*

Emergency

- Select emergency section type if required, indicate total QTY. *Example 1E*
- Combine battery and emergency section ordering codes if both options are selected

_E	Emergency circuit section
_N	Night Light circuit section
_L	Life Safety circuit section NO THROUGH WIRE
_G	Philips Bodine GTD, Generator Transfer Device section

Battery OR Emergency Ordering Examples
- Single circuit, 10w Integral Battery — Ordering Code: 1-1P
- Emergency only, 10w Integral Battery — Ordering Code: E-1P
- Single circuit, GTD required — Ordering Code: 1-1G

Combination Section Ordering Examples
- Single circuit, (1) 10w battery, (1) emergency section — Ordering Code: 1-1P1E
- Multi circuit, (2) 10w battery, (2) emergency sections — Ordering Code: M-2P2E
- Single circuit, (1) night light section — Ordering Code: 1-1N

Finish

- Standard powder-coat textured white, metallic silver, textured black, graphite or bronze painted finish; consult factory for chip of standard paint finishes
- Selecting a fixture finish other than white may impact lumen output; consult factory for more information

W	White
S	Metallic Silver
BL	Textured Black
GR	Graphite
BR	Bronze
CC	Custom Color

Specifications and dimensions subject to change without notice. Specification sheets that appear on pinnacle-ltg.com are the most recent version and supersede all other previously printed or electronic versions.

Fixture Options

- Additional options to enhance the fixture and finish of the product
- Consult factory for MR16 configurations

GLR	Internal Fast Blow Fuse
EPF	End Power Feed

Controls

- Pinnacle is able to accommodate different control solutions from different manufacturers. Consult Factory for more information.

For all available IES files, please visit our website at pinnacle-ltg.com. Photometry testing in accordance to IESNA-LM-79-08 at an NVLAP accredited testing laboratory. Testing conducted at 25°C ambient conditions

Applications & Certificates

Construction 6063-T5 extruded aluminum housing with welded ends. Internal lens gaskets seal housing to prevent moisture and debris from entering the fixture. Pressure equalizing vent allows fixture to "breathe" preventing condensation.

Shielding Solid acrylic diffuse snap-in lens with matte finish with an EPDM gasketed for complete wet seal.

Mounting Fixtures can be installed individually or connected for a continuous run appearance. IND fixtures are individual fixtures and have no joining holes. IND fixtures cannot be joined. BOR fixtures are used for beginning of row and have joining holes on non-power end of fixture. MOR fixtures are used for middle of row and have joining holes on both ends of fixture. EOR fixtures are used for the end of a row and have no joining holes on power end of fixture. Consult factory for detailed installation instructions.

LED 25°C test environment. Lumen output/wattage has a margin of +/- 5%; 2' or 3' lengths may have a greater wattage deviation. All luminaire configurations tested in accordance with IES LM-79. Diodes tested in accordance with IES LM-80. Lifetime calculated using IES TM-21. Minimum lifetime greater than 60,000 hours. Lifetime Projection L70 = 123,100 hours and L90 = 36,700 hours. MacAdam 3-Step Ellipses. Not all products are Lighting Facts listed. For all available IES files, please visit our website at pinnacle-ltg.com.

CRI, CCT & Lumen Output Two lumen packages available. Standard and High (HO). Custom outputs are available. Specify custom lumens or watts between standard offering listed on CRI, CCT & Output page. 80 CRI is available for 3000K, 3500K, and 4000K. 90 CRI is available for 2700K, 3000K, 3500K, and 4000K. 80 CRI = R9≥19 and 90 CRI = R9≥61.

Voltage Universal (U), 120 volt (1), 277 volt (2) and 347 volt (3) options available. Must specify OL3 in Driver section when 347 volt (3) is selected. Some EDGE Wet configurations will not accommodate all voltage options; consult with factory.

Driver Standard Driver Option is Osram 0-10V, 10% = OL1. Electronic driver, Power factor is >0.9 with a THD <20%. Driver Lifetime: 50,000 hours at 25°C ambient operating conditions. Ambient operating range: -20°F/-30°C to 122°F/55°C. For more driver options, see Pinnacle Resource Guide. Some EDGE Wet configurations will not accommodate all driver options.

Circuiting Select from single circuit (1), Multi circuit - For multiple circuiting and zone control, requires factory shop drawing (M), Emergency circuit (E) or Night Light circuit (N). For emergency circuiting situations that require no through wire or circuit separation, Life Safety Circuit should be selected. This will provide a separate power feed and only the Life Safety Circuit in that section. Some EDGE Wet configurations will not accommodate all circuiting options; consult with factory.

Battery & Emergency Select battery or emergency options if required. If battery or emergency option is not required, enter 0. Battery duration is 90 minutes as standard. Test button is integral to fixture. For more Battery options, see Pinnacle Resource Guide.

Finish Standard powder-coat textured white, metallic silver, textured black, graphite or bronze painted finish; consult factory for chip of standard paint finishes or for additional custom color and finish options.

Controls Consult Factory

Labels UL and cUL Listed, approved for wet location unless otherwise noted. IP65 and IK10 rated.

Buy American Act Compliant

Warranty EDGE Wet LED offered with a 5-year limited warranty. Covers LED, driver and fixture.

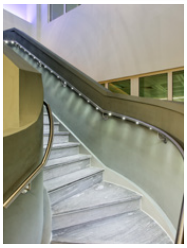
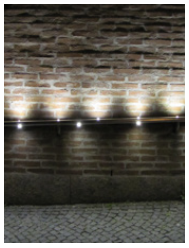
ZETA750





Description

The ZETA750 Series Puck is the most flexible and vandal resistant LED handrail lighting module on the market, offering unrivalled uniformity and photometric performance. Designed with the specifier in mind, it accommodates a wide range of options of beam distribution for a clean design.

The pucks can be installed in new handrail or retrofitted into existing handrail, flat or oval metallic structures and surfaces. Powerful yet small and unobtrusive, makes the Handrail Puck ideal for incorporation into street sculptures, illuminating artwork or to wash walls with clean, white LED light.

The ZETA750 is engineered of electroplated 316 stainless steel. Other custom materials are available including aluminum, brass, and super-duplex stainless steel (which offers exceptional corrosion resistance), as well as custom painted finishes. Please consult factory for these custom options.

At standard handrail height the pucks provide 11 foot-candles at the surface below. They are offered with wide, narrow, and asymmetric beam patterns. ETL wet rated for outdoor applications. For round handrail, the LED pucks are field installed with use of the ZETA750 series Drill Tool Kit. For flat surfaces, the installer may use their own drill bits and threading taps. Please refer to the installation instructions.

Housing

Extremely durable 316 stainless steel marine grade housing, with 3.5" (90mm) 20AWG wire leads. Choice of Thin Wall (recommended for ease of installation), or Heavy Wall. Curved face or flat face options available in three different beam patters 60°, 90° asymmetric, and 120°.

Mounting

Type of Surface- Install in metallic surface only for proper thermal dissipation. Luminaire is for use in non-insulated recessed surfaces.
Fits Railing size - Ø38.0mm, 1.496in to 100.0mm, 3.937in.
Thin Wall Puck minimum wall thickness - 1.5mm, 0.059in.
Heavy Wall Puck minimum wall thickness - 2.5mm, 0.980in.
Minimum distance between lights - 101.6mm, 4.000inches (center to center). Max 16 lights may be connected in series.

Electrical / Led Driver

- 3VDC, 500mA, 1.5W (Remote Driver Required)

Listings

- ETLus Listed to UL2108 (suitable for wet locations)
- cETL Listed to CSA C22.2 #250.0
- Impact tested to IK10 (EN62262)
- IP66 rated
- ADA Compliant when using handrail diameter 31.75mm (1.25") to 38.1mm (1.5") O.D.

ZETA750 Tool Kit - For Round Handrail

*** Not shown, wire crimping pliers.**

1 1 x drill jig with clamp
2 1 x drill clutch assembly with 15 + 16mm cutters
3 1 x drill tap assembly with M16 x 1 tap
4 1 x M16 x 1 tap (spare)
5 1 x File
6 2 x 15mm cutters (spares)
7 1 x 16mm cutter (spare)
8 2 x cutter removal tools
9 1 x 10mm nut driver
10 1 x 2mm Allen key kit
11 1 x insertion tool
12 1 x bottle of cutting fluid

*** Not shown, wire crimping pliers.**

Rental Procedures and Fees

- Tool Kits are rented for a period of 30 days from time of shipping.
- Kits will need a separate PO for the cost to replace the kit as a DEPOSIT to be invoiced if not returned on time or in working order.
- No invoice will be issued if Kit is returned within allotted time inspected for to ensure noting is missing and it is operable.
- A non-refundable / non-negotiable RENTAL FEE for consumables and labor is charged for every order.
- Consult factory for fees as they are subject to change.

Flat Surfaces - No Toolkit Required

- For thin wall pucks: Drill 15mm hole in mounting surface; then thread 15mm hole using M16x1mm tap.
- For thick wall pucks: Drill 15mm hole in mounting surface; drill 16mm counterbore 1.8mm deep; then thread 15mm hole using M16x1mm tap.
- Drill bits/taps provided by others.

Title 24 JA8 2016 Compliant

CLOSET RA TED

Intertek

FLEX DC® 30 is a high performance flexible LED fixture suitable for use in coves, under cabinets, in shelves, in-grade, and virtually anywhere a linear fixture is required.

ELECTRICAL

Input Voltage	24VDC
Dimming Options	• PURE DC™ • MLV • 0-10V • DMX • Lutron (2-WIRE, 3-WIRE, EcoSystem)
Power Consumption	3.0 Watts per foot
Wire Size	18AWG, 2 wire
Certification	**ETL** - Conforms to UL Std. 2108; Certified to CSA Std. C22.2 No. 9.0. **Closet Rated** - Suitable for installation in the storage area of a clothes closet when used in Optic Arts® channel.

PHYSICAL

Field Cuttable	Every 1.97"
Operating Temperature	-40° C (-40°F) to +70°C (+158°F)
Environment	**IP40** - Dry Location **IP68** - Wet Location
Maximum Run Length	**IP40:** 32', **IP68:** 32'
Dimensions (WxH)	**IP40 -** 0.31" (8.0mm) x 0.12" (3.2mm) **IP68** - 0.41" (10.4mm) x 0.18" (4.5mm) **IP68 Endcaps -** 0.50" (12.70mm) x 0.31" (7.87mm)

APPENDIX B: LIGHTING CUTSHEETS Note: This document is for information only. Refer to specifications for all catalog numbers, etc.

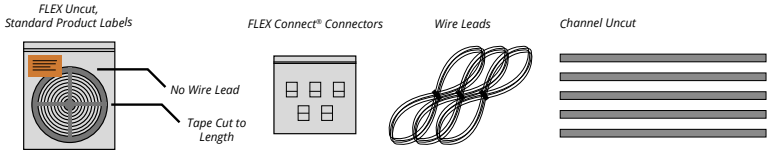
CONFIGURATION TYPES

① FLEX cut to length with FLEX Connect® Power Feeds for Field Termination, Channel uncut for field cutting

- Specify ***FLEXConfig-1***
- Specify FLEX type and channel type
- FLEX factory cut to length, but not terminated
- One FLEX Connect® power feed connector and 6' lead provided per FLEX run
  - Uncut rolls of lead wire can also be provided (see page 8 for part #)
- Channel shipped uncut for field cutting.
- Specify number of butt splices (not shown - see page 8)
- IP68 not available in ***FLEXConfig-1***
- JA8 2016 not available in ***FLEXConfig-1***
- ***FLEXConfig-1*** is quick ship if run lengths are provided at time of order. Take offs, if needed, will add lead time.
- The below channels are ***NOT*** compatible with FLEX Connect®:

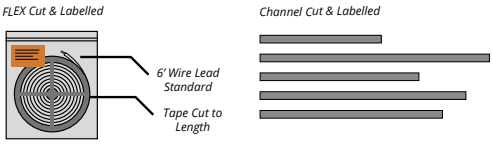
Slim:
- *CHS-R-1208*
- *CHS-R-1715*
- *CHS-C-1616*
- *CHC-S-1921*

Specialty:
- *CHSP-R-2970*
- *CHSP-S-1618*
- *CHSP-STEP-8142*



② Cut To Length With Soldered Leads, Assemble On-Site [1, 2, 3]

- Specify ***FLEXConfig-2***
- Specify FLEX type and channel type
- Specify run lengths
- IP68 only available in ***FLEXConfig-2***
- If no config is specified, and run lengths are provided, ***FLEXConfig-2*** will be used

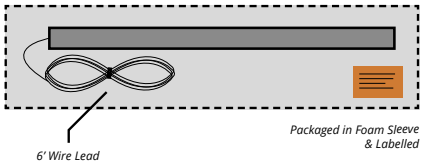


③ Pre-Assembled Factory Finished Fixtures [1, 2]

- Specify ***FLEXConfig-3***
- Fully assembled fixture
- ETL stamped and listed as a fixture
- 6.50' max length
- Standard 6' power lead unless otherwise specified
- The below channels ***CANNOT*** be factory assembled:

Slim:
- *CHS-R-1208*
- *CHS-R-1715*

Wide:
- *CHW-R-2010*
- *CHW-S-2027*
- *CHW-S-7532*
- *CHW-S-2623*
- *CHW-S-3030*
- *CHW-S-3561*



NOTES:

1. Due to the nature of the FLEX DC® product, specific lengths may not fall exactly on a cutting point. In this case, Optic Arts® will always cut to the smaller dimension unless otherwise specified.

2. Unless otherwise specified, channel is cut 15mm longer than FLEX DC®.

3. Some on-site assembly required. See installation guides for details.

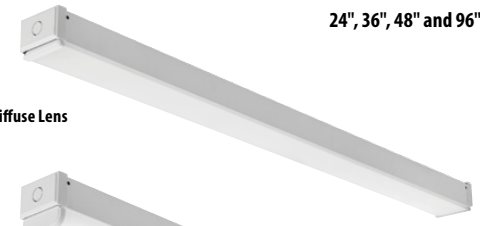
Catalog Number	
Notes	
Type	

LED Linear

CLX

24", 36", 48" and 96" Lengths



Flat Diffuse Lens

Round Diffuse Lens

Wide Diffuse Lens

FEATURES & SPECIFICATIONS

INTENDED USE — The CLX is a linear lighting solution that is available in multiple lengths, lumen packages and distributions. Designed for versatility, the CLX can address virtually any indoor lighting need. The CLX is also offered in standard and high efficacy configurations and capable of being continuous row mounted or installed as a stand-alone fixture. Ideal for uplight and downlight in commercial, retail, manufacturing, warehouse, and display applications. **Certain airborne contaminants can diminish the integrity of acrylic and/or polycarbonate.** Click here for Acrylic-Polycarbonate Compatibility table for suitable uses.

CONSTRUCTION — Channel and cover are formed from code-gauge cold-rolled steel. Housing and lens endcaps are injection molded plastic to provide a more architectural look and feel. The endcaps come standard with a 7/8" knock out for continuous mounting but can be ordered without.

Finish: Paint options include high-gloss, baked white polyester (WH), galvanized (GALV), matte black (MB) and smoke gray (SKGY). Five-stage iron phosphate pre-treatment ensures superior paint adhesion and rust resistance.

OPTICS — Offered with acrylic lens and less lens configurations. Provides a choice of optical distributions including, wide, narrow, and aisle.

ELECTRICAL — Utilizes high-output LEDs integrated on a two-layer circuit board, ensuring cool-running operation. Optional internal pluggable wiring harness for reduced labor cost in row mounting applications. (See PLR_ ordering information on page 15.) Electronic LED driver is multi-volt input and 0-10V dimming standard (see Operational Data on page 12 for actual wattage consumption). This fixture is designed to withstand a maximum line surge of 2.5kV at 0.75kA combination wave for indoor locations, for applications requiring higher level of protection additional surge protection must be provided.

L70>100,000 hours at 25˚C.

LEDs provide nominal 80 CRI or 90CRI at 3000 K, 3500 K,4000 K, or 5000 K.

Lumen output up to 2,500 lumens per foot.

INSTALLATION — Fixture may be ceiling or wall mounted (with or without THCLX hanger or angle mounted with CLXANGBRT), pendant or stem mounted with appropriate mounting options.

WARNING — Removing the lens and opening the fixture during installation exposes the LEDs, putting them at risk for damage.

If you plan to surface mount the fixture, we recommend using the THCLX. This eliminates the need to open the fixture.

If you plan to continuous row mount, we recommend using the PLR wiring harness option. This eliminates the need to open the fixture.

Damage to the LEDs caused during installation will not be covered under the warranty.

LISTINGS — CSA certified to US and Canadian safety standards. For use in damp locations between -4°F (-20°C) and 104°F (40°C). Optional High Ambient (HA) ranging to 122°F(50°C) available on certain lumen packages (See ambient temperature chart for additional information).
DesignLights Consortium® (DLC) Premium qualified product and DLC qualified product. Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

WARRANTY — 5-year limited warranty. Complete warranty terms located at: www.acuitybrands.com/resources/terms-and-conditions

Note: Actual performance may differ as a result of end-user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

Stock configurations are offered for shorter lead times:

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and out-of-the-box control compatibility with simple commissioning.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is part of an A+ Certified solution for nLight® or XPoint™ Wireless control networks marked by a shaded background*

To learn more about A+, visit www.acuitybrands.com/aplus.

*See ordering tree for details

Options

PS1050	Emergency battery pack, 10W, CA Title 20 Noncompliant[2,11,13,16,17]
E10WLCP	Emergency battery pack, 10W Linear Constant Power, Certified in CA Title 20 MAEDBS[2,11,13,16,17]
BGTD	Generator transfer device, not avaialble with PS1050[13,16,18]
OCS	5', 18/3 Reloc selectable One Pass cable[16]
HA	High ambient, for use in ambient temperatures up to 50°C[11]
EPNKO	Decorative endplate, no knock out[19]
OUTCTR	Wiring leads pulled through back center of fixture[20]
OUTEND	Wiring leads pulled through end of fixture[21]
Cord Sets:	
CS1W	Staight blade plug, 120V[10,16]
CS3W	NEMA twist-lock plug, 120V[10,16]
CS7W	Staight blade plug, 277V[10,16]
CS11W	NEMA twist-lock plug, 277V[10,16]
CS25W	NEMA twist-lock plug, 347V[10,16]
CS97W	NEMA twist-lock plug, 480V[10,16]
CS93W	600V SEOOW white cord, no plug (no voltage required)
CS6G16STOWD5D	6' white cord, 16/5, no plug, includes low voltage dimming wires (no voltage required)[15]
PLR___	Plug-in wiring, see page 16 for ordering information
PLR1LVG	Plug-in wiring,low voltage dimming[22]
RRL___	RELOC®-ready luminaire. See page 15 for ordering information
SPD	Surge protection device, provides up to 6kV protection[16,20]
USPOM	Assembled in the United States
nLight® Wireless:[23,24]	
NLTAIR2 RES7	nLight® Generation 2 enabled PIR integral occupancy sensor with automatic dimming photocell
NLTAIR2 RES7PDT	nLight AIR Generation 2 enabled dual technology integral occupancy sensor with automatic dimming photocell
NLTAIR2 RIO	No sensor control
nLight® Wired:[23,25,26]	
N100	nLight® without lumen management
NES7	nLight® nES 7 PIR integral occupancy sensor[27]
NESPDT7	nLight® nES PDT 7 dual technology integral occupancy control[27]
NES7ADCX	nLight® nES 7 ADCX PIR integral occupancy sensor with automatic dimming photocell[27]
NESPDT7ADCX	nLight® nES PDT 7 dual technology integral occupancy sensor with automatic dimming photocell[27]
Individual controls:[23,25]	
MSD7	PIR integral occupancy sensor
MSDPDT7	PDT 7 dual technology integral occupancy control
MSD7ADC	PIR integral occupancy sensor with automatic dimming control photocell
MSDPDT7ADC	PDT integral occupancy sensor with automatic dimming control photocell

Finish

WH	White
GALVW	Galvanized with white lens end caps
GALVB	Galvanized with black lens end caps
MB	Matte black
SKGYW	Smoke gray with white lens end caps
SKGYB	Smoke gray with black lens end caps

ZAC240	One adjustable aircraft cable with canopy 240" [28]
ZACFP240	One adjustable aircraft cable with feed (3 conductor) and canopy, 240" [28]
ZACFPD240	One adjustable aircraft cable with feed (5 conductor) and canopy 240" [28]
SQ_	Stem kit, 2" increments up to 48" [28]
THCLX ___	Tong hanger (Must specify color) (one pair) [29]
CLXANGBKT ___	Angle bracket, (Must specify color) (one pair) [29]
HC36	Hanger chain, 36" (one pair)
Sensors & Controls:	
LSXR	Sensor Switch ® LSXR occupancy sensor [30]
NPP16D	nLight® switching/dimming module
NPP16DER	nLight® switching/dimming module with emergency relay
rPP20D	nLight® air dimming/switching module
XPA CMRB0	XPoint™ Wireless 0-10V relay, external, 55°C max ambient
Reflectors:	
CLXRW24___	Wide decorative 24" reflector, (Must specify color) [31]
CLXRW36___	Wide decorative 36" reflector, (Must specify color) [31]
CLXRW48___	Wide decorative 48" reflector, (Must specify color) [31]
CLXRW96___	Two wide decorative 48" reflectors, (Must specify color) [31]
CLXRWU24___	Wide decorative 24" reflector with uplight, (Must specify color) [31]
CLXRWU36___	Wide decorative 36" reflector with uplight, (Must specify color) [31]
CLXRWU48___	Wide decorative 48" reflector with uplight, (Must specify color) [31]
CLXRWU96___	Two wide decorative 48" reflectors with uplight, (Must specify color) [31]
CLXRN24	Narrow 24" reflector, (Must specify color) [32]
CLXRN36	Narrow 36" reflector, (Must specify color) [32]
CLXRN48	Narrow 48" reflector, (Must specify color) [32]
CLXRN96___	Two narrow 48" reflectors, (Must specify color) [32]
Wireguards:	
WGCLX24___	24" wireguard, (Must specify color) [33]
WGCLX36___	36" wireguard, (Must specify color) [33]
WGCLX48___	48" wireguard, XX, (Must specify color) 96" fixture requires two [33]

Notes

1 Not available with OUTCTR option.
2 Not available with HA option.
3 Not available with SEF when ordered in combination with EZ1.
4 Not available with NLTAIR2 RES7, NLTAIR2 RES7PDT, or NLTAIR2 RIO.
5 Not available with EZ1 when ordered with L24 with 5000LM or L36 with 7500LM.
6 When ordered with L24 only available with 1500LM or 2000LM in combination with GZ10 driver. Not for use with THCLX, CLXANGBKT, CLX reflectors or WGCLX accessories. Not available with RDL lens options.
7 Only available with general distribution.
8 Not available with CLXRN accessories.
9 Available L/LENS only.
10 Not available with PS1050, E10WLCP, or BGTD.
11 Not available with BGTD option.
12 Voltage selected utilizes a step-down transformer. Not available with L24 when ordered with N100.Not available with PS1050, E10WLCP or BGTD option.
13 Requires SPD option.
14 When continuous row mounting, fixtures must all have the same driver selection.
15 Not available with Individual controls, nLight wired networking, nLight wireless networking, nLight wireless zone control options.
16 Must specify voltage.
17 Not available with L24 or L36. Not available with L48 in combination with N100.
18 Available with L48 or L96 only. 20 Not available with PS1050 or E10WLCP options. Not available with 208 or 240V. Not available Individual controls, NLight Wired, or NLight Wireless options.
19 Not available OUTEND.
20 Required with PS1050, E10WLCP, BGTD, XAD, or XAD924.
21 Not available with PLR options.
22 Not available with XPoint, Individual controls, NLight Wired, or NLight Wireless options.
23 Sensor housing will be the same color as lens end caps.
24 Not available with L24 in combination with 5000LM, not available with L36 in combination with 7500LM, not available with L48 in combination with 10000LM, and not available with L96 in combination with 14000LM, 18000LM, or 20000LM. Not available with PLRs containing low voltage dimming wires.
25 Not available with any other control option. Requires EZ1.
26 Only available in WDL.
27 Requires N100 option.
28 Ships standard as white.
29 Not available with louver, wireguards, wide reflectors.
30 More configurations on LSXR Specification Sheet.
31 L24 reflector is 22.65", L36 reflector is 34.01", L48 reflector is 46.80", L96 comes with two L48 reflectors.
32 For use with L/LENS fixtures only. L24 reflector is 22.75", L36 reflector is 34.20", L48 reflector is 46.85", L96 comes with two L48 reflectors.
33 Not for use with CLX wide reflector accessories.

OPTIONS AND ACCESSORIES

Narrow reflector
Ships separtely from fixture.
Order as:
CLXRN24___

RRL - RELOC®-Ready Luminaire

- RRL connectors can be used with Quick-Flex®, System 820 and OnePass® systems.
- Load side of connector factory installed to luminaire.
- 4-pole mating connector with push-in terminations allows for simple installation.
- Touch-safe design on both halves meets UL/CSA requirement.
- Wiping contact design allows safe disconnect under load.

ORDERING INFORMATION Lead times will vary depending on options selected. Consult with your sales representative. **Example**: RRLA

Series		Wiring instructions	
RRL	RELOC®-ready luminaire	A	Hot conductor wired to position #1 (phase A)
		B	Hot conductor wired to position #2 (phase B)
		C	Hot conductor wired to position #3 (phase C) [1]

Compatible RELOC® Cables for Industrial Luminaires (ordered and shipped separately)

OCS

OCU

OD

DC

PT

Notes

1 C, ABE, and C12S options are not used with Quick-Flex QFC, QSFC, QPT, and QD.

PRODUCT INFORMATION

Advanced plug-in system with two-circuit capability. Available on industrial and strip products and a variety of architectural products mounted in continuous rows. 1, 2, 3 and 4-lamp fixtures. PLR22 (2-circuit) and crossover harness switches hot circuit serving next fixture in row. Reduces fixture types on job for alternating circuit applications (see example below.)

Easy one-step installation, saves up to 35% on labor costs. Expanded switching flexibility helps save energy.

Rows can be 50% longer with two-circuit systems. Polarized, lock-together nylon connectors prevent miswiring in the field. #12 THHN conductor, rated 600V, 90°C. White neutral wire included. Grounding accomplished by fixture in-row connectors.

CSA certified systems available with up to 2 circuits. G ground required.

Note: Specifications subject to change without notice.

Wiring

PLR

Advanced 1 or 2-Circuit Plug-In

ORDERING INFORMATION Lead times will vary depending on options selected. Consult with your sales representative.

Series	Number of hot wires		Branch circuits		Emergency circuit connected		Dimming		Ground	
PLR	(blank)	Not required for 22	Circuits to which ballast is connected				LV	Low-voltage dimming	G	Ground
PLR22	1	Black	(blank)	Not required for 22	(blank)	No emergency circuit				
	2	Black and red	A	Black wire	ELA	Emergency circuit wired to black wire				
			B	Red wire	ELB	Emergency circuit wired to red wire				

Typical Applications

- Multiple-circuit and single-circuit for longer continuous rows
- Multiple-circuit with alternating fixtures on separate circuits and 2-circuit (PLR 22)
- Multiple circuit with night-lights located along row as desired

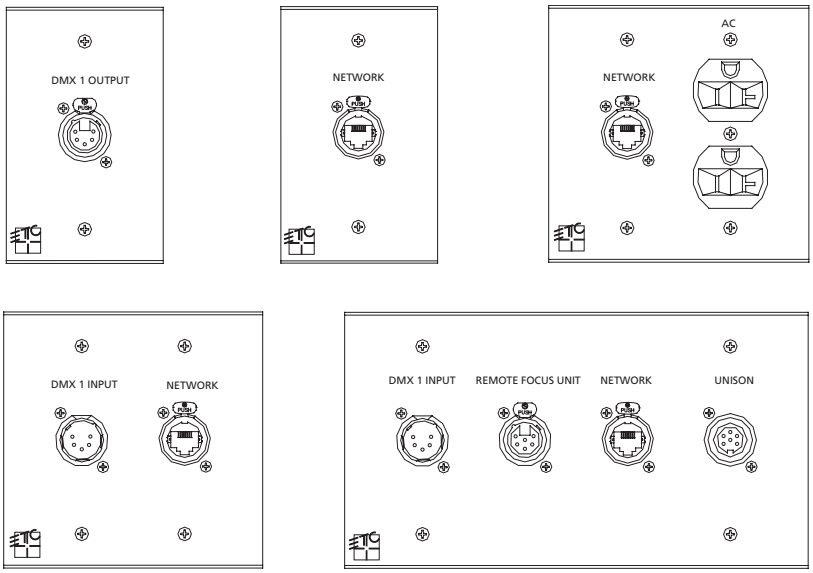
ETC

Plug-In Stations

Control Series



GENERAL INFORMATION

Electronic Control Plug-in Boxes or ECPBs allow lighting controls to connect and operate lighting and other equipment. Connections vary from industry standard DMX512 and Ethernet to portable houselight control and remote control devices.

APPLICATIONS

- An integral part of any complete lighting system installation:
  - Theatres and auditoriums
  - Television Studios
  - Houses of Worship
  - Museums
  - Casinos
  - Hospitality

FEATURES

- Surface or flush mount options
- Fits in most standard back boxes depending on variation
- Data options include:
  - DMX512 Input or Output
  - Remote Focus Unit (RFU)
  - Ethernet Network
  - Portable Unison station
  - Serial or computer interface
  - AC power option (voltage barrier required)

SPECIFICATIONS

GENERAL

- Consist of the appropriate connectors required for the functional intent of the system
- Available with DMX input or output, Remote Focus Unit (RFU), Network, or architectural control connectors

CONNECTOR OPTIONS

- Following standard connectors available for Plug-in Stations:
  - 5-Pin male XLR connectors for DMX input
  - 5-Pin female XLR connectors for DMX output
  - 6-Pin female XLR connectors for RFU connections
  - RJ45 connectors for Network connections - Twisted Pair
  - 6-Pin female DIN connectors for Unison connections
  - DB9 female serial connector for architectural control from a computer
- Custom combinations and custom control connections available.

ELECTRICAL

- Low voltage class 2 wiring
- Operating Voltage: 12/24V Direct Current
- Barriers provided when line-voltage and Class 2 controls are ganged together in the same wallbox
- Terminal block supplied for contractor terminations

PHYSICAL

- Faceplates are .80" aluminum
- Finished in fine texture, scratch-resistant black powder coat
- White silk-screened graphics standard; engraving or custom legends available
- Mounts in an industry standard flush mount back box (supplied by others),
- Surface mount back boxes available from ETC
- Optional U-Bolt Kit for pipe mounting

PHYSICAL

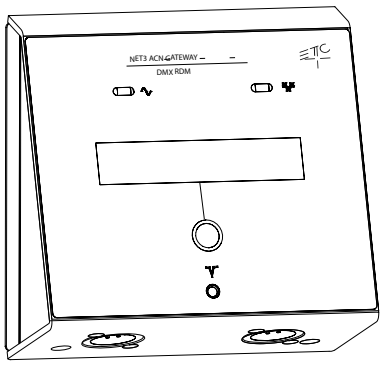
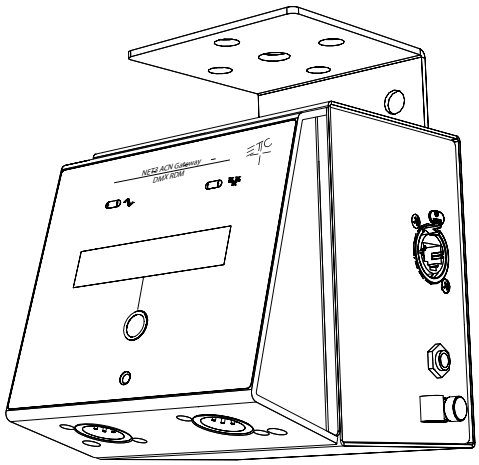
ETC®

DMX/RDM Two-Port Gateway

PoE 802.3af

Net3™ Gateway Series





GENERAL INFORMATION

The DMX/RDM Two-Port Gateway provides network data distribution of RDM and data-level information. Built on the reliability and quality of ETC's Network development, DMX/RDM Gateways are built for the industry-standard ACN protocol. The Gateway is an Ethernet device that uses bidirectional communication with other network devices to send and receive DMX512 and RDM data, as well as ACN/sACN.

APPLICATIONS

- Roadhouses
- Touring
- University/professional theaters
- Convention halls
- Tech tables
- Stage manager panels
- System integration

FEATURES

- Distributed DMX and RDM over Ethernet
- Supports Net3 protocol powered by ACN
- DMX/RDM Output/Input
- Distributes DMX data to any input/output device
- Two DMX connections using 5-pin Male or Female XLR
- LCD screen for labeling, status and configuration information
- Power and Network status indicators
- Power over Ethernet (PoE) or external DC power supply
- Configurable using Net3 Concert software or directly from ACN

ORDERING INFORMATION

Net3 Two-Port Gateways

MODEL	DESCRIPTION
N32G-2F	Two-Port DMX/RDM Output Install Gateway
N3T2G-2F	Two-Port DMX/RDM Output Touring Gateway
N32G-2M	Two-Port DMX/RDM Input Install Gateway
N3T2G-2M	Two-Port DMX/RDM Input Touring Gateway
N32G-2T	Two-Port DMX/RDM Rear Terminal Install Gateway

Net3 Two-Port Gateway Accessories

MODEL	DESCRIPTION
N32G-BB	Surface-Mount Two-Gang Back Box
UBOLT	Touring Gateway U-Bolt Hardware Kit
400CC	Touring Gateway C-Clamp Hardware Kit
N3GA-PS	Net3 Gateway Universal Power Supply*

*N3GA-PS includes plugs for United States/Japan, Europe, Great Britan, and Australia/China. Used with Net3 Four-Port, Two-Port, Show Control and I/O Gateways.

SPECIFICATIONS

GENERAL

- Distributes DMX over Ethernet with any compatible input or output device
- RoHS Compliant (lead-free)
- CE compliant and ETL LISTED

FUNCTIONAL

- Supports Net3/ACN (ANSI E1.31 and E1.17)
- Supports RDM (ANSI E1.20)
- Supports USITT DMX512-A (ANSI E1.11)
- USITT DMX512 and ANSI E1.11 DMX512-A compliant
- Compliant with IEEE 802.3i for 10BASE-T, 802.3u for 100BASE-TX and 802.3af for Power over Ethernet
- Advanced Input Patch (AIP) allows any incoming address to be associated with any sACN address
- Flexible Output Patch (FOP) allows a 512 address universe to begin at any output address
- Support for per-address or per-universe level priority

MECHANICAL

- Fabricated from 16-gauge cold-rolled steel
- Black, fine-textured, scratch-resistant, powder-coat finish
- Two integrated DMX Input or Output ports
- Menu button for backlight/paging control
- Backlit LCD display for identification and status reporting:
  - Gateway identification
  - Network configuration
  - DMX port configuration
  - DMX port status
  - RDM configuration
- Front and rear power and data indicators
  - Blue power indicators
  - Green network activity indicator
- RJ45 for connection to lighting network
- Reset button for hard reset or forced reboot
- Flush-mount using standard two-gang back box (Raco 691 with half-inch-minimum mud ring or Raco 696 deep box)
- Surface-mount back boxes available form ETC (4105A2002)
- Hanging bracket and connectorized back box included with Touring version (C-clamp and U-Bolt hardware available)

PROCESSOR

- Maximum delay time from input to output not greater than one packet time
- Selectable DMX refresh rate with a maximum at least 40Hz

ENVIRONMENTAL

- Ambient operating temperature: 0° to 40°C (32° to 104°F)
- Operating humidity: 5% - 95% non-condensing
- Storage temperature: -40° to 70°C (-40° to 158°F)

POWER

- Supports IEEE802.3af Power over Ethernet or optional 8-28Vdc external power supply
- Maximum power consumption: 5 watts

DMX PORTS

- Two integrated 5-pin XLR connectors
- Software-configurable for input or output
- Fully optically-isolated input from the Gateway electronics
- Withstands fault voltages of up to 250VAC
- Integrated DMX/RDM termination

SPECIFICATIONS

CONFIGURATION

- Net3 Mode configuration provided by Net3 Concert software or directly from ACN
  - Supports up to 512 DMX addresses per port
  - Supports up to 63,999 Streaming ACN universes
- Up to 1,024 channels of data input or output
- DMX data input or output configurable by user
- Multiple outputs of a single DMX universe (DMX splitter) from a single Gateway
- Supports discrete DMX universe outputs per port
- Multiple sources may be combined to the network with each source or address allowed an independent priority
- Individual port start address and offset
- User-configurable labeling

ADDITIONAL INFORMATION

DMX512

Often shortened to DMX (Digital Multiplex), this communication protocol is used mainly to control dimmers and multi-parameter fixtures. A universe of DMX is defined as 512 channels. DMX sends a nearly continuous stream of level information for each control channel. It is a form of RS-485 digital serial communication.

RDM

Remote Device Management (ANSI E1.20) is a protocol enhancement to DMX512 that allows low-speed bidirectional communication between a system controller and attached RDM devices over a standard DMX line. This protocol will allow remote configuration, status monitoring, and management of devices.

sACN

Streaming ACN (ANSI E1.31), sends DMX-style control over TCP/IP networks. It provides a fast and efficient mechanism to transport the well-understood DMX protocol over Ethernet using an industry-standard protocol.

ACN

Architecture for Control Networks (ANSI E1.17) is a standard for high-speed bidirectional communication over TCP/IP on Ethernet network infrastructure. ACN is an open suite of protocols used between network devices for the purposes of greater and more adaptive control.

NET3

ETC's enhanced implementation of the standard ACN Protocol Suite (ANSI E1.17 and E1.31) including additional communication protocols for specialized applications and support of legacy systems.

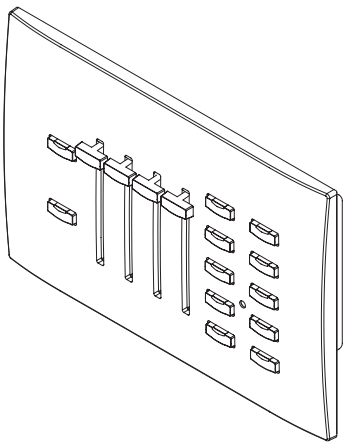
ETC Unison® Heritage™ Fader Stations

Unison Control Series



GENERAL INFORMATION

Elegant and clean-lined, Unison Heritage controls are designed to complement – not to compete with – the aesthetics of any interior environment, while being easy to install using LinkConnect. Artful but durable, Heritage stations are engineered to stand up to the daily abuse of busy public areas. The Unison Heritage series of button/fader control stations can be customized to suit any décor and application – available in a wide range of sizes, colors and configurations. Choose from pre-configured button/fader combinations or put stations together to create endless combinations of controls.

APPLICATIONS

- Churches
- Hotels
- Convention Centers
- Meeting Rooms
- Schools
- Restaurants

FEATURES

- LinkConnect – using Echelon® LonTalk® protocol with LinkPower, the two wire topology-free system gives you the freedom to put stations where you need them
- Fastener Free Faceplate System – no visible means of attachment
- ColorCondition – RGB LED's allow for customized control indication on a per button or fader basis, unlocking the conditional logic capabilities of a Unison control system
- Forever Legend System – complimentary colored standard or custom legend options using an indelible, laser-marking method
- RemoteDirect – built in InfraRed (IR) receivers on every station allow for optional IR remote control at every station location
- RealFade – physical slider controls for groups or zones with 1 to 16 faders per station, paired with up to 12 buttons
- LockOut – configurable control lockout from the push of a button
- Take Control – preset the faders on a Heritage fader station and then choose when to gain control of the lighting in a room, at exactly the right moment

Also available in surface mount (S) and portable (P) configurations. (Contact ETC)

SPECIFICATIONS

FUNCTIONAL

- UL and cUL LISTED
- CE Marked

FUNCTIONAL

- Operate default or custom system functions including preset selection, manual mode activation, record mode activation, station lockout, raise, lower, sequence control, zone on/off, room combine, macro activation and timed event override
- Fader functions include master, zone, fade rate, or preset
- Custom button and fader functionality programmable via LightDesigner configuration software
- Programmable electronic lockout levels
- Buttons allow programming of individual lockout levels.

MECHANICAL

- Standard configurations with 7 or 12 buttons and 4, 7, 10, 13 or 16 faders
- Support for 1-12 buttons and 1-16 faders for custom applications, contact ETC
- Enclosed electronics assembly
- Faceplate with no visible means of attachment
- 45mm slide potentiometer faders and cantilevered switch arrays with removable caps
- Flush mount in industry standard back boxes
- Surface mount back boxes available from manufacturer
- Constructed of injection molded, ABS plastic in five standard colors, matched to RAL standard colors
- Custom colors available with sample
- Indelibly marked legends in a contrasting color
- Integral RGB LED response indicator for each button and fader
- Integrated IR receiver

ELECTRICAL

- Connect via Echelon® LinkPower® control network utilizing low voltage Class II wiring
- Topology free and polarity independent wiring over Belden 8471 or equivalent, and (1) #14 ESD drain wire
- Wiring may be bus, loop, home-run or any combination of these
- All station terminations are connectorized.
- UL and cUL LISTED, CE marked

THERMAL

- Ambient room temperature: 0-40°C / 32-104°F
- Ambient humidity: 30-90% non-condensing

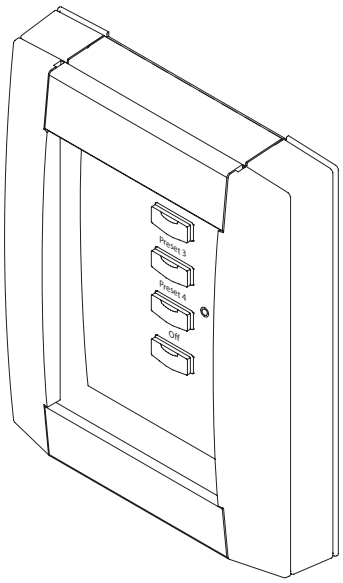
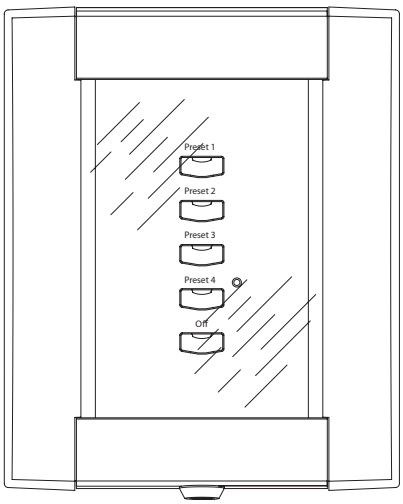
ETC Unison® Heritage™ Locking Cover

Unison Control Series





GENERAL INFORMATION

Elegant and clean-lined, Unison Heritage Locking Covers are designed to complement – not to compete with – the aesthetics of any interior environment. Artful but durable, Heritage Locking Covers are engineered to stand up to the daily abuse of busy public areas. A member of the Secure-It family of products, Unison Heritage Locking Covers are designed to prevent unauthorized use of Unison Heritage Button and Fader Stations, while providing protection for the station from accidental damage. Heritage Locking Covers are designed to allow easy access when required while providing visual feedback of the system status through a smoked polycarbonate window.

APPLICATIONS

- Churches
- Hotels
- Convention Centers
- Meeting Rooms
- Schools
- Restaurants

FEATURES

- Secure-It – Decide who has access to the lighting controls, locking out any unwanted actions, while protecting a Heritage Button or Fader station from external damage.
- Designed for use with all Unison Heritage Button, Fader and Keyswitch wall stations

SPECIFICATIONS

FUNCTIONAL

- For Flush-mount applications
- Mounts to industry standard flush-mount backboxes (by others)
- Accommodates mounting for upward or downward door opening
- Includes integrated locking cylinder
- Maintains functionality of Unison RemoteDirect Infrared remotes

MECHANICAL

- Standard configurations for 1 gang thru 7 gang applications
- Constructed of injection molded, ABS plastic endcaps with extruded aluminum rails in five standard colors, matched to RAL standard colors
- Smoked polycarbinate window with captive mounting
- Integrated key cylinder with two keys
- No visible means of attachment
- Mounts to industry standard back box (by others)
- Accommodates RemoteDirect Infrared remote transmission through polycarbonate window.

Lex PowerGATE™ Company Switch

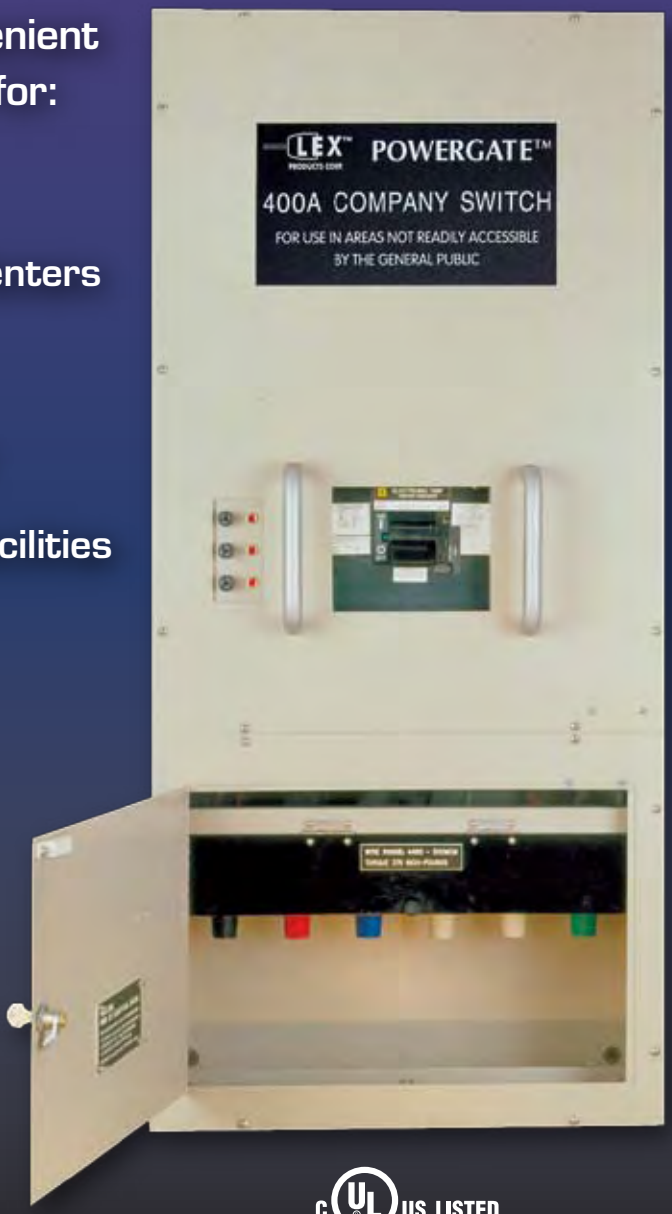
LEX PRODUCTS CORP.

We Deliver the Power™

FEATURING NEW CAM/LUG CONNECTION CHAMBER

Safe and Convenient Power Access for:

- Theatres
- Convention Centers
- Studios
- Theme Parks
- Recreation Facilities



c UL US LISTED

(U.S.A. and Canada)

US Patent
No. 7,136,278 B2

011508

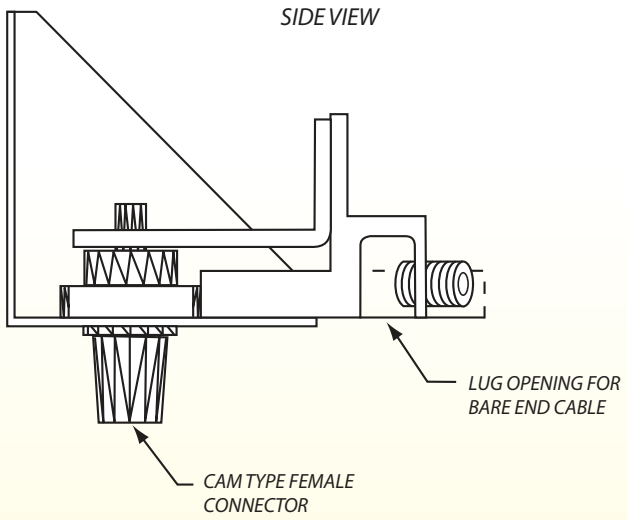
Features & Benefits

- **The cam and lug connections are interlocked to the main breaker through the access door so that neither cam nor lug connections can be made or broken under load.**
- **Because the PowerGATE™ Company Switch has one wiring chamber instead of two, the unit is far more compact.**
- **The unique arrangement of the cam and lug combination allows for both sets of cables to drape downward for a lower profile against the wall.**
- **Both cam and lug connections are behind the access door when in use, eliminating accidental disconnection, unauthorized acess and/or tampering with connections.**
- **An integral L.E.D. worklight is provided in the wiring chamber for ease of connection and enhanced safety.**

Square D Electronic Trip LEL Series Circuit Breaker

- The breaker has a 65,000 AIC (Amps Interrupting Capacity) rating. It will function even when subjected to a short circuit producing 65,000 Amps.
- The breaker is electronic trip 100% rated, unlike thermal magnetic breakers which are 80% rated.
- The 400 Amp Breaker can be reset to 200 Amp trip on the unit itself.
- An additional rating plug is available to reset the breaker trip rating at 100 Amps.
- The Breaker can be wired to display in a remote location.

Cam/Lug Connection Chamber



The exclusive cam/lug connection combination is at the heart of the PowerGATE™ Company Switch.

The detachable cam-type outlet and the direct wire lug have been combined in a compact and convenient arrangement, providing a host of unique features and benefits.

PowerGATE™ NEMA 3R Weatherproof Version

Company switches are great for outdoor events and productions, but they must be weatherproof.

Typically they have been mounted in a separate, bulky and expensive enclosure.

Lex Product's new NEMA 3R Weatherproof Version will save time, space and money, and most importantly, enhance the safety and convenience of any venue.

- Circuit Breakers and Connection Chamber are housed behind gasketed weatherproof door.
- Circuit Breaker door allows locking and limited access if desired.

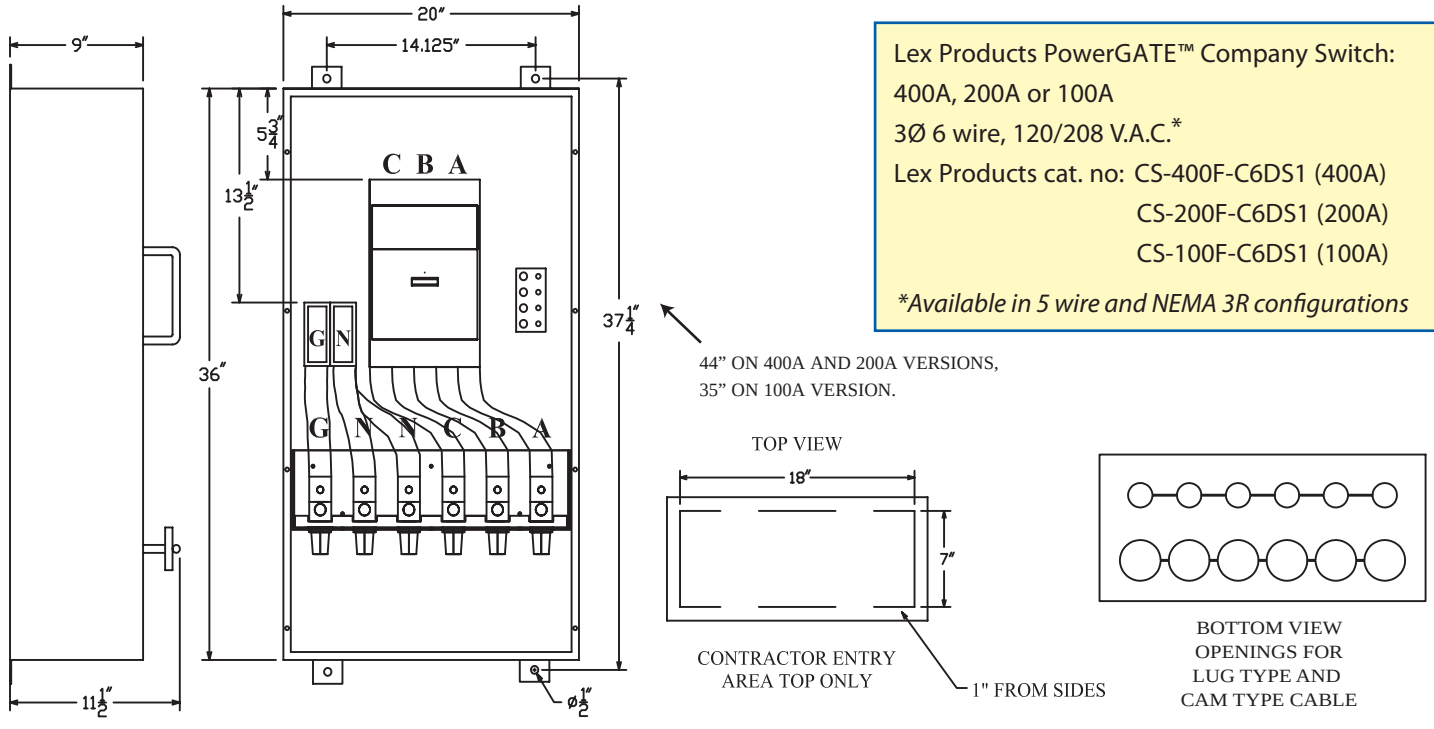
** For 5 wire, replace 6 with 5.*

Performance Specifications:

1. Unit shall be UL and CUL Listed and labeled.
2. The unit shall have a wiring chamber that contains both direct wire lugs and single pole cam output connectors.
3. Both Cam and lug cables shall drape downward when connected.
4. Cam and lug cables shall enter and exit the wiring chamber from access holes in the bottom of the enclosure.
5. A lockable hinged access door shall provide access to the wiring chamber, denying access to the connections when mated.
6. The access door shall engage the shunt trip mechanism of the main circuit breaker whenever it is not fully closed, so that connections cannot be made or broken under load.
7. The unit shall provide strain relief for lug cables exiting the bottom of the chamber.
8. Output lug connections shall accommodate a maximum of 250mcm cable.
9. A strip of white light-emitting diode worklight shall light the wiring chamber whenever the access door is not fully closed.
10. The unit shall contain (1) 100% rated 3 pole main circuit breaker with a 65K AIC rating.
11. Breaker shall be recessed beneath the plane of the front panel of the unit to prevent accidental operation.
12. Breaker shall be equipped with a padlock attachment to lock the handle in the off position when not in use.
13. The 400A breaker shall be resettable to 200 Amps trip on the unit. A separate plug shall be available to reset the 400A main breaker at 100 Amps.
14. The unit shall be equipped with light emitting diode indicator lights for each supply phase, labeled with NEC specified color-codes and alphabetic names of phases.
15. The unit shall further be supplied with a light emitting diode indicator light indicating supply to ground continuity, labeled with an alphabetic description and color coded green.
16. The ground connection shall be isolated from the frame.
17. Contractor connections to the main circuit breaker shall accept up to 500mcm wire.
18. Enclosure shall be fabricated from 14 gauge steel.
19. Enclosure shall have (4) welded mounting tabs.
20. When needed, the unit shall be UL and CUL Listed, as NEMA 3R Weatherproof.



Lex Products PowerGATE™ Company Switch:
400A, 200A or 100A
3Ø 6 wire, 120/208 V.A.C.*
Lex Products cat. no: CS-400F-C6DS1 (400A)
CS-200F-C6DS1 (200A)
CS-100F-C6DS1 (100A)

**Available in 5 wire and NEMA 3R configurations*

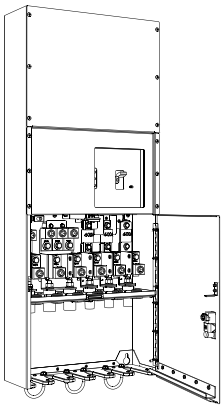
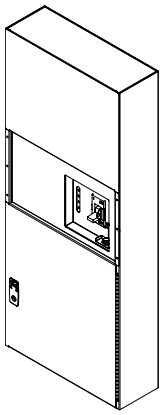
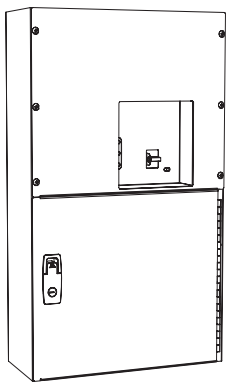
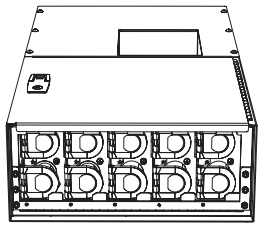
LISTED LISTED

Company Switch Series









GENERAL INFORMATION

PowerSafe Company Switches come in two models:

- PowerSafe Pro : 100A, 200A, 400A
- PowerSafe Compact : 100A, 200A

PowerSafe Pro sets a new standard in safety and size. It offers important new features: locking connection covers, shunt-trip-protected doors that can lock connection covers in place while output power is present, and lockout/tagout brackets.

PowerSafe Compact offers safety in a smaller size. This model does not include the connector chamber, dual neutral, tie-off, LED worklights or support for 400A capacity, which allows the PowerSafe Compact model to be more compact.

A fault-current-limiting option provides additional safety in the event of a short circuit, by limiting the energy available at the output of the switch. This option reduces the available fault current via ultra-fast current-limiting fuses, allowing safe connection of equipment with lower SCCR (Short Circuit Current Rating) and reducing arc-flash hazard.

In addition to safety features, both models provide 65kA SCCR ratings with 100% rated breaker for lighting, sound, scenery, and stage equipment.

FEATURES

PowerSafe Pro

- **PowerSafe compartment:** Protects against access to output connections while the cabinet is energized
- **Double Neutral**: Supports 200% rated neutral
- **LED Worklight Option**: Illuminates interior and output lugs

PowerSafe Compact

- **Safety bracket**: Locks access to hinged covers over all connections while the door is closed

All Models

- **Shunt trip safety interlock**
- **SCCR**: Provides 65,000A Short Circuit Current Rating
- **Iso Ground**: Allows field configuration of isolation between enclosure ground and equipment ground
- **Output Connections**: Accommodates single-pole cam-style connectors and up to 4/0 class K cables using 500kcmil screw terminal

GENERAL INFORMATION (CONT.)

FEATURES (CONT.)

- **Power Indicators**: LEDs light up to show that power is on/available between each phase and neutral
- **Lockout/Tagout**: Accepts third-party locks on built-in bracket for support of NFPA 70E safety lockout/tagout procedures

APPLICATIONS

Entertainment venues requiring temporary power, such as:

Theaters	Convention centers	Auditoriums
Exhibition halls	Studios	Performing arts centers
Arenas	Casinos	Stadiums

ORDERING INFORMATION

Company Switch

ENCLOSURE MODEL NUMBER	MAX BREAKER RATING	BREAKER OPTION
PSP	400A	400A 200A 100A
PSC	200A	200A 100A

Model Number Examples:

PSP-200 is a 200A PowerSafe Pro

PSC-100 is a 100A PowerSafe Compact

Options

PS-CL	Fault-Current-Limiting option
PS-FKIT	All Female cam-style Outputs*
PSP-SR	Strain Relief tie-off option for PowerSafe Pro**

*All company switches come standard with male, neutral and ground cam-style configurators. Designation of all female cam-style connectors is optional and must be specifically stated in purchase order.

** Strain Relief tie-off option is not available in PowerSafe Compact.

SPECIFICATIONS

GENERAL

- UL and cUL Listed
- Meets/exceeds all applicable NEC standards
- Satisfies safety requirements for lockout/tagout
- Short Circuit Current Rating (SCCR): 65,000A RMS symmetrical

MECHANICAL

- Wall-mount unit with integral keyhole fixing points
- 16-gauge welded steel cabinet, rated NEMA 1
- Locking swing hinged door with clamp latch
- ETC Sensor styling with fine-textured, scratch-resistant epoxy paint
- Secondary door for access to bare-end tie-ins
- Conduit entry via top or side (see manual)
- Solid, top and side panel free of conduit knockouts to allow for greater flexibility in contractor conduit entry
- Integral breaker lockout bracket supports standard lockout/tagout procedures to prevent any persons from turning the breaker "on" while the lock is in place

ELECTRICAL

- Power input:120/208V – Three-phase, four-wire plus ground
- Wire capacity: copper and aluminum feeders are allowed
  - PowerSafe Compact: 8AWG-350kcmil
  - PowerSafe Pro: 3/0 - 500kcmil

Single lugs provided for all input connections except triple-neutral lugs in Pro model

- 65,000 AIC 100% rated 100A, 200A, or 400A breaker
- 65,000A SCCR symmetrical rated system
- Optional fault-current-limiting fuses reduce available let-thru current to connected portable equipment
- Reverse neutral and ground cam-style connector configuration
- Current transformers can optionally be installed in the field for connection to external third-party power meters
- Safety interlock disconnects output power when cabinet door is opened

PROTECTION FROM LIVE CONNECTIONS

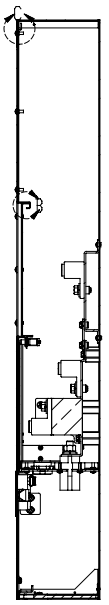
PowerSafe Pro

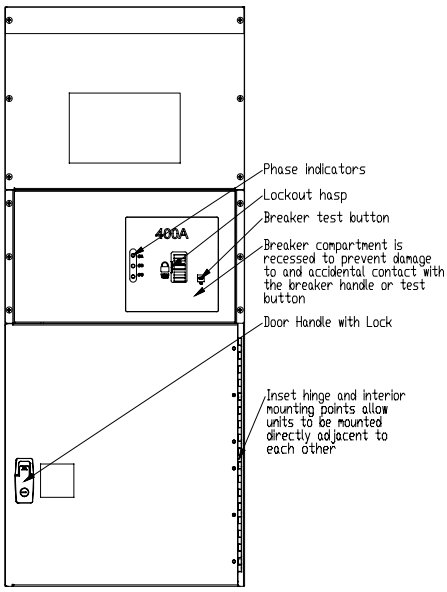
- Door-covered "Fingered" cable entry for safe access through the front of the panel
- "Fingered" cable entry made of foam rubber surface for prevention of wear and tear on cabling

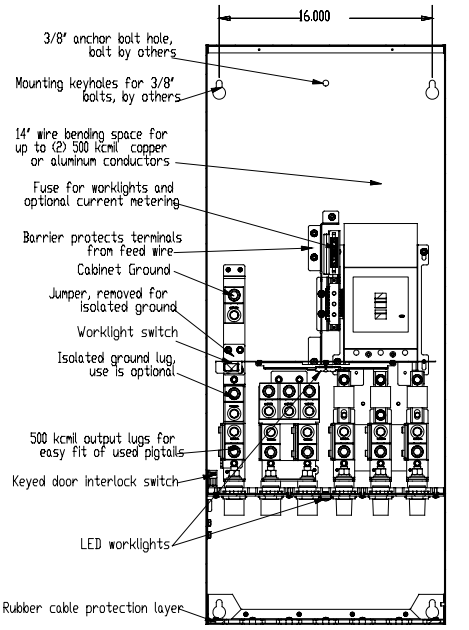
PowerSafe Compact

- Swing-hinged brackets lock covers in place until the front door is opened, preventing connector insertion under power

POWERSAFE PRO

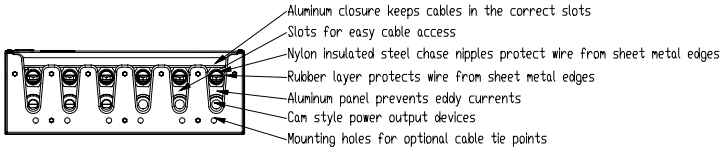




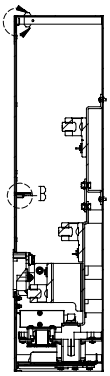


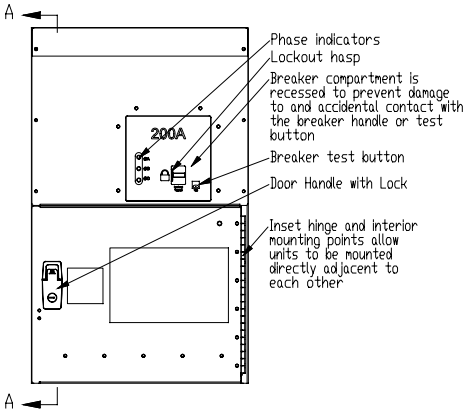
Some components hidden for clarity

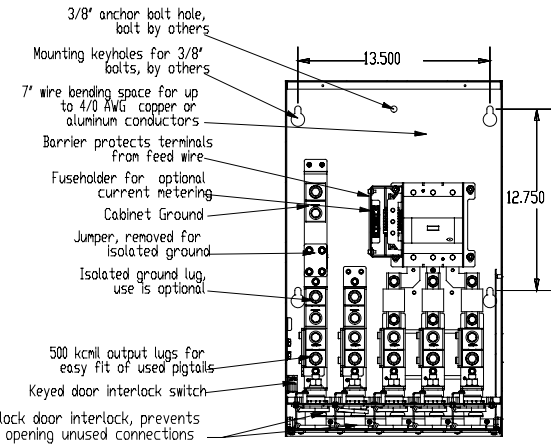
Front panels interlock to prevent unauthorized removal without the key



POWERSAFE COMPACT







Some components hidden for clarity

Front panels interlock to prevent unauthorized removal without the key

Stagecraft Industries, Inc.
TECHNICAL DATA SHEET

Series 600-100A

100A COMPANY SWITCH:
ENTERTAINMENT INDUSTRY POWER PANEL

SPECIFICATIONS

1. The Company Switch shall be a specialized power distribution panel for the connection of portable electrical equipment in theatres, auditoriums and other entertainment venues.

2. The Company Switch must satisfy the requirements of NFPA 70 (National Electric Code) Article 384 – Switchboards and Panelboards, and Article 520 – Theaters and Studios. Output panel connectors must specifically comply with Article 520-53(k) for Single-Pole Separable Connectors and Article 300-20(b), Induced Currents in Metal Enclosures. The entire assembly must be UL listed and labeled.

3. The Company Switch shall be a 24" W x 36" H x 8" D, NEMA 1, wall mounted enclosure constructed of 14 gauge steel finished with a black epoxy coating. NEMA 3R assemblies shall be available for exterior applications as an option.

4. The main breaker shall be a UL listed, 100% equipment rated, continuous-duty circuit breaker utilizing a microprocessor-based overcurrent protective trip system. It shall have a CSA/UL short-circuit interrupting rating of 65kA at 240VAC. Breakers with AIC ratings of up to 200kA shall be available as an option.

5. All connections from the main breaker and the input lugs to the outlet receptacles shall be made with copper buss bar. The grounding connection shall be made to the main cabinet frame with a provision for converting to an isolated ground at installation. Service input to the cabinet shall be 120/208 VAC, three phase, 4 wire + ground. Wiring size range for contractor connection shall be (1) 2AWG - 4/0, AL/CU for each line connection and (1) 6AWG - 500 kcmil, AL/CU for each neutral and ground.

6. Phase indicator lamps shall be mounted in a clearly visible location on the front panel of the enclosure. A safety interlock mechanism shall prevent the door to the enclosure from being opened if the breaker is on. An additional locking mechanism shall allow a padlock or lockout tag to secure the breaker in the OFF position. An optional keyed lock shall be available in place of the latch securing the enclosure door.

7. The NEC mandated warning advising the proper sequence for connecting and disconnecting single pole separable connectors shall be permanently printed on the front of the enclosure.

8. The Company Switch shall be Hi-Pot tested at 1250VAC for no less than 10 seconds.

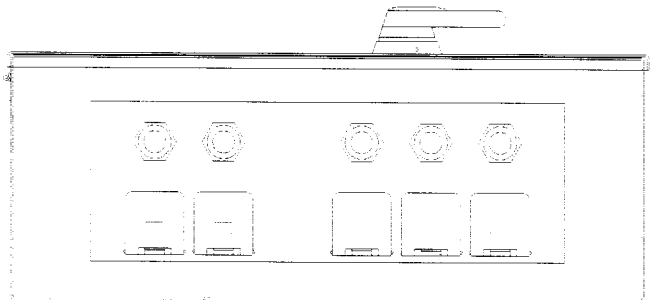
9. Provide non-ferrous output panel at the bottom of the enclosure with one of the following options:

- -C (5) Panel Mount Receptacles (Cam-lok® E1016 or equal) with snap-back metal covers.
- -C/BW (5) Panel Mount Receptacles (Cam-lok E1016 or equal) with snap-back metal covers and (5) internal lugs for bare-wire cable connections with individual strain relief fittings for each load cable.
- -P (1) Posi-lok Output Panel (Posi-lok E0400) sequential interlock receptacle panel with (5) color coded receptacles

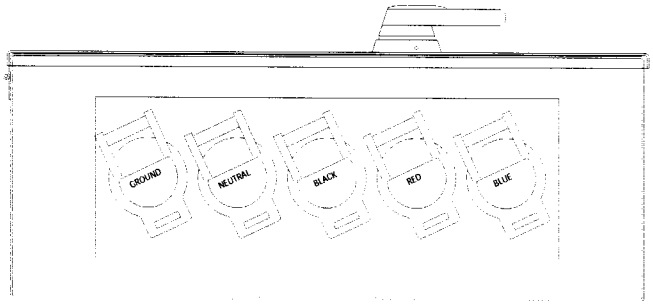
10. Provide a quantity of __ Model #600-100-x Company Switches as manufactured by Stagecraft Industries, Inc. or approved equal.

Posi-lok and Cam-lok are registered trademarks of Cooper Crouse-Hinds.

C (5) Panel Mount Receptacles (Cam-lok® E1016 or equal) with snap-back metal covers.



C/BW (5) Panel Mount Receptacles (Cam-lok® E1016 or equal) with snap-back metal covers and (5) internal lugs for bare-wire cable connections with individual strain relief fittings for each load cable.



P (1) Posi-lok Output Panel (Posi-lok E0400) sequential interlock receptacle panel with (5) color coded receptacles.

ENTERTAINMENT INDUSTRY POWER PANEL

SPECIFICATIONS

1. The Company Switch shall be a specialized power distribution panel for the connection of portable electrical equipment in theatres, auditoriums and other entertainment venues.

2. The Company Switch must satisfy the requirements of NFPA 70 (National Electric Code) Article 384 – Switchboards and Panelboards, and Article 520 – Theaters and Studios. Output panel connectors must specifically comply with Article 520-53(k) for Single-Pole Separable Connectors and Article 300-20(b), Induced Currents in Metal Enclosures. The entire assembly must be UL listed and labeled.

3. The Company Switch shall be a 24" W x 36" H x 8" D, NEMA 1, wall mounted enclosure constructed of 14 gauge steel finished with a black epoxy coating. NEMA 3R assemblies shall be available for exterior applications as an option.

4. The main breaker shall be a UL listed, 100% equipment rated, continuous-duty circuit breaker utilizing a microprocessor-based overcurrent protective trip system. It shall have a CSA/UL short-circuit interrupting rating of 65kA at 240VAC. Breakers with AIC ratings of up to 200kA shall be available as an option.

5. All connections from the main breaker and the input lugs to the outlet receptacles shall be made with copper buss bar. The grounding connection shall be made to the main cabinet frame with a provision for converting to an isolated ground at installation. Service input to the cabinet shall be 120/208 VAC, three phase, 4 wire + ground. Wiring size range for contractor connection shall be (2) 3/0 - 250 kcmil, AL/CU for each line connection and (2) 6AWG - 500 kcmil, AL/CU for each neutral and ground.

6. Phase indicator lamps shall be mounted in a clearly visible location on the front panel of the enclosure. A safety interlock mechanism shall prevent the door to the enclosure from being opened if the breaker is on. An additional locking mechanism shall allow a padlock or lockout tag to secure the breaker in the OFF position. An optional keyed lock shall be available in place of the latch securing the enclosure door.

7. The NEC mandated warning advising the proper sequence for connecting and disconnecting single pole separable connectors shall be permanently printed on the front of the enclosure.

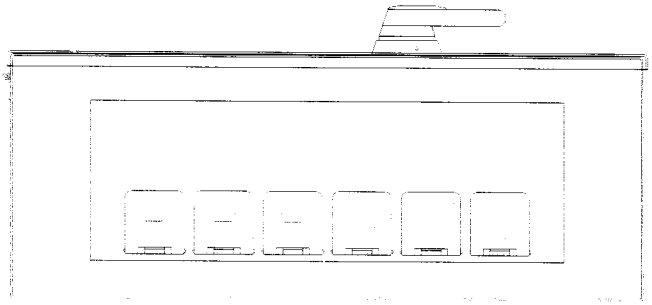
8. The Company Switch shall be Hi-Pot tested at 1250VAC for no less than 10 seconds.

9. Provide non-ferrous output panel at the bottom of the enclosure with one of the following options:

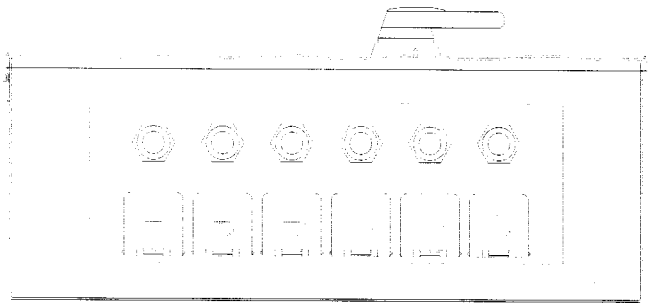
- -C (6) Panel Mount Receptacles (Cam-lok® E1016 or equal) with snap-back metal covers.
- -C/BW (6) Panel Mount Receptacles (Cam-lok E1016 or equal) with snap-back metal covers and (6) internal lugs for bare-wire cable connections with individual strain relief fittings for each load cable.
- -P (1) Posi-lok Output Panel (Posi-lok E0400) sequential interlock receptacle panel with (6) color coded receptacles

10. Provide a quantity of __ Model #600-400-x Company Switches as manufactured by Stagecraft Industries, Inc. or approved equal.

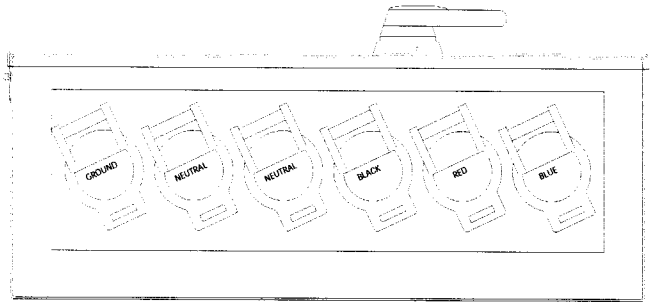
Posi-lok and Cam-lok are registered trademarks of Cooper Crouse-Hinds.



C (6) Panel Mount Receptacles (Cam-lok® E1016 or equal) with snap-back metal covers.



C/BW (6) Panel Mount Receptacles (Cam-lok E1016 or equal) with snap-back metal covers and (6) internal lugs for bare-wire cable connections with individual strain relief fittings for each load cable.



P (1) Posi-lok Output Panel (Posi-lok E0400) sequential interlock receptacle panel with (6) color coded receptacles.

Model Number	Description
600-400-C	400A, (6) Cam output receptacles
600-400-C/BW	400A, (6) Cam receptacles, (6) lugs for bare wire connection
600-400-P	400A, (1) Cooper Crouse-Hinds Posi-lok Panel with (6) receptacles

Outdoor Enclosures for Company Switches

Features

- UL Listed NEMA 3R outer enclosure
- Galvanized steel construction
- Company switch is completely enclosed inside the NEMA 3R enclosure
- Lockable trapdoor on bottom for cable access
- Protection from weather and vandalism
- Units available to accept ALL company switches manufactured by Union Connector
- Powder coated for long lasting finish
- Company Switch is factory installed inside NEMA 3R

Options

- NEMA 4X outer enclosure
- Stainless steel construction
- Dual doors
- Recessed mount design
- Floor / Pad mounting
- Special labeling
- Custom color / finish

NEMA 3R enclosure containing a 400A. Company Switch outside the Orange County Convention Center in Orlando, FL.
The 400A. Company Switch is completely enclosed and protected from weather and vandalism. The cable entry trapdoor on the bottom of the enclosure is closed and locked

Outdoor Enclosures for Company Switches

Specifications

1. Enclosure shall be a UL Listed NEMA 3R, fabricated of galvanized steel .
2. Finish shall be ASA 61 Gray powder coat.
3. The enclosure shall contain (4) mounting tabs for surface mounting.
4. Dimensions for standard units shall be sized to accept standard Union Connector company switches as indicated:

Company Switch Type	Ampacity	NEMA 3R Height	Width	Depth
CSC	60-100	36	24	10
CSC	200-400	42	24	10
CSC/SP	60-100	48	30	12
CSC/SP	200-400	54	30	14
CSC/SP	600	54	30	12
PBS/SP	60-200	48	30	12
PBS/SP	400	64	34	14

5. A drip shield shall be provided above the door opening.
6. The enclosure shall have a hinged front door and a handle able to accept a padlock.
7. The bottom of the enclosure shall contain a hinged trapdoor for entry of portable cable. The trapdoor shall be secured by a latch accessible only from inside the enclosure.
8. The Company Switch shall be factory installed inside the NEMA 3R enclosure.

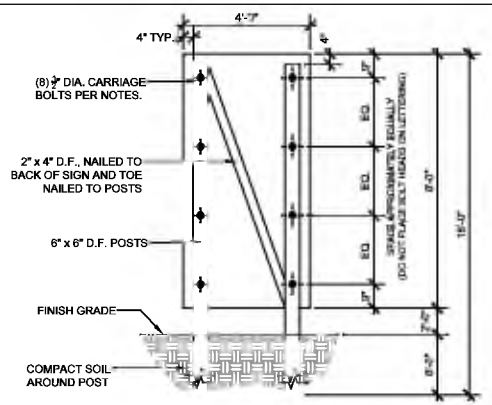
SIGN TEXT LAYOUT

SCALE: 3/4" = 1'-0"



SIGN CONSTRUCTION VIEWED FROM REAR

SCALE: 3/8" = 1'-0"

NOTES:

1. SIGN SHALL BE CONSTRUCTED OF 3/4" ACX PLYWOOD. LETTERING SHALL BE PLACED ON FRONT SIDE. PAINT ALL EXPOSED WOOD SURFACES WITH ONE COAT PRIMER AND TWO COATS ENAMEL, PER DUNN-EDWARDS PRINTED SPECIFICATIONS, OR APPROVED EQUAL. COLORS: SIGN, TRIM, POSTS, AND DIAGONAL BRACING-SNOWCAP (WHITE) Q9-36P; ALL LETTERING (EXCLUDING CITY SEAL) AND TREE SILHOUETTE DESIGN SHALL BE BLACK.
2. SECURE SIGN TO 6" X 6" POSTS WITH 1/2" DIAMETER CARRIAGE BOLTS OF SUFFICIENT LENGTH TO SECURE SIGN TO POSTS. FOUR BOLTS PER POST. PROVIDE GALVANIZED WASHERS UNDER NUTS. DO NOT PLACE BOLTS THROUGH LETTERING.
3. ALTERNATE SIGN MOUNTING: UPON APPROVAL FROM PROJECT MANAGER, CONTRACTOR MAY OPT TO MOUNT SIGN ON A MOVEABLE BASE TO ACCOMMODATE CONSTRUCTION ACTIVITIES.
4. ☐ IF BOX TO LEFT IS CHECKED, ENTIRE FACE OF SIGN SHALL BE COVERED WITH 4' X 8' X 3/16" SHEET OF CLEAR PLEXIGLAS TO PROTECT FROM GRAFFITI. SECURE TO FACE OF SIGN WITH 1" X 2" EDGE TRIM. SECURE EDGE TRIM WITH NUMBER 12 X 1-1/4" STAINLESS STEEL FLAT HEAD WOOD SCREWS. SPACE AT 18" ON CENTER. AROUND PERIMETER OF SIGN.
5. SEE SPECIFICATIONS FOR ADDITIONAL INFORMATION AND REQUIREMENTS. SIGN SHALL BE INSTALLED WITHIN TWO WEEKS OF THE START OF CONSTRUCTION.

SHEET 1 OF 2 SHEETS

NOTES FOR HOUSE CONNECTION SEWERS

1. EXCEPT AS OTHERWISE INDICATED ON THE PROJECT PLANS, ALL HOUSE CONNECTION SEWERS SHALL BE TYPE "A" AND SHALL BE CONSTRUCTED ON STRAIGHT LINES AND GRADES BETWEEN CONTROL POINTS AND ELEVATIONS.

2. SEE PROJECT PLANS FOR VALUES OF:

   A. LENGTHS: "A" AND "B"

   B. HEIGHT: "H"

   C. ELEVATIONS: "E" AND "F"

▽ 3. ALL HOUSE CONNECTION SEWER PIPE SHALL BE 6 INCH:

   A) VITRIFIED CLAY PIPE CONFORMING TO SECTION 207-8; OR

   B) ABS SOLID WALL PIPE CONFORMING TO SECTION 207-15; OR

   C) ABS COMPOSITE PIPE CONFORMING TO SECTION 207-16; OR

   D) PVC PLASTIC PIPE CONFORMING TO SECTION 207-17; OR

   E) CAST IRON OR DUCTILE IRON PIPE CONFORMING TO SECTION 207-9;

   OF THE STANDARD SPECIFICATIONS. CHANGES FROM ONE TYPE OF MATERIAL OR SIZE TO ANOTHER SHALL BE MADE ONLY BY MEANS OF SUITABLE ADAPTERS APPROVED BY THE ENGINEER.

4. THE UPPER END OF THE HOUSE CONNECTION SHALL BE SEALED BY INSTALLING A CAP AND SEALING THE CAP WITH 1/2 INCH THICK TYPE "F" MORTAR AROUND THE CIRCUMFERENCE OF THE CAP.

5. EXCEPT AS CONTROLLED BY ELEVATIONS INDICATED ON THE PROJECT PLANS, THE MINIMUM SLOPE FOR ALL PIPES SHALL BE 2 PERCENT (S = 0.02 MINIMUM).

6. THE FIGURE IN A CIRCLE ON THE PROJECT PLANS ADJACENT TO A HOUSE CONNECTION SEWER STATION INDICATES THE DEPTH IN FEET BELOW THE EXISTING TOP OF CURB TO WHICH THE INVERT OF THE UPPER END OF THE HOUSE CONNECTION SEWER SHALL BE CONSTRUCTED. IF NO DEPTH IS INDICATED, THE INVERT OF THE UPPER END SHALL BE THE ELEVATION SHOWN ON THE PROFILE. WHERE NEITHER DEPTH NOR ELEVATION IS INDICATED, THE INVERT SHALL BE FOUR FEET BELOW THE TOP OF THE EXISTING CURB.

7. BRANCHES SHALL BE EITHER TEES OR WYES AND SHALL BE ROTATED UPWARD FROM THE HORIZONTAL TO AN ANGLE OF 22 1/2 DEGREES TO 45 DEGREES. WHEN TEES ARE USED, BENDS ARE NOT REQUIRED BUT MAY BE USED AT THE OPTION OF THE CONTRACTOR. WHEN THE BRANCH ROTATION DOES NOT CONFORM TO THE SLOPE OF THE HOUSE CONNECTION SEWER, PULLED JOINTS MAY BE USED FOR ADJUSTMENT.

8. THE MAXIMUM DEFLECTION AT EACH JOINT FOR 6-INCH VITRIFIED CLAY PIPE HOUSE CONNECTION SEWERS SHALL BE 4 DEGREES, WHICH IS EQUAL TO A PULL OF 9/16 INCH. (PULL IS DEFINED AS THE SEPARATION OF THE ABUTTING PIPE ENDS ON THE CONVEX SIDE OF THE CURVE MEASURED AT THE OUTSIDE OF THE PIPE BARREL.)

9. CONNECTION OF A BUILDING SEWER SMALLER THAN 6 INCHES TO A 6 INCH HOUSE CONNECTION SEWER SHALL BE MADE USING AN APPROVED INCREASER-TEE OR A INCREASER FOLLOWED BY A TEE.

10. ALL HOUSE CONNECTION SEWERS OR PORTIONS THEREOF CONSTRUCTED ON A SLOPE EXCEEDING 45° SHALL BE ENCASED IN CONFORMITY TO CASE 4 BEDDING PER STANDARD PLAN S-251.

11. HOUSE CONNECTION SEWERS CONSTRUCTED PURSUANT TO A HOUSE CONNECTION PERMIT SHALL CONFORM TO SECTION 64.17 OF THE LOS ANGELES MUNICIPAL CODE

NOTES FOR ADJUSTING MAINTENANCE HOLE (MH) TO GRADE

1. GENERAL

   A. UNLESS OTHERWISE SHOWN, MH'S SHALL CONFORM TO STANDARD PLANS S-140, S-141, AND S-142.

   B. DIMENSION D SHALL BE THE SAME AS THE SIZE OF MH FRAME AND COVER TO BE USED.

   C. THE CONTRACTOR MAY REUSE THE EXISTING MH FRAME AND COVER, UNLESS IT IS DAMAGED BY THE CONTRACTOR DURING THE CONSTRUCTION OPERATIONS OR WHEN OTHERWISE INDICATED ON THE PROJECT PLANS. ITEMS DAMAGED BY THE CONTRACTOR SHALL BE REPLACED WITH IDENTICAL NEW ITEMS AT NO EXPENSE TO THE CITY.

   D. BRICK AND PLASTER SHALL CONFORM TO THE STANDARD SPECIFICATIONS, SECTION 202-1.

   E. EXISTING STEPS LOCATED WITHIN REMOVAL LIMITS SHALL NOT BE REPLACED. WHEN REMOVAL OF EXISTING STEPS BEYOND THE MH REMOVAL LIMITS IS INDICATED ON THE PROJECT PLANS, THE STEPS SHALL BE REMOVED TO A DEPTH OF 50 mm (2") BEYOND THE INSIDE FACE OF THE BRICK MH, AND THE HOLE SHALL BE FILLED WITH CLASS "C" MORTAR.

2. RAISING EXISTING BRICK MH'S

   A. BRICK MH'S TO BE RAISED LESS THAN 300 mm (12") MAY BE EXTENDED VERTICALLY, PROVIDED THAT AT A DEPTH OF 800 mm (30") BELOW THE TOP OF THE MH AT ITS NEW ELEVATION, THE INSIDE DIAMETER OF THE MH IS 762 mm (30") OR GREATER.

   B. BRICK MH'S TO BE RAISED LESS THAN 90 mm (3 1/2") MAY BE RAISED BY APPLYING CLASS "C" MORTAR TO THE TOP OF THE EXISTING BRICKWORK. IF THE BRICK MH IS TO BE RAISED 90 mm (3 1/2") OR MORE, A NEW COURSE OR COURSES OF BRICKWORK SHALL BE PLACED ON TOP OF THE EXISTING BRICK WORK.

3. LOWERING EXISTING BRICK MH'S

   A. WHERE A BRICK MH IS TO BE LOWERED LESS THAN 300 mm (12"), THE FRAME MAY BE RESET ON THE EXISTING BRICKWORK AND THE 250 mm (10") MINIMUM BRICKWORK RECONSTRUCTION BE OMITTED, PROVIDE THAT THE BASE OF THE FRAME DOES NOT OVERHANG THE BRICKWORK ON THE INSIDE SURFACE OF THE MH MORE THAN AVERAGE OF 40 mm (1 1/2") IN ANY QUADRANT NOR MORE THAN 50 mm (2") AT ANY POINT.

4. RAISING EXISTING PRECAST CONCRETE SEWER MH'S

   A. PRECAST CONCRETE MH'S TO BE RAISED LESS THAN 75 mm (3") MAY BE RAISED BY APPLYING CLASS "C" MORTAR TO THE TOP OF THE EXISTING MH PROVIDED THE TOTAL HEIGHT OF MORTAR, EXISTING AND NEWLY APPLIED, DOES NOT EXCEED 75 mm (3").

   B. WHERE THE PRECAST CONCRETE MH IS TO BE RAISED 75 mm (3") OR MORE, OR WHERE THE TOTAL HEIGHT OF MORTAR, EXISTING OR NEWLY APPLIED, WOULD EXCEED 75 mm (3"), GRADE RINGS SHALL BE UTILIZED. CLASS "C" MORTAR MAY BE USED FOR FINAL ADJUSTMENT, BUT NOT MORE THAN 75 mm (3") IN HEIGHT. WHERE RAISING THE MH WOULD RESULT IN THE UPPER SEGMENT OF THE SHAFT BEING MORE THAN 800 mm (30") IN HEIGHT, REMOVE THE REDUCER AND THE UPPER SEGMENT OF THE SHAFT, INSTALL ADDITIONAL RINGS OR PIPE TO THE LOWER SEGMENT OF THE SHAFT, AND REINSTALL THE REDUCER AND GRADE RINGS AS REQUIRED.

5. LOWERING EXISTING PRECAST CONCRETE SEWER MH'S

   A. REMOVE SUFFICIENT GRADE RINGS TO LOWER THE MH AS REQUIRED. APPLY CLASS "C" MORTAR TO A HEIGHT NOT EXCEEDING 75 mm (3") FOR ADJUSTMENT TO FINAL GRADE.

   B. WHERE REMOVAL OF GRADE RINGS WOULD RESULT IN THE UPPER SEGMENT OF THE SHAFT BEING LESS THAN 300 mm (12") IN HEIGHT, REMOVE THE REDUCER AND SUFFICIENT SECTIONS OF THE LOWER SEGMENT OF THE SHAFT AND REINSTALL ANY NECESSARY SEGMENT OF THE LOWER SHAFT, THE REDUCER, AND THE GRADE RINGS TO CONFORM TO ANY REQUIREMENTS OF THIS PLAN.

   C. EXISTING GRADE RINGS NEED NOT BE REMOVED IF EXISTING MORTAR MAY BE REMOVED, AND AT LEAST 13 mm (1/2") OF MORTAR MAY BE PLACED ON TOP OF THE EXISTING GRADE RINGS TO RESEAT THE FRAME.

6. REPLACEMENT OF BRICK REDUCER WITH PRECAST CONCRETE REDUCER AND SHAFT

   UNLESS OTHERWISE INDICATED ON THE PLANS, THE CONTRACTOR MAY INSTALL A PRECAST CONCENTRIC CONCRETE REDUCER, CONCRETE GRADE RINGS, AND CONCRETE PIPE IN LIEU OF RECONSTRUCTING A BRICK REDUCER, PROVIDED:

   A. THE MAXIMUM I. D. OF SEWER PIPE CONNECTED TO THE MH DOES NOT EXCEED 200 mm (8").

   B. THE CONTRACTOR SECURES PRIOR APPROVAL FROM THE ENGINEER TO INSTALL THE CONCENTRIC REDUCER ONTO THE MH SHAFT. THE ENGINEER MAY, AS PART OF THE INSTALLATION REQUIREMENTS, REQUIRE THE CONTRACTOR TO COAT THE INSIDE OF THE REDUCER, RINGS, AND PIPE WITH AN APPROVED COATING.

   C. THE CONCRETE GRADE RINGS, THE CONCRETE REDUCER AND ANY CONCRETE PIPE SHALL BE JOINED TOGETHER AND BEDDED ONTO THE EXISTING BRICK MH WITH CLASS "C" MORTAR. THE DEPTH, WIDTH, AND THICKNESS OF THE MORTAR SHALL BE OF SUFFICIENT DIMENSIONS TO PROPERLY AND ADEQUATELY JOIN AND BED THE COMPONENT PARTS.

7. UNLESS OTHERWISE NOTED, EXCESS PRECAST GRADE RINGS, REDUCERS AND CONES FROM A PARTICULAR MH MAY BE REUSED ON OTHER MH'S ON THE PROJECT. EXCESS PRECAST GRADE RINGS, CONES AND REDUCERS SHALL BE SALVAGED AND DELIVERED TO THE NEAREST CITY SANITATION YARD.

8. LINED MH SHAFTS SHALL HAVE EXISTING LINING EDGES REPAIRED OR LINING APPLIED TO THE INTERIORS OF UNLINED GRADE RINGS, BRICKS, CONES, REDUCERS, TRANSITIONS PER BROWN BOOK AND STANDARD PLAN S-121.

NOTES FOR TERMINAL CLEANOUT STRUCTURE "Y"

1. SEE PROJECT PLANS FOR VALUES OF DIMENSION "D" AND ELEVATION "E".

2. PIPE AND FITTINGS EXCEPT AS OTHERWISE SHOWN HEREON SHALL BE OF THE SAME MATERIAL AS THE SEWER, AND MAY BE ANY OF THE FOLLOWING:

   A. VITRIFIED CLAY PIPE CONFORMING TO SECTION 207-8 OF THE STANDARD SPECIFICATIONS;

   B. ABS SOLID WALL PIPE CONFORMING TO SECTION 207-14 OF THE STANDARD SPECIFICATIONS;

   C. ABS COMPOSITE PIPE CONFORMING TO SECTION 207-15 OF THE STANDARD SPECIFICATIONS;

   D. PVC PIPE CONFORMING TO SECTION 207-16 OF THE STANDARD SPECIFICATIONS.

3. PIPES AND FITTINGS SHALL BE PROPERLY ALIGNED AND MAINTAINED WHILE CONCRETE IS BEING PLACED AND ALLOWED TO HARDEN. JOINTS FOR PIPES AND FITTINGS SHALL BE MADE PRIOR TO PLACING CONCRETE. CONCRETE FOR BEDDING, ENCASEMENT, AND WALL SUPPORT FOR PIPES AND FITTINGS SHALL BE PLACED UNIFORMLY AROUND THE PIPE AND FITTINGS AS SHOWN HEREON TO MAINTAIN PROPER ALIGNMENT, AND SHALL BE CLASS 420-C-2000.

4. THE ACCESS FRAME, COVER, AND CAP SHALL BE CAST IRON CONFORMING TO SECTION 206-3 OF THE STANDARD SPECIFICATIONS. THE FINGER HOLES MAY BE DRILLED OUT OR MAY BE BLOCKED OUT PRIOR TO CASTING; THEY SHALL NOT BE PUNCHED OUT.

5. THE CONTRACTOR, AT HIS OPTION, MAY PLACE EITHER CIRCULAR OR SQUARE CONCRETE PIPE WALL SUPPORTS AS SHOWN HEREON.

VAULT INDEX NUMBER B-4111

SHEET 1 OF 2 SHEETS

NOTES

1. EXCEPT AS MODIFIED HEREIN, ALL REINFORCED CONCRETE PIPE (RCP) NOT LARGER THAN 108 INCHES INTERNAL DIAMETER SHALL CONFORM TO SUBSECTION 207-2 OF THE STANDARD SPECIFICATIONS. FOR RCP LARGER THAN 108 INCHES, SEE PLANS OR SPECIAL PROVISIONS.

2. WHEN HIGH CHLORIDE, HIGH SULFATE, OR MARINE (WITHIN 1,000 FEET OF OCEAN OR TIDAL WATER) ENVIRONMENTS ARE INDICATED ON THE PLANS OR SPECIAL PROVISIONS, CONCRETE SHALL CONTAIN A MINIMUM OF 7 SACKS OF TYPE II CEMENT PER CUBIC YARD. FOR VERY HIGH SULFATE PRESENCE (OVER 15,000 PPM), 7 SACKS OF TYPE V CEMENT OR A 25% CLASS F FLY ASH MAXIMUM SUBSTITUTION BY WEIGHT WITH TYPE II CEMENT SHALL BE USED, PROVIDED THE TOTAL WEIGHT OF TYPE II CEMENT AND FLY ASH IS AT LEAST 564 POUNDS PER CUBIC YARD.

3. CONCRETE COVER FOR REINFORCING STEEL IN CONCRETE PIPE SHALL CONFORM TO SUBSECTION 207-2.4.2. WHEN "SPECIAL COVER RCP, TYPE_____" IS SPECIFIED ON THE PLANS OR SPECIAL PROVISIONS, THE MINIMUM CLEARANCE (d_1 OR d_2) FOR TRANSVERSE REINFORCEMENT SHALL BE:

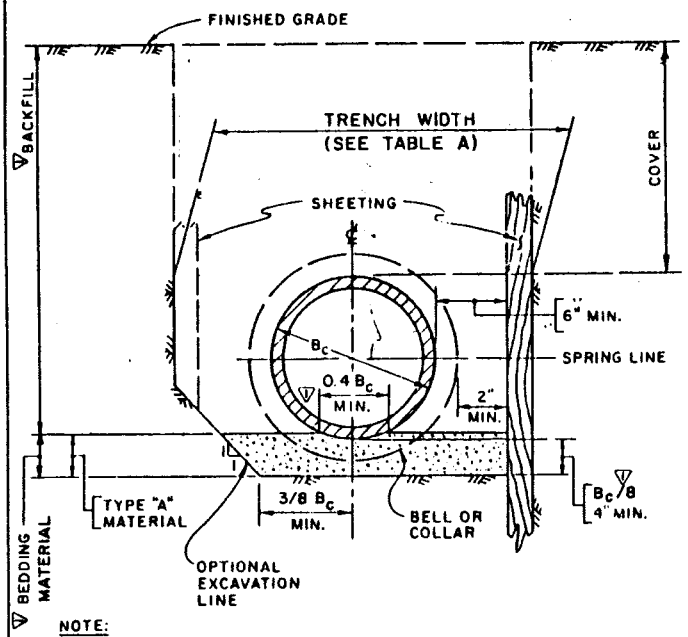
TYPE	COVER	USE
I - A	d_1 = 1-1/2" -0" + 1/2"	16 < V ≤ 24
I - B	d_1 = 2" -0" + 1/2"	
II - A	d_1 = 2" -0" + 1/2"	24 < V ≤ 32
II - B	d_1 = 2-1/2" -0" + 1/2"	
III - A	d_1 = 2-1/2" -0" + 1/2"	32 < V ≤ 40
III - B	d_1 = 3" -0" + 1/2"	
IV	SPECIAL DESIGN--SEE PLANS OR SPECIAL PROVISIONS	V > 40
V	d_1, d_2 = 1/2 INCH MINIMUM ADDED TO THAT SPECIFIED IN 207-2.4.2	HIGH CHLORIDE, HIGH GROUNDWATER, OR MARINE ENVIRONMENT

NOTES TO DESIGNERS:

(A) "V" IS AVERAGE VELOCITY, FEET PER SECOND (FPS).
(B) "A" IS USED WHERE DEBRIS IN FLOW DOES NOT OCCUR.
(C) "B" IS USED WHERE DEBRIS IN FLOW OCCURS.
(D) INCREASED CONCRETE COVER IS NOT CUMULATIVE WITH THAT REQUIRED FOR MARINE, HIGH VELOCITY, GROUNDWATER, OR CHLORIDE ENVIRONMENTS, BUT SHOULD BE AT LEAST THE GREATEST OF ANY OF THE REQUIREMENTS.
(E) "d_2" IS APPLICABLE ONLY FOR TYPE V USAGE.
(F) FOR VELOCITIES LESS THAN OR EQUAL TO 16 FPS AND FOR NORMAL ENVIRONMENTS, CONCRETE COVER SHALL CONFORM TO SUBSECTION 207-2.4.2.

CASE 1 BEDDING INSTALLATION

LOAD FACTOR = 1.4

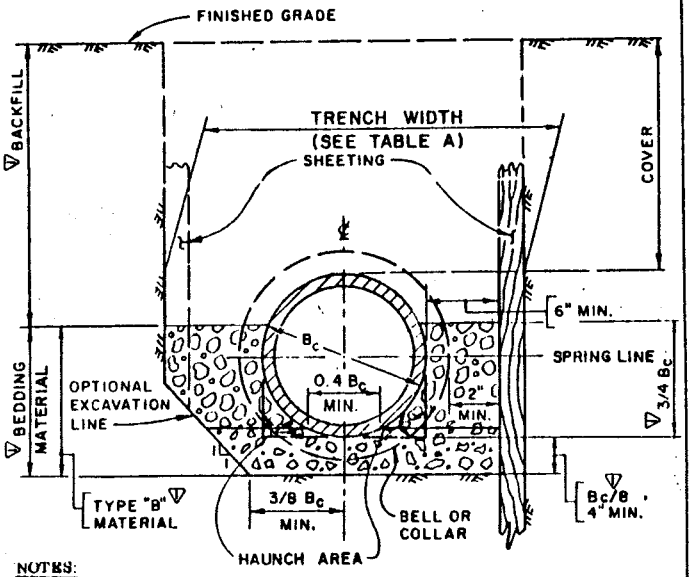


NOTE:

INDICATES UNDISTURBED EARTH

CASE 2 BEDDING INSTALLATION

LOAD FACTOR = 1.8



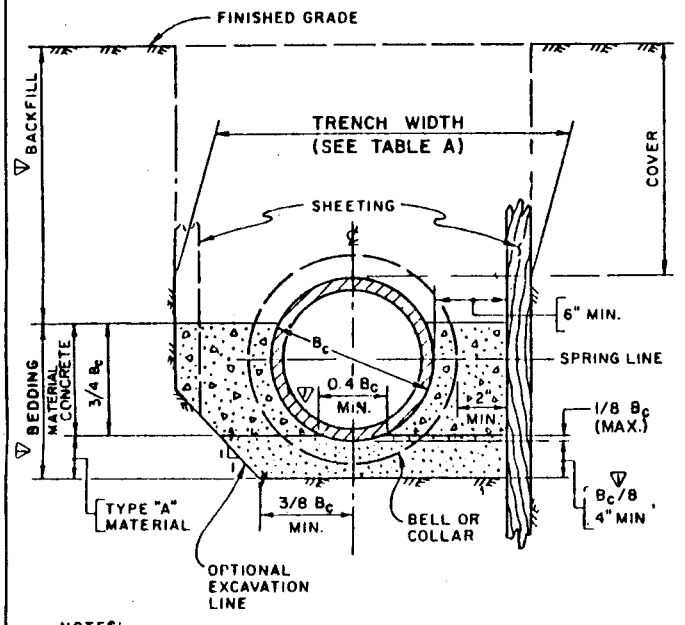
NOTES:

A. INDICATES UNDISTURBED EARTH.

B. TYPE "B" MATERIAL SHALL BE PLACED IN A MANNER SUCH AS SLICING, SHOVEL-SPADING, OR SHOVEL RODDING TO INSURE COMPLETE FILLING OF THE "HAUNCH AREAS" BELOW THE PIPE. (JETTING OF TYPE "B" MATERIAL IS NOT REQUIRED).

CASE 3 BEDDING INSTALLATION

LOAD FACTOR = 2.7



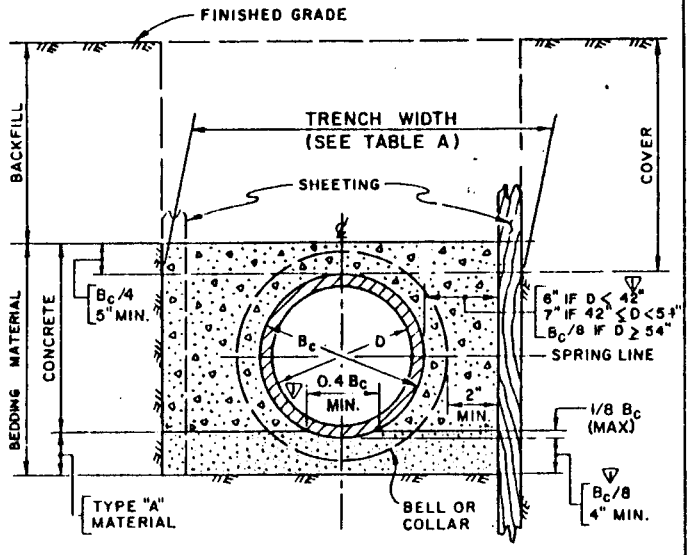
NOTES:

A. INDICATES UNDISTURBED EARTH

B. SEE NOTE 5.

CASE 4 BEDDING INSTALLATION

LOAD FACTOR = 3.2



NOTES:

A. INDICATES UNDISTURBED EARTH.

B. < INDICATES "LESS THAN"; ≤ INDICATES "LESS THAN OR EQUAL TO"; ≥ INDICATES "GREATER THAN OR EQUAL TO".

D. SPECIAL - CONTRACTOR SHALL CONSTRUCT SPECIAL AS ORDERED BY THE ENGINEER.

GENERAL NOTES

1. CASE 1 BEDDING INSTALLATION SHALL BE USED FOR ALL PIPE LAYING UNLESS OTHERWISE SPECIFIED ON THE PLANS OR NOTED HEREON.

▽ 2. IF THE ACTUAL TRENCH WIDTH EXCEEDS THE MAXIMUM INDICATED IN TABLE A, THE CONTRACTOR IS REQUIRED TO PROVIDE A SUBSTITUTE INSTALLATION PER TABLE B. HOWEVER, IF RUNNING, CAVING OR SQUEEZING SOILS ARE PRESENT, CASE 2 OR 3 SHALL NOT BE USED AS A SUBSTITUTE. CASE 4 SHALL BE THE MINIMUM SUBSTITUTE.

3. IF THE COVER ON CLAY PIPE IS LESS THAN 42 INCHES MEASURED FROM THE FINISHED GRADE OR INTERIM CONSTRUCTION GRADE, CASE 5 BEDDING INSTALLATION SHALL BE USED.

▽ 4. UNLESS OTHERWISE SPECIFIED ON THE PLANS, THE BEDDING INSTALLATION CASE FOR SEWER HOUSE CONNECTIONS SHALL BE THE SAME AS THAT USED FOR THE MAIN LINE.

5. LOAD FACTORS INDICATED FOR EACH BEDDING INSTALLATION CASE ARE BASED ON THE 3-EDGE BEARING TEST WITH A 1.0 LOAD FACTOR. LOAD FACTORS APPLY IN THE DESIGN OF RCP, VCP AND ACP.

▽ 6. IF RUNNING, CAVING OR SQUEEZING SOILS ARE ENCOUNTERED WHEN CASE 2 OR 3 BEDDING INSTALLATION IS SPECIFIED ON THE PLANS, THE ENGINEER SHALL BE IMMEDIATELY NOTIFIED IN ORDER THAT HE CAN DETERMINE WHAT CORRECTIVE MEASURES SHALL BE TAKEN.

7. ALL COSTS ARISING FROM THE CONTRACTOR'S CHOICE OF OPTIONAL CONSTRUCTION DETAILS, INCLUDING SUBSTITUTE BEDDING INSTALLATIONS WHEN THE MAXIMUM TRENCH WIDTH IS EXCEEDED, SHALL BE CONSIDERED INCLUDED IN THE BID PRICE FOR PIPE IN PLACE.

8. PIPE BELLS AND COUPLINGS OUTSIDE OF THE PIPE BARREL SHALL BE PREVENTED FROM BEARING UPON BEDDING MATERIAL BY SUITABLE EXCAVATION DURING THE PIPE LAYING OPERATIONS.

9. IF A CHANGE IN BEDDING INSTALLATION CASE OCCURS BETWEEN THE JOINTS OF A LENGTH OF PIPE, THE CONTRACTOR SHALL CONSTRUCT THE HIGHER CASE BEDDING INSTALLATION FOR THE ENTIRE LENGTH OF THAT PIPE.

▽ 10. THE HEIGHT OF BEDDING MATERIALS AS DESCRIBED IN SUBSECTION 306-1.2.1 OF THE STANDARD SPECIFICATIONS IS MODIFIED AS ILLUSTRATED IN BEDDING CASES 1 THROUGH 5.

11. BEDDING

A. TYPE "A" MATERIAL:

(1) TYPE "A" MATERIAL SHALL BE ONE OF THE FOLLOWING:

a. SAND
b. NO. 3 OR NO. 4 AGGREGATE OR 1/2" OR 3/4" CRUSHED ROCK FOR PIPES LARGER THAN 24 INCHES IN DIAMETER.
c. NO. 4 AGGREGATE OR 1/2" CRUSHED ROCK FOR PIPES 24 INCHES OR SMALLER IN DIAMETER.
▽ d. UNDISTURBED NATIVE FREE DRAINING MATERIAL HAVING A MINIMUM SAND EQUIVALENT OF 30 AND SHAPED TO FULLY SUPPORT THE PIPE.

▽ (2) IF ANY TYPE "A" MATERIAL DIRECTLY SUPPORTING THE PIPE IS REMOVED OR DISLOCATED IN THE PROCESS OF REMOVING A PIPELAYING SLING, THAT MATERIAL SHALL BE CAREFULLY REPLACED BY HAND-SHOVELING.

▽ B. TYPE "B" MATERIAL SHALL BE NO. 4 AGGREGATE OR 1/2" CRUSHED ROCK.

C. CONCRETE BEDDINGS:

▽ (1) AT LEAST 50% OF CONCRETE BEDDING WITHIN ANY 5-FOOT LENGTH SHALL BE PLACED AGAINST UNDISTURBED EARTH OR AGAINST TIMBER SHEETING WHICH IS PLACED AGAINST UNDISTURBED EARTH AND LEFT IN PLACE. ALL SHEETING ABOVE THE TOP OF BEDDING SHALL BE REMOVED. THE CONTRACTOR MAY REMOVE ALL STEEL SHEETING HAVING WEB THICKNESS OF 1/2" OR LESS. (MODIFIES STANDARD SPECIFICATIONS SUBSECTION 306-1.1.6).

(2) IF BACKFILL IS PLACED IMMEDIATELY AFTER PLACING CONCRETE BEDDING, SEE NOTE 12D.

▽ (3) TRANSVERSE CONSTRUCTION JOINTS SHALL BE PROVIDED AS FOLLOWS:

a. MAXIMUM SPACING SHALL BE 30 FEET FOR CLAY PIPE AND 40 FEET FOR CAST IRON, REINFORCED CONCRETE AND ASBESTOS CEMENT PIPES.
b. JOINTS SHALL BE LOCATED AT THE ENDS OF PIPE BELLS.
c. JOINTS SHALL BE PLACED AT ALL CHANGES BETWEEN ANY TWO BEDDING INSTALLATION CASES.

▽ (4) NO CONSTRUCTION JOINTS OTHER THAN THOSE REQUIRED BY NOTE 11.C.(3) SHALL BE LOCATED ABOVE THE SPRING LINE OF THE PIPE UNLESS AUTHORIZED BY THE ENGINEER OR SPECIFIED ON THE PLANS.

▽ 12. BACKFILLING: (MODIFIES STANDARD SPECIFICATIONS SUBSECTION 306-1.3)

A. BACKFILL MAY CONSIST OF THE EXCAVATED SOIL EXCEPT THAT BACKFILL SHALL NOT CONTAIN ROCKS GREATER THAN 2 INCHES TO A DISTANCE OF 1 FOOT OVER THE TOP OF THE PIPE. THERE WILL BE NO SAND EQUIVALENT REQUIREMENT. IMPORTED COHESIONLESS SAND SHALL NOT BE USED AS A BACKFILL EXCEPT AS PROVIDED FOR IN NOTE 12C.

B. EXCEPT WHERE MECHANICAL COMPACTION IS REQUIRED BY THE PLANS OR SPECIAL PROVISIONS, TRENCH BACKFILL SHALL BE JETTED. FLOODING OR PONDING IS PROHIBITED. THE UPPER 3 FEET OF BACKFILL IN STREETS SHALL EITHER BE JETTED AND ALLOWED TO DRAIN TO PROVIDE A FIRM AND UNYIELDING SUBGRADE OR SHALL BE MECHANICALLY COMPACTED.

C. WHERE MECHANICAL COMPACTION IS SPECIFIED, DAMPENED SAND SHALL BE USED AS BACKFILL TO ONE FOOT OVER THE TOP OF THE PIPE. AFTER DENSIFYING THE SAND BY JETTING, THE REMAINDER OF THE BACKFILL SHALL BE MECHANICALLY COMPACTED. ALL MECHANICALLY COMPACTED BACKFILL SHALL BE COMPACTED TO 90% RELATIVE COMPACTION.

SUBSECTION 306-1.3.2 OF THE STANDARD SPECIFICATIONS IS MODIFIED AS FOLLOWS:

WHERE OTHER TYPES OF IMPACT EQUIPMENT APPROVED BY THE ENGINEER ARE USED OVER SUCH PIPE, THE COMPACTIVE EFFORT PER BLOW SHALL NOT EXCEED THE FOLLOWING LIMITS UNLESS CASE 5 BEDDING IS USED, IN WHICH CASE THE PERMITTED EFFORT MAY BE TWICE THE TABULATED VALUES:

MAXIMUM COMPACTIVE EFFORT (FT-LB PER BLOW)	MINIMUM THICKNESS COMPACTED MATERIAL ABOVE BELLS OR CONCRETE ENCASEMENT (FT)	MINIMUM AREA OF COMPACTING FOOT (SQ IN)
200	1.5	16
400	2	25
625	2.5	36
900	3	36
1,225	3.5	49
1,600	4	64
2,025	4.5	64
2,500	5	64
3,600	6	81
4,900	7	81
6,400	8	100
8,100	9	100
10,000	10	144
12,100	11	144
14,400	12	144
16,900	13	144
19,600	14	144
22,500	15	144
100 x (FT COVER)^2	OVER 15	196

D. BACKFILLING OVER CONCRETE BEDDING (MODIFIES STANDARD SPECIFICATIONS SUBSECTION 306-1.3.1):

BACKFILL MAY BE PLACED IMMEDIATELY AFTER PLACEMENT OF CONCRETE BEDDING, SUBJECT TO THE FOLLOWING CONDITIONS AND RESTRAINTS:

(1) BACKFILL SHALL BE PLACED WITHIN 1 HOUR OF PLACING THE CONCRETE BEDDING AND IS LIMITED TO 10 FEET ABOVE THE TOP OF THE PIPE. WATER DENSIFICATION OF THE INITIAL 10 FEET OF BACKFILL SHALL NOT BE PERMITTED SOONER THAN 12 HOURS FOLLOWING CONCRETE PLACEMENT. ADDITIONAL BACKFILL SHALL NOT BE PLACED UNTIL THE MINIMUM ELAPSED TIME INDICATED IN THE "CONCRETE CLASS USE TABLE", STANDARD SPECIFICATIONS SUBSECTION 201-1.1.2.

(2) EXCEPT FOR THE AREA BELOW THE PIPE INDICATED ON CASE 5 BEDDING INSTALLATION, THE CONCRETE SHALL NOT CONTAIN ACCELERATING ADMIXTURE.

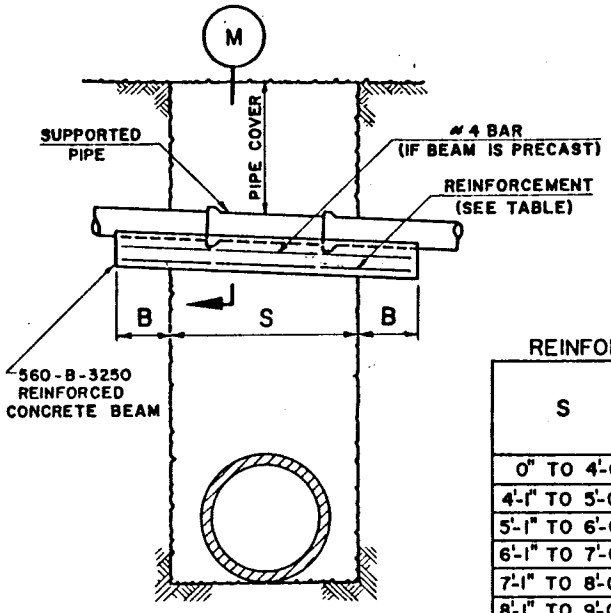
(3) THE CONCRETE BEDDING SHALL BE COVERED WITH A MINIMUM 6 MIL PLASTIC MEMBRANE TO PREVENT CONTAMINATION BY THE BACKFILL.

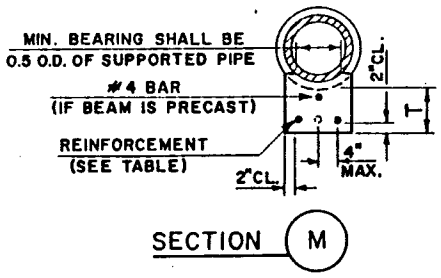
(4) THE CONCRETE BEDDING SHALL BE INCREASED AT LEAST AN ADDITIONAL 2 INCHES IN DEPTH.

(5) BACKFILL SHALL BE PLACED IN A MANNER WHICH WILL NOT DISTURB OR DISPLACE THE CONCRETE (SUCH AS "TUMBLING" IT DOWN THE SLOPE OF THE MATERIAL ALREADY IN PLACE IN THE TRENCH).

CASE 1

REINFORCED CONCRETE BEAM
FOR 4" TO 24" I.D. PIPE





SECTION M

NOTES

1. WIDTH OF BEAM SHALL EQUAL O.D. OF SUPPORTED PIPE. MINIMUM WIDTH SHALL BE 6".
2. IF SUPPORTED PIPE IS BEDDED IN CONCRETE, BEAM WIDTH SHALL EQUAL BEDDING WIDTH.
3. IF BEAM IS PRECAST, ENDS OF BEAM SHALL BE FULLY BEDDED IN -480-B-2000 CONCRETE FOR LENGTH "B". THE BEDDING SHALL HAVE A MINIMUM THICKNESS OF 4". CLASS "C" MORTAR SHALL BE PLACED BETWEEN TOP OF BEAM AND SUPPORTED PIPE TO PROVIDE MINIMUM BEARING SHOWN.
4. THIS CASE IS PERMITTED ONLY IF THE TRENCH WALLS ARE FIRM AND UNYIELDING.
5. MAXIMUM SPACING OF BARS SHALL BE 4" O.C.

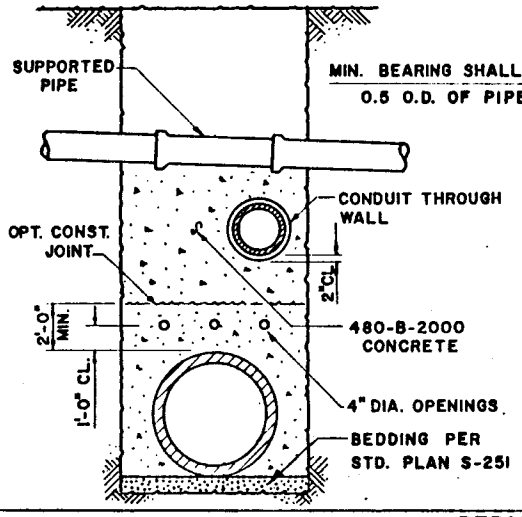
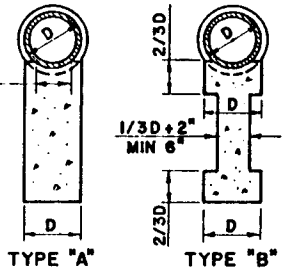
CASE 2

CONCRETE WALL





WALL SECTION

NOTES

1. THE SUPPORTING WALL SHALL HAVE A FIRM BEARING ON THE SUBGRADE AND AGAINST THE SIDES OF THE EXCAVATION.
2. ANY CONDUIT PASSING THROUGH THE WALL SHALL HAVE 2-INCH CLEARANCE FROM THE WALL.
3. 4-INCH DIA. OPENINGS THROUGH THE WALL AT 2 FT. O.C. HORIZONTALLY AND AT 5 FT. O.C. VERTICALLY SHALL BE PROVIDED TO PREVENT UNEQUAL PRESSURE RESULTING FROM JETTED BACKFILL.
4. IF SUPPORTED PIPE IS BEDDED IN CONCRETE, MINIMUM THICKNESS OF WALL SHALL EQUAL BEDDING WIDTH.
5. BRICK WITH MORTAR JOINTS MAY BE USED IN LIEU OF CONCRETE FOR WALLS UP TO 5 FT. IN HEIGHT OR LENGTH.

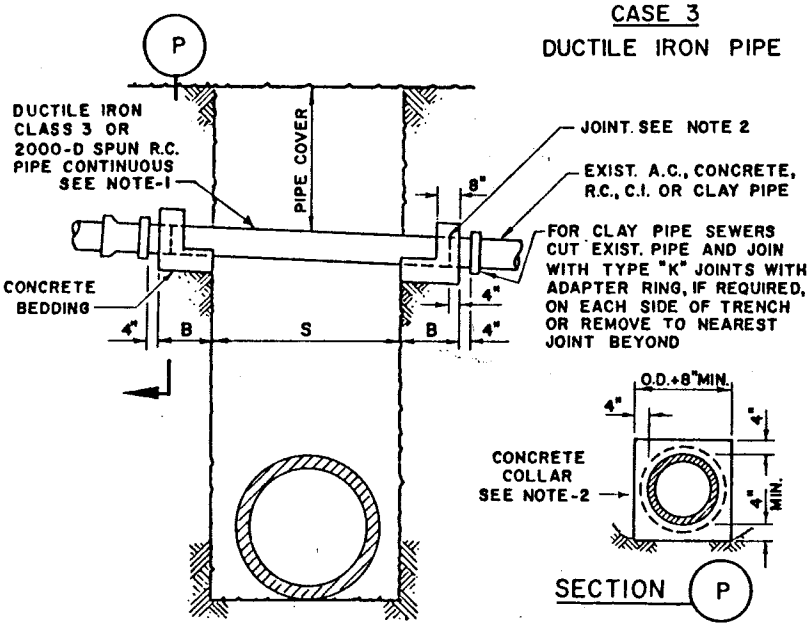
CASE 3

DUCTILE IRON PIPE



ALLOWABLE SPANS AND MIN. REQUIRED BEARING FOR DUCTILE IRON PIPE

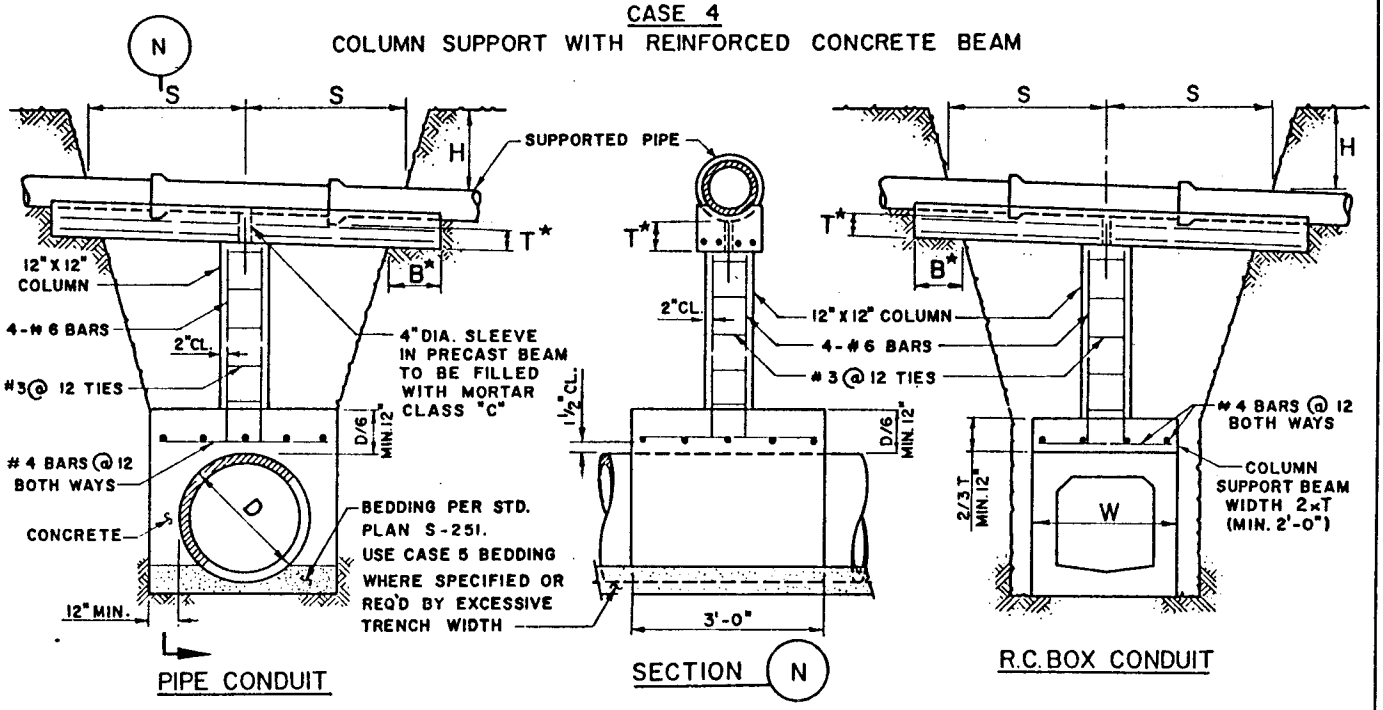
DEPTH OF COVER	6" PIPE		8" PIPE		10" PIPE	
	S(max)	B(min)	S(max)	B(min)	S(max)	B(min)
0" TO 8'-0"	11'-0"	1'-6"	13'-6"	1'-6"	16'-6"	2'-0"
8'-1" TO 16'-0"	8'-0"	1'-6"	10'-0"	2'-0"	12'-0"	2'-6"
16'-1" TO 25'-0"	7'-0"	1'-6"	9'-0"	2'-0"	10'-6"	2'-6"

NOTES

1. 2000-D SPUN R.C. PIPE OF SAME DIAMETER AS THE EXISTING PIPE MAY BE USED ONLY WHEN THE EXISTING PIPE IS A.C., CONCRETE OR R.C. PIPE AND THE TRENCH WIDTH IS 5'-0" OR LESS.
2. THE CONCRETE COLLAR JOINT SHALL BE USED FOR JOINTS IN STORM DRAIN PIPE.
3. ADAPTER RING, WHEN REQUIRED, SHALL BE SYNTHETIC RUBBER CONFORMING TO THE SPECIFICATIONS FOR SEALING COMPONENTS IN STANDARD PLAN B-3766.

CASE 4

COLUMN SUPPORT WITH REINFORCED CONCRETE BEAM



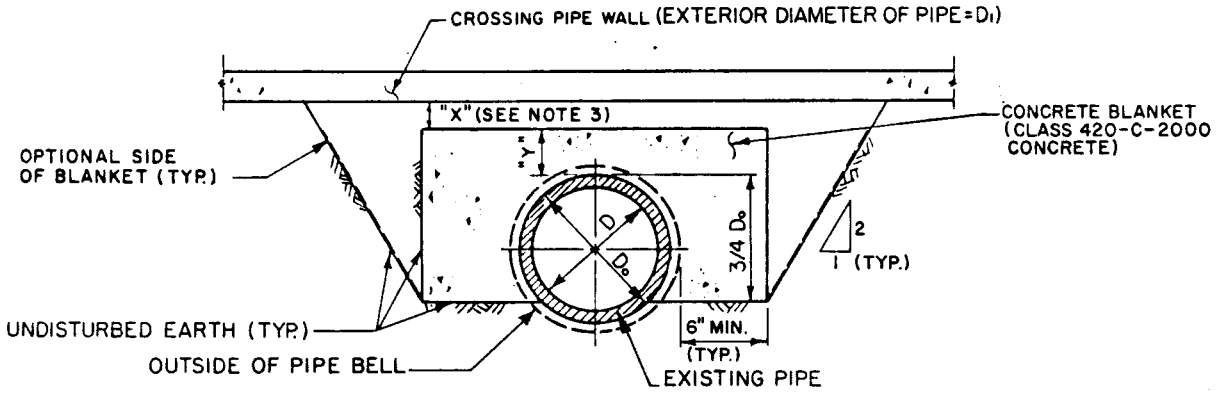
NOTES

1. SPAN "S" SHALL BE MAXIMUM 18 FT FOR EARTH COVER 8 FT OR LESS, 12 FT FOR EARTH COVER 16 FT OR LESS, AND 10 FT FOR OVER 16 FT EARTH COVER.
2. ALL CONCRETE SHALL BE 560-B-3250.
3. WHEN THE PIPE TO BE SUPPORTED CROSSES THE TRENCH ON A SKEW ANGLE, THE WALL OR BEAM WHICH SUPPORTS THE COLUMN SHALL BE CONSTRUCTED AT RIGHT ANGLE TO THE TRENCH.
4. SUPPORT SYSTEM MAY BE USED OVER CAST-IN-PLACE STRUCTURES.
5. BACKFILL ABOVE THE SUPPORT BEAM SHALL NOT BE PLACED UNTIL 72 HOURS AFTER THE SUPPORT IS POURED.
6. ★ REINFORCED CONCRETE BEAM DIMENSIONED AND REINFORCED PER TABLE UNDER CASE 1.

GENERAL NOTES

1. "S" IS THE SPAN OF THE PIPE SUPPORT MEASURED ALONG ITS CENTERLINE.
2. "B" IS THE LENGTH OF BEARING OF THE SUPPORT AGAINST UNDISTURBED EARTH MEASURED ALONG THE PIPE CENTERLINE.
3. CASE 2 SHALL BE USED FOR PARTIAL CROSSINGS, EXCEPT THAT WHERE THE DISTANCE FROM A SEWER CHIMNEY TO UNDISTURBED EARTH IS 18 INCHES OR LESS, THE TRENCH BACKFILL MAY BE DENSIFIED TO 18 INCHES ABOVE A HOUSE CONNECTION SEWER AND THEN RE-EXCAVATED FOR THE PIPE INSTALLATION.
4. ANY SEWER OR STORM DRAIN EXPOSED OR PARTIALLY EXPOSED IN A TUNNEL EXCAVATION SHALL BE SUPPORTED WITH A WALL, CASE 2.
5. IF BEDDING IS REMOVED FROM THE EXISTING PIPE THAT WILL REMAIN IN PLACE, THE PIPE SHALL BE REBEDDED WITH CONCRETE AT NO EXTRA COST TO THE CITY.

STANDARD PLAN NO. S-253-0	VAULT INDEX NUMBER B-3867	SHEET 2 OF 2 SHEETS



CONCRETE BLANKET

(FOR EXISTING PIPES CROSSED OVER BY A NEW PIPE)

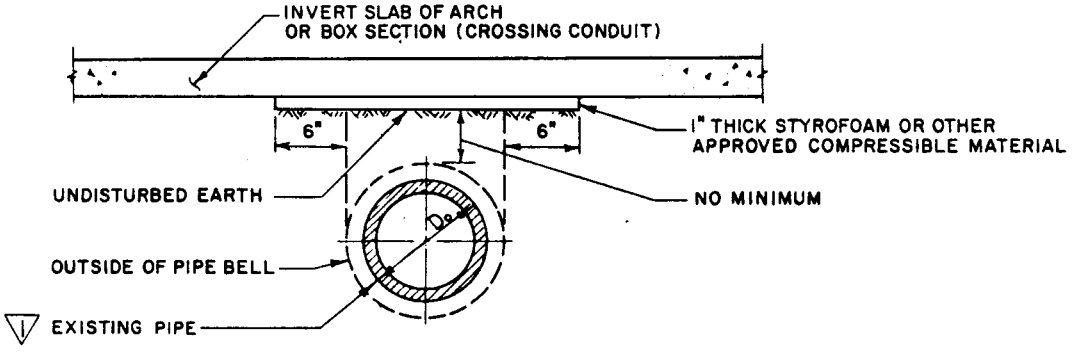
NOTES FOR CONCRETE BLANKET:

1. CONCRETE BLANKET IS REQUIRED WHEN THE CLEARANCE BETWEEN THE TOP OF THE EXISTING PIPE AND THE BOTTOM OF THE CROSSING PIPE IS LESS THAN 18 INCHES.

▽1 2. "Y" = D/6, 4 INCHES MINIMUM (WHERE THE CLEARANCE BETWEEN THE TOP OF THE EXISTING PIPE AND THE BOTTOM OF THE CROSSING PIPE IS LESS THAN "Y", THE CONCRETE SHALL BE PLACED BETWEEN THE PIPES AND AROUND THE SIDES OF THE CROSSING PIPE UP TO A LEVEL EQUAL TO "Y" ABOVE THE EXISTING PIPE, OR AS REQUIRED BY NOTE 3 BELOW, WHICH EVER IS HIGHER.)

▽1 3. "X" = $D_1/8$ MINIMUM, TO PROVIDE BEDDING MATERIAL FOR THE CROSSING CONDUIT. WHEN "X" IS LESS THAN THIS MINIMUM, THE ENTIRE TOP SURFACE OF THE BLANKET SHALL EXTEND TO A LEVEL OF $0.15D_1$ ABOVE THE BOTTOM OF THE CROSSING PIPE.

▽1 4. THE BLANKET SHALL EXTEND LONGITUDINALLY BEYOND THE TRENCH EXCAVATION TO ONE FOOT BEFORE THE FIRST PIPE JOINTS, EXCEPT THAT THE BLANKET NEED NOT EXTEND MORE THAN 4 FEET BEYOND EACH SIDE OF THE TRENCH.



COMPRESSIBLE BLANKET

▽1 (FOR EXISTING PIPES CROSSED OVER BY A NEW BOX OR ARCH)

NOTES FOR COMPRESSIBLE BLANKET:

1. COMPRESSIBLE BLANKET IS REQUIRED WHEN THE CLEARANCE BETWEEN THE TOP OF THE EXISTING PIPE AND THE BOTTOM OF THE CROSSING CONDUIT (BOX OR ARCH) IS LESS THAN 18 INCHES.

2. THE BLANKET SHALL EXTEND LONGITUDINALLY FOR THE FULL CROSSING CONDUIT TRENCH WIDTH.

NOTES

GENERAL

1. MAINTENANCE HOLE FRAME AND COVER SHALL CONFORM TO THE STANDARD SPECIFICATIONS, BROWN BOOK AND THE CITY OF LOS ANGELES STANDARD PLAN S-601 LATEST EDITION. IN CASE OF A CONFLICT BETWEEN THIS STANDARD PLAN "S-281-3" AND OTHER CITY OF LOS ANGELES STANDARD PLANS INCLUDING BUT NOT LIMITED TO STANDARD PLAN "S-601" LATEST EDITION, THIS STANDARD PLAN "S-281-3" SHALL GOVERN.

2. MAINTENANCE HOLE FRAME AND COVER SHALL BE CAST IRON CONFORMING TO SECTION 206-3 OF THE STANDARD SPECIFICATIONS AND SHALL RECEIVE AN ASPHALTIC COATING, AFTER FABRICATION EXCEPT MACHINED SURFACES, CONFORMING TO SECTION 206-3.6 OF THE STANDARD SPECIFICATIONS.

3. ALL HOLES IN CAST IRON SHALL BE DRILLED AFTER CASTING OR PLUGGED PRIOR TO CASTING. THEY SHALL NOT BE PUNCHED.

4. WEIGHT OF MAINTENANCE HOLE FRAME AND COVER SHALL BE PER THE FOLLOWING TABLE :

WEIGHT RANGE	**MINIMUM**		**MAXIMUM**
FRAME	250 LBS	-	275 LBS
COVER	175 LBS	-	195 LBS

TESTING

5. MAINTENANCE HOLE FRAME AND COVER SHALL BE TESTED FOR ACCURATE FIT, AND MARKED IN SETS PRIOR TO DELIVERY TO THE JOB SITE.

6. MAINTENANCE HOLE FRAME AND COVER SHALL BE TESTED FOR STRUCTURAL AND IMPACT LOADING, DEFLECTION, LONG TERM ABRASION AND SLIP RESISTANCE IN ACCORDANCE WITH THE CITY OF LOS ANGELES STANDARD PLAN S-601, LATEST EDITION.

7. PROVIDE FABRICATION / BATCH INSPECTION PER SUBSECTION 206-3.2 OF THE STANDARD SPECIFICATION. THE PROOF-LOAD FOR TEST METHOD B, SUBSECTION 206-3.2 OF THE STANDARD SPECIFICATION IS 52,000 LBS.

MARKINGS

8. MAINTENANCE HOLE COVERS FOR USE ON SEWER STRUCTURES SHALL BEAR THE LETTER "S" AND ON STORM DRAIN STRUCTURES THE LETTER "D" LOCATED AT THE CENTER OF THE COVER. SEE DETAIL B ON SHEET 2.

9. MARKINGS LOCATED ON FRAME AND TOP OF COVER SHALL BE FLUSH WITH FINISHED SURFACE. MARKINGS LOCATED ON THE COVER SOFFIT SHALL BE RAISED ABOVE THE ADJACENT FINISHED SURFACE. ETCHING, DIE STAMPING, ENGRAVING OR WELDING ON MARKINGS WILL NOT BE ACCEPTED.

10. COVER TYPE, IDENTIFICATION, FOUNDRY, HEAT NUMBER, MANUFACTURING DATE AND THE ENGLISH NAME OF COUNTRY OF ORIGIN PRECEDED BY "MADE IN" MARKINGS SHALL BE PER THE FOLLOWING TABLE. ALL MARKINGS SHALL BE RAISED, FLAT FACE LETTERS MARKED BY MEANS OF CAST-IN-MOLD LETTERING.

B - 4666

NOTES

GENERAL

1. MAINTENANCE HOLE FRAME AND COVER SHALL CONFORM TO THE STANDARD SPECIFICATIONS, BROWN BOOK AND THE CITY OF LOS ANGELES STANDARD PLAN S-601 LATEST EDITION. IN CASE OF A CONFLICT BETWEEN THIS STANDARD PLAN "S-286-2" AND OTHER CITY OF LOS ANGELES STANDARD PLANS INCLUDING BUT NOT LIMITED TO STANDARD PLAN "S-601" LATEST EDITION, THIS STANDARD PLAN "S-286-2" SHALL GOVERN.

2. MAINTENANCE HOLE FRAME AND COVER SHALL BE CAST IRON CONFORMING TO SECTION 206-3 OF THE STANDARD SPECIFICATIONS AND SHALL RECEIVE AN ASPHALTIC COATING, AFTER FABRICATION EXCEPT MACHINED SURFACES, CONFORMING TO SECTION 206-3.6 OF THE STANDARD SPECIFICATIONS.

3. ALL HOLES IN CAST IRON SHALL BE DRILLED AFTER CASTING OR PLUGGED PRIOR TO CASTING. THEY SHALL NOT BE PUNCHED.

4. WEIGHT OF MAINTENANCE HOLE FRAME AND COVER SHALL BE PER THE FOLLOWING TABLE :

WEIGHT RANGE	**MINIMUM**		**MAXIMUM**
FRAME	360 LBS	-	395 LBS
COVER	425 LBS	-	470 LBS

TESTING

5. MAINTENANCE HOLE FRAME AND COVER SHALL BE TESTED FOR ACCURATE FIT, AND MARKED IN SETS PRIOR TO DELIVERY TO THE JOB SITE.

6. MAINTENANCE HOLE FRAME AND COVER SHALL BE TESTED FOR STRUCTURAL AND IMPACT LOADING, DEFLECTION, LONG TERM ABRASION AND SLIP RESISTANCE IN ACCORDANCE WITH THE CITY OF LOS ANGELES STANDARD PLAN S-601, LATEST EDITION.

7. PROVIDE FABRICATION / BATCH INSPECTION PER SUBSECTION 206-3.2 OF THE STANDARD SPECIFICATION. THE PROOF-LOAD FOR TEST METHOD B, SUBSECTION 206-3.2 OF THE STANDARD SPECIFICATION IS 52,000 LBS.

MARKINGS

8. MAINTENANCE HOLE COVERS FOR USE ON SEWER STRUCTURES SHALL BEAR THE LETTER "S" AND ON STORM DRAIN STRUCTURES THE LETTER "D" LOCATED AT THE CENTER OF THE COVER. SEE DETAIL B ON SHEET 2.

9. MARKINGS LOCATED ON FRAME AND TOP OF COVER SHALL BE FLUSH WITH FINISHED SURFACE. MARKINGS LOCATED ON THE COVER SOFFIT SHALL BE RAISED ABOVE THE ADJACENT FINISHED SURFACE. ETCHING, DIE STAMPING, ENGRAVING OR WELDING ON MARKINGS WILL NOT BE ACCEPTED.

10. COVER TYPE, IDENTIFICATION, FOUNDRY, HEAT NUMBER, MANUFACTURING DATE AND THE ENGLISH NAME OF COUNTRY OF ORIGIN PRECEDED BY "MADE IN" MARKINGS SHALL BE PER THE FOLLOWING TABLE. ALL MARKINGS SHALL BE RAISED, FLAT FACE LETTERS MARKED BY MEANS OF CAST-IN-MOLD LETTERING.

COVER		MARKINGS	FRAME
TOP SURFACE (Traffic side)	**BOTTOM SURFACE** (Soffit/ Underside)	DESCRIPTION, LOCATION AND SIZE * (**Height** x Line Width x Depth)	**INNER BASE** (Exposed side)
		IDENTIFICATION	
1-1/2" X 1/4" X 3/16"		" **PRIVATE** " or " **CITY OF LOS ANGELES** "	**5/16"** X 3/16" X 3/16"
		COUNTRY OF ORIGIN	
1-1/2" X 1/4" X 3/16"		**MADE IN** " **THE ENGLISH NAME OF COUNTRY OF ORIGIN** "	**5/16"** X 3/16" X 3/16"
		TYPE of MAINTENANCE HOLE	
Height X 1/4" X 3/16" (See Detail B)		" **S** " for Sewer MH " **D** " for Storm Drain MH	
		OTHER	
	5/16" X 3/16" X 3/16"	**FOUNDRY NAME** **MANUFACTURING DATE** and/ **HEAT NUMBER**	**5/16"** X 3/16" X 3/16"

*** Adjust spacing, kerning and/or mortising of letters as needed such that letters appear evenly spaced. The minimum spacing between words shall be ½ of the letter height specified.**

SHEET 1 OF 2 SHEETS

NOTES

1. CONCRETE SHALL BE CLASS 560-C-3250 PER SECTION 201 OF THE STANDARD SPECIFICATIONS. WHERE THE JUNCTION STRUCTURE IS TO BE CONSTRUCTED WITHIN THE LIMITS OF OR IS CONTIGUOUS TO A PROPOSED SIDEWALK, THE TOP SLAB OF THE JUNCTION STRUCTURE SHALL BE PLACED MONOLITHIC WITH THE SIDEWALK, AND THE SIDEWALK SHALL BE PROVIDED WITH A WEAKENED PLANE OR A CONTINUOUS 1-INCH DEEP SAW CUT AROUND THE EXTERNAL PERIMETER OF THE JUNCTION STRUCTURE WALLS, INCLUDING ACROSS THE FULL WIDTH OF THE SIDEWALK. THE SURFACE OF ALL EXPOSED CONCRETE SHALL CONFORM IN SLOPE, GRADE, COLOR, FINISH, AND SCORING TO EXISTING OR PROPOSED SIDEWALK ADJACENT TO THE JUNCTION STRUCTURE.
2. ALL CURVED CONCRETE SURFACES SHALL BE FORMED BY CURVED FORMS, AND SHALL NOT BE SHAPED BY PLASTERING.
3. THE FLOOR OF THE JUNCTION STRUCTURE SHALL BE GIVEN A STEEL TROWEL FINISH AND SHALL HAVE A SLOPE OF 1:12 IN EACH DIRECTION AND SLOPED TO THE OUTLET.
4. CONNECTOR PIPES SHALL BE PLACED AS INDICATED ON THE PROJECT PLANS. THE CONNECTOR PIPE CENTER LINE SHALL INTERSECT THE MIDPOINT OF THE INSIDE FACE OF THE INDICATED JUNCTION STRUCTURE WALL, OR IF INDICATED AT A CORNER, IT SHALL INTERSECT THE INSIDE CORNER. PIPE MAY BE CUT AND TRIMMED AT A SKEW NECESSARY TO INSURE MINIMUM 3-INCH EMBEDMENT, ALL AROUND, WITHIN THE JUNCTION STRUCTURE WALLS, AND 3-INCH RADIUS OF ROUNDING OF STRUCTURE CONCRETE, ALL AROUND, ADJACENT TO PIPE ENDS. A MONOLITHIC CONNECTION PER STANDARD PLAN S-331 SHALL BE USED TO JOIN THE CONNECTOR PIPE TO THE JUNCTION STRUCTURE WHENEVER ANGLE "A" IS LESS THAN 70 DEGREES OR GREATER THAN 110 DEGREES, OR WHENEVER THE CONNECTOR PIPE IS LOCATED AT A CORNER. THE OPTIONAL USE OF A MONOLITHIC CONNECTION IN ANY CASE IS PERMITTED. MONOLITHIC CONNECTIONS MAY BE EXTENDED UP TO 4 FEET IN LENGTH TO AVOID CUTTING STANDARD LENGTHS OF PIPE. CONNECTOR PIPE MAY NOT BE CUT FOR ANY REASON EXCEPT TO AVOID CONSTRUCTION OF A MONOLITHIC CONNECTION.
5. DOWELS SHALL BE REQUIRED AT EACH CORNER WHEN THE TOP SLAB IS NOT PLACED MONOLITHICALLY WITH A SIDEWALK. WHEN THE TOP SLAB IS PLACED MONOLITHIC WITH ADJACENT SIDEWALK, THE DOWELS MAY BE OMITTED.
6. THE MANHOLE FRAME AND COVER SHALL CONFORM TO STANDARD PLAN S-346, EXCEPT THAT, WHERE THE PROJECT PLANS INDICATE SPECIAL SIDEWALK, SQUARE MANHOLE FRAME AND PAN COVER AND IDENTIFICATION PLATE CONFORMING TO STANDARD PLAN S-345 SHALL BE INSTALLED. THE FRAME AND COVER SHALL BE INSTALLED IN A CORNER AS SHOWN HEREON, AND IN SUCH A MANNER THAT THE INSIDE OF THE FRAME SHALL BE FLUSH WITH THE INSIDE OF TWO WALLS, ONE OF WHICH SHALL CONTAIN THE OUTLET PIPE CONNECTION.
7. STEPS SHALL CONFORM TO STANDARD PLAN S-348 AND SHALL BE DIRECTLY BELOW THE MANHOLE FRAME AND COVER.
8. THE INTERSECTION OF THE CENTER LINES OF THE STRUCTURE SHALL BE CONSTRUCTED AT THE LOCATION INDICATED ON THE PROJECT PLANS. WHEN THE STRUCTURE IS CONSTRUCTED ADJACENT TO A CURB ON A CURVE, ONE OF THE STRUCTURE CENTER LINES SHALL BE RADIAL TO THE CURVE.
9. DIMENSIONS:
   B = 3'-0", L = 3'-0"
   F = 6"
   V = 3'-6"
   D = 1'-6"
   A = THE ANGLE, IN DEGREES, FORMED BY THE CENTER LINE OF THE CONNECTOR PIPE AND THE JUNCTION STRUCTURE WALL TO WHICH THE CONNECTOR PIPE IS ATTACHED. (SEE PROJECT PLANS.)
   t = 4-1/2" FOR STANDARD SIDEWALK, AND 6" FOR SPECIAL SIDEWALK. (SEE PROJECT PLANS.)

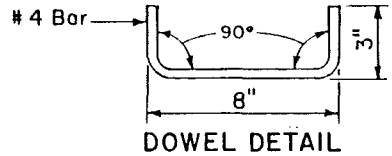
SECTION E-E



DOWEL DETAIL

NOTES

1. Values for Angle F and dimensions J-K, L-M, W and H are shown on the improvement plan.
2. Concrete shall be 560-C-3250.
3. Surface of all exposed concrete shall match grade, color, finish and scoring of adjacent curb and walk.
4. Any curb replaced during construction shall be poured monolithically with the culvert walls.
5. The bottom slab of the culvert shall be poured monolithically with new gutter or as a cold joint where joining existing gutter.
6. Invert shall be troweled and retroweled to produce a hard polished surface of maximum density and smoothness. If "V" invert is specified, it shall be V-shaped to within 3' of the outlet and warped from this point to the outlet. The invert at the outlet shall parallel the gutter flow line unless otherwise shown on the improvement plan.

▽2 7. Culvert steel top plates shall be as follows:

   A. t = 1/4" for W ≤ 2'; 3/8" for 2' < W ≤ 3'; 1/2" for 3' < W ≤ 4'.
   B. Cut perpendicular to culvert walls unless otherwise specified.
   C. Lengths shall be such that the weight per plate does not exceed 300 pounds.
   D. They shall be stress relieved and straightened after fabrication and then galvanized.
   E. Top of steel plate shall have a minimum coefficient of static friction of 0.5, for either wet or dry conditions, when tested for any shoe sole material. Testing and certification of the friction factor shall be conducted by an independant testing laboratory approved by the Engineer under the direction of a registered Civil, Mechanical or Quality Engineer. Testing shall conform to ASTM D2047 or F 489 or F 609 or other procedure approved by the Engineer.

8. Stainless steel rod anchors shall be spaced a maximum of 24" c-c with a minimum of two per side per plate. There shall be an anchor within 6" of each end. The anchors shall be attached to the plates and the plates secured in place prior to pouring the walls.

▽2 9. The contractor may, at his option, utilize any of the three alternates for the fabrication of the steel plate at the curb face shown in section D-D.

VAULT INDEX NUMBER B-3976

NOTES FOR ALLEY GRATING BASIN

1. THE BASIN SHALL BE CONSTRUCTED WITH ONE GRATING UNLESS OTHERWISE INDICATED ON THE PROJECT PLANS.
2. INSTALL FRAME AND GRATING AT THE GRADE OF THE GUTTER. FRAMES AND GRATINGS SHALL CONFORM TO STANDARD PLAN S-342. WHEN MORE THAN ONE GRATING IS SPECIFIED ON THE PROJECT PLANS, INSTALL A CENTER SUPPORT ASSEMBLY CONFORMING TO STANDARD PLAN S-342 BETWEEN ADJACENT FRAMES.
3. CONCRETE SHALL BE THE CLASS SPECIFIED IN SECTION 201 OF THE STANDARD SPECIFICATIONS. SURFACE OF ALL EXPOSED CONCRETE SHALL CONFORM IN SLOPE, GRADE, COLOR, AND FINISH TO ANY EXISTING OR PROPOSED CONCRETE ADJACENT TO THE BASIN.
4. ALL CURVED CONCRETE SURFACES SHALL BE FORMED BY CURVED FORMS AND SHALL NOT BE SHAPED BY PLASTERING.
5. THE FLOOR OF THE BASIN SHALL BE GIVEN A STEEL TROWEL FINISH AND SHALL HAVE A LONGITUDINAL AND LATERAL SLOPE OF 1:12, EXCEPT WHERE THE ALLEY GRADE EXCEEDS 8 PERCENT, IN WHICH CASE THE LONGITUDINAL SLOPE OF THE FLOOR SHALL BE THE SAME AS THE ALLEY GRADE. SLOPE FLOOR FROM ALL DIRECTIONS TO THE OUTLET.
6. DIMENSIONS:

   W = 2 FEET 11-3/8 INCHES FOR ONE GRATING. ADD 3 FEET 5-3/8 INCHES FOR EACH ADDITIONAL GRATING.
   B = 2 FEET 1-1/2 INCHES
   V = 4.5 FEET. WHERE CATCH BASINS ARE IN SERIES, "V_0" SHALL BE THE DEPTH TO THE INVERT OF THE INLET PIPE, AND "V" SHALL BE THE DEPTH TO THE INVERT OF THE OUTLET PIPE.
   M = 1 FOOT
   G = 3 FEET
   D = 8 INCHES
   I - SEE STRUCTURAL DATA HEREON.
   A = THE ANGLE, IN DEGREES, INTERCEPTED BY THE CENTERLINE OF THE CONNECTOR PIPE AND THE CATCH BASIN WALL TO WHICH THE CONNECTOR PIPE IS ATTACHED.

7. PLACE CONNECTOR PIPES AS INDICATED ON THE PROJECT PLANS. UNLESS OTHERWISE DETAILED ON THE PROJECT PLANS, A CONNECTOR PIPE CENTERLINE SHALL INTERSECT THE MID POINT OF THE INSIDE FACE OF THE INDICATED CATCH BASIN WALL, OR IF INDICATED AT A CORNER, IT SHALL INTERSECT THE INSIDE CORNER. THE PIPE MAY BE CUT AND TRIMMED AT A SKEW NECESSARY TO INSURE MINIMUM 3 INCH PIPE EMBEDMENT, ALL AROUND, WITHIN THE CATCH BASIN WALL, AND 3 INCH RADIUS OF ROUNDING OF STRUCTURE CONCRETE, ALL AROUND, ADJACENT TO PIPE ENDS. A MONOLITHIC CONNECTION PER STANDARD PLAN S-331 SHALL BE USED TO JOIN THE CONNECTOR PIPE TO THE CATCH BASIN WHENEVER ANGLE "A" IS LESS THAN 70 DEGREES OR GREATER THAN 110 DEGREES, OR WHENEVER THE CONNECTOR PIPE IS LOCATED IN A CORNER. THE OPTIONAL USE OF A MONOLITHIC CONNECTION IN ANY CASE IS PERMITTED. MONOLITHIC CONNECTIONS MAY BE EXTENDED UP TO 4 FEET IN LENGTH TO AVOID CUTTING STANDARD LENGTHS OF PIPE. CONNECTOR PIPE MAY NOT BE CUT FOR ANY REASON EXCEPT TO AVOID CONSTRUCTION OF A MONOLITHIC CONNECTION.
8. STEPS SHALL CONFORM TO STANDARD PLAN S-348.
9. ANCHORS SHALL CONFORM TO STANDARD PLAN S-342, AND SHALL BE INSTALLED AS SHOWN HEREON.
10. CONSTRUCT CONCRETE GUTTER TRANSITIONS AS SHOWN HEREON.
11. ALL CONSTRUCTION JOINTS SHALL HAVE ROUGH SURFACES. (SEE SECTION 303-1.8.6 OF THE STANDARD SPECIFICATIONS.)
12. REMOVE EXISTING PAVEMENT WITHIN REMOVAL LIMITS SHOWN HEREON AND RECONSTRUCT IN CONFORMANCE WITH SECTION 306-1.5 OF THE STANDARD SPECIFICATIONS.

SECTION B-B

NOTES FOR CATCH BASIN NO. 61 (PRECAST)

1. Catch Basin No. 61 may be installed in lieu of Catch Basin No. 38 when the curb face is 10-inches or less and the V-dimension shown on the project drawings is equal to or larger than the minimum shown hereon.
2. Inlet Steel Plate shall be fabricated from 5/16" x 14" Universal Mill Plate and galvanized.
3. Protection Bar:
   a. When the curb face exceeds 9¼-inches, a 1-inch diameter plain round galvanized steel protection bar shall be placed horizontally across the opening of the basin.
   b. One-inch diameter galvanized steel inserts for the protection bar, Burke High Tensile Threaded Insert or equal, shall be cast in each sidewall of the Inlet Section.
   c. The galvanized steel pipe sleeve shall be installed at the downstream end of the catch basin opening. The brass socket set screw shall not be visible in a frontal view of the catch basin opening.
4. Gutter Depression shall be constructed in accordance with the detail for warped gutter per Standard Plan B-3746 unless otherwise specified.
5. Invert Section Floor shall be given a steel trowel finish. Where construction methods do not permit trowelling, Class 658-B-3750 concrete shall be used. Invert shall be sloped toward the outlet for Case 1, and toward the flow lines for Cases 2 and 3. The maximum difference in elevation between flow lines and the edge of the floor shall not exceed 3-inches.

NOTES FOR CATCH BASIN NO. 61 CONTINUED (PRECAST)

6. Concrete for the precast sections shall be Class 564-B-3250. When the basin is to be assembled within the limits of a proposed sidewalk, the top 2½-inches of the basin shall be poured monolithic with the sidewalk using the same class of concrete as the sidewalk and shall conform in slope, grade, color, finish and scoring to existing or proposed walk adjacent to the basin.
7. Standard Manhole Frame and Cover per Standard Plan B-2189 shall be placed at grade prior to pouring the catch basin top slab and shall be located as shown herein. Install Manhole Cover Locking Device per Standard Plan B-3233.
8. Dimensions:

Minimum V	3'-11"	3'-8"	3'-5"
Connector Pipe Diameter	18"	15"	12"

R_n=1'-3" unless otherwise specified
S_n=0'-9" unless otherwise specified
T_n=0'-1 ⅜" unless otherwise specified
— See Catch Basin Inlet Detail on Sheet No. 1

9. Joints of Inlet Section, Transition Section, Grade Rings, and Invert Section shall be filled with Class "C" mortar and neatly pointed on the inside of basin.
10. Curvature of the Inlet Section sidewalls shall be formed by curved forms and shall not be made by plastering.
11. Junction of Invert Section and connector pipe(s) shall be filled with Class "C" mortar. Interior surface of the connection shall be smooth, clean and free from pockets and protuberances.
12. Precast section shall have handling devices to provide mechanical placement of the sections. The Inlet Section shall have a Superior Concrete Accessories' 1"x3½" Type "S" Coil or equal centered on the exterior of each sidewall. The Transition and Invert Sections shall have slots integrally cast in the interior walls for lifting bars.
13. Alignment: The top frontal edge of the Inlet Section shall be aligned with the top frontal edge of the adjacent curb.
14. Steps are required 12-inches apart when "V" is greater than 4 feet 6 inches. The top step shall be 2-inches below the soffit and 2½-inches from the wall. Only one step 12-inches from the bottom is required for "V" less than 4 feet 6 inches. Steps shall be 4-bend, ¾-inch round galvanized steel, 14-inches wide, with 10-inch legs; Alhambra Foundry Company's Step No. A-3309 or equal. The steps shall be 6-inches from the wall of the basin, with the exception of the top step as above. Install steps in basin wall in 1-inch diameter drilled holes and grout.
15. Anchors shall be ½-inch round steel anchors or Nelson H4F Head Anchors, or equal, electrically welded, ½-inch in diameter by 8-inches long.
16. Bedding Material for the catch basin or any material conforming to the Standard Specification requirements for select material for base shall be spread to a minimum depth of 6-inches over the bottom of the excavation. Bedding for the inlet and outlet pipes shall be Class 470-B-2000 concrete poured between wall of excavation and wall of catch basin per detail on Sheet 3.
17. Epoxy that is approved by the Engineer shall be placed on surfaces of Inlet Section before placing gutter.
18. Monolithic Connection shall be tied to catch basin with ½-inch diameter by 8-inch long foundation bolts.

NOTES

1. UNLESS OTHERWISE INDICATED ON THE PROJECT PLANS, TYPE I MANHOLE SHALL BE CONSTRUCTED.

2. CONCRETE SHALL BE CLASS 560-C-3250 PER SECTION 201 OF THE STANDARD SPECIFICATIONS.

3. DIMENSIONS

   H = 4'0". (SUBJECT TO THE APPROVAL OF THE ENGINEER, THE CONTRACTOR MAY INCREASE "H" PROVIDED THE MINIMUM REQUIREMENTS OF "M" AND "P" ARE MET.)

   L = 4'0". (SUBJECT TO THE APPROVAL OF THE ENGINEER, THE CONTRACTOR MAY INCREASE "L" OR CHANGE THE LOCATION OF THE STATION POINT IN ORDER TO MEET PIPE ENDS OR OTHER FIELD CONDITION.)

   P = AS INDICATED HEREON. (SUBJECT TO THE APPROVAL OF THE ENGINEER, "P" MAY BE REDUCED TO NOT LESS THAN 6-INCHES WHEN A LARGER VALUE OF "P" WOULD CAUSE "H" TO BE LESS THAN 3'6".)

   B = 3'6"

   T = 8" FOR $H \leq 8'-0"$; T = 10" WHEN $H > 8'-0"$

   M = SEE PROJECT PLANS

   A = SEE PROJECT PLANS

4. REINFORCEMENT SHALL CONFORM TO SECTION 201 OF THE STANDARD SPECIFICATIONS AND AS SHOWN HEREON.

5. A STEEL TROWEL SURFACE SHALL BE PROVIDED FOR THE CONCRETE FLOOR OF THE STRUCTURE AND TO THE INSIDE CONCRETE WALLS FROM THE INVERT TO THE SPRING LINE.

6. CONCRETE FOR THE STRUCTURE SHALL BE PLACED IN ONE CONTINUOUS OPERATION, EXCEPT THAT THE CONTRACTOR MAY, AT HIS OPTION, PLACE AT THE SPRING LINE A CONSTRUCTION JOINT WITH A 2-INCH BY 4-INCH HORIZONTAL KEYWAY.

7. WHERE LATERALS ENTER ON BOTH SIDES OF THE STRUCTURE, THEY SHALL BE DESIGNATED ON THE PROJECT PLANS AS RIGHT OR LEFT, FACING IN THE DIRECTION OF STATIONING.

8. MANHOLES SHALL BE LOCATED SO THAT THE VERTICAL SIDE OF THE MANHOLE SHAFT AND THE ECCENTRIC REDUCER SHALL BE LOCATED ABOVE AND IN LINE WITH THE SIDE OF THE MAINLINE BELOW THE MANHOLE AND ON THE SIDE OPPOSITE THE LATERAL. IF LATERALS ENTER BOTH SIDES OF THE STRUCTURE, THE MANHOLE SHALL BE LOCATED ON THE SAME SIDE AS THE SMALLER LATERAL.

9. INSTALL STEPS CONFORMING TO STANDARD PLAN S-348.

10. RINGS, REDUCER, PIPE AND PIPE SEAT FOR MANHOLE SHAFT SHALL CONFORM TO STANDARD PLAN S-387.

11. INSTALL MANHOLE FRAME AND COVER CONFORMING TO STANDARD PLAN S-281.

12. PLACE PIPES AS INDICATED ON THE PROJECT PLANS. UNLESS OTHERWISE DETAILED ON THE PROJECT PLANS, THE PIPE CENTERLINE SHALL INTERSECT THE MIDPOINT OF THE INSIDE FACE OF THE INDICATED MANHOLE WALL. THE PIPE MAY BE CUT AND TRIMMED AT A SKEW NECESSARY TO INSURE MINIMUM 3 INCH PIPE EMBEDMENT, ALL AROUND, WITHIN THE MANHOLE WALL, AND 3 INCH RADIUS OF ROUNDING OF STRUCTURE CONCRETE, ALL AROUND, ADJACENT TO PIPE ENDS. A MONOLITHIC CONNECTION PER STANDARD PLAN S-331 SHALL BE USED TO JOIN THE PIPE TO THE MANHOLE WHENEVER ANGLE "A" IS LESS THAN 70 DEGREES OR GREATER THAN 110 DEGREES. THE OPTIONAL USE OF A MONOLITHIC CONNECTION IN ANY CASE IS PERMITTED. MONOLITHIC CONNECTIONS MAY BE EXTENDED UP TO 4 FEET IN LENGTH TO AVOID CUTTING STANDARD LENGTHS OF PIPE.

NOTES

2 1. CURBS AND GUTTERS SHALL BE CONSTRUCTED OF PCC CONFORMING TO SUBSECTION 201-1 AND 303-5.

2 2. WEAKENED-PLANE JOINTS IN CURB AND GUTTER SHALL CONFORM TO STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION SUBSECTION 303-5.4.3 (C) OR SHALL BE 1-1/2 INCH DEEP SAWCUTS MADE WITHIN 10 TO 24 HOURS AFTER CONCRETE IS PLACED AND SHALL BE PLACED AT LOCATIONS SHOWN ON THE TYPICAL JOINT PLAN HEREON AND AT REGULAR INTERVALS NOT EXCEEDING 20 FEET BETWEEN RETURNS. THEY SHALL ALSO BE LOCATED AT THE E.C. OF ALLEY RETURNS WHERE WALK IS FULL WIDTH. WHERE CROSS GUTTER TRANSITION EXTENDS BEYOND THE CURB RETURN, THE JOINTS SHALL NORMALLY BE PLACED AT THE ENDS OF THE TRANSITION. HOWEVER, JOINTS SHALL ALSO BE PLACED AT THE ENDS OF THE CURB RETURN WHEN THE CROSS GUTTER TRANSITION EXTENDS MORE THAN 5 FEET BEYOND THE RETURN. WHERE GUTTER IS ADJACENT TO CONCRETE PAVEMENT, THE JOINT SHALL BE ALIGNED WITH THE PAVEMENT JOINTS WHERE PRACTICAL.

2 3. A CONTACT JOINT SHALL BE PLACED IN LONGITUDINAL ALLEY GUTTER WHERE IT JOINS CONCRETE ALLEY INTERSECTION.

2 4. CURBS CONSTRUCTED ADJACENT TO EXISTING CURBS HAVING A BATTER OTHER THAN SPECIFIED FOR THE NEW CURBS SHALL BE CONSTRUCTED WITH A TRANSITION SECTION BETWEEN THE CURBS HAVING DIFFERENT BATTERS. THE MINIMUM TRANSITION LENGTH SHALL BE:

TYPE OF CURB	MINIMUM TRANSITION LENGTH
BARRIER CURB TO BARRIER CURB	5'
MOUNTABLE CURB TO MOUNTABLE CURB	10'
BARRIER CURB TO MOUNTABLE CURB	20'

2 5. THE DOWELS IN THE DOWELED CURB MAY BE DELETED AND THE CURB BONDED TO THE SURFACE BY A BONDING AGENT APPROVED BY THE ENGINEER.

2 6. MOUNTABLE CURBS SHALL NOT BE USED ADJACENT TO PEDESTRIAN WALKWAYS.

BUREAU OF ENGINEERING
OFFICIAL RECORD

NOTES

1. ALL WORK SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE LATEST STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION ADOPTED BY THE BOARD OF PUBLIC WORKS AS MODIFIED BY THE CORRESPONDING ISSUE OF THE CITY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS BROWN BOOK.

2. CASE 2 SHALL BE USED IN MOST CIRCUMSTANCES EXCEPT THAT CASE 1 MAY BE USED TO SERVICE R-1 OR R-2 PROPERTY WITH A PARKWAY AND PROVIDED THE Y-SLOPE DOES NOT ENCROACH INTO THE PORTION OF THE DRIVEWAY APPROACH APRON FOR PEDESTRIANS TO CROSS THE DRIVEWAY.

3. CASE 3 SHALL BE USED IN LIEU OF CASE 1 OR CASE 2 RESPECTIVELY TO PRECLUDE THE FOLLOWING CONDITIONS:

   A. A DISTANCE OF LESS THAN 5 FEET BETWEEN A PROPOSED TOP OF "X" AND THE CENTER LINE OF AN ELECTROLIER OR FIRE HYDRANT.

   B. TRAFFIC SIGNALS, UTILITY POLES AND SIGN POSTS IN THE "X" AREA OF A PROPOSED DRIVEWAY.

4. WHERE CASE 3 IS USED, AN ELECTROLIER OR HYDRANT SHALL NOT BE CLOSER THAN 18-INCHES FROM THE DRIVEWAY BCR, AND A TRAFFIC SIGNAL, UTILITY POLE OR SIGN POST SHALL NOT BE CLOSER THAN THE DRIVEWAY BCR.

5. WHERE THERE IS EXISTING INTEGRAL CONCRETE CURB AND GUTTER, BOTH CURB AND GUTTER MUST BE REMOVED. OPTIONAL, IF THE GUTTER IS IN GOOD CONDITION, THE GUTTER MAY BE SAW CUT 4 INCHES TO 6 INCHES FROM THE STREET FLOW LINE AND THE OUTSIDE PORTION LEFT IN PLACE, PROVIDING THAT IT IS NOT LESS THAN 18 INCHES.

6. EITHER TYPE "A" CONCRETE CURB OR TYPE "C" INTEGRAL CONCRETE CURB AND GUTTER SHALL BE EXISTING OR CONSTRUCTED FOR ALL DRIVEWAY APPROACHES. SEE THE LATEST STANDARD PLAN S-410 FOR TYPES OF CURBS. IF EXISTING CURB REQUIRES REMOVAL AND REPLACEMENT, RECONSTRUCT CURB TO MATCH EXISTING CURB TYPE. CITY ENGINEER SHALL DETERMINE THE TYPE OF CURB FOR ALL NEW CURB CONSTRUCTION.

7. WEAKENED PLANE CONTROL JOINTS SHALL BE INSTALLED ALONG BOTH SIDES OF A DRIVEWAY APPROACH APRON AND AT APPROXIMATELY 10 FEET INTERVALS WITHIN THE DRIVEWAY. WHERE THE DISTANCE BETWEEN THE SIDES OF THE DRIVEWAY APPROACH APRON DOES NOT EXCEED 15 FEET, AN INTERMEDIATE WEAKENED PLANE CONTROL JOINT WILL NOT BE REQUIRED.

8. THE AREA INCLUDED WITHIN THE "X" AND "Y" SLOPES (INCLUDING TOP OF CURB) OF THE DRIVEWAY APPROACH SHALL BE FINISHED WITH A WOOD FLOAT. THE BALANCE OF THE DRIVEWAY APPROACH SHALL BE FINISHED IN ACCORDANCE WITH THE LATEST SPECIFICATIONS FOR SIDEWALK.

9. DEFINITIONS AND DIMENSIONS:

DRIVEWAY APPROACH : AREA OF A DRIVEWAY LYING IN THE PUBLIC RIGHT OF WAY BETWEEN THE STREET FLOW LINE AND THE PROPERTY LINE, INCLUDING THE APRON, SIDE SLOPES AND CURB RETURNS WITH SPANDRELS.

DRIVEWAY APPROACH APRON : PORTION OF A DRIVEWAY APPROACH, EXCLUDING THE SIDE SLOPES AND CURB RETURNS WITH SPANDRELS EXTENDING FROM THE STREET FLOW LINE TO THE PROPERTY LINE AND BETWEEN THE ADJOINING SIDEWALK PAVEMENTS.

a = HORIZONTAL LENGTH OF DRIVEWAY APPROACH APRON MEASURED ALONG THE CENTERLINE FROM THE STREET FLOW LINE TO THE PROPERTY LINE.

Q = PORTION OF THE APPROACH APRON FOR PEDESTRIANS TO CROSS THE DRIVEWAY HAVING 4 FEET MINIMUM TRANSVERSE WIDTH AND MAXIMUM TRANSVERSE GRADE OF 2 PERCENT TOWARD THE STREET, INCLUDING THE 1/4-INCH VERTICAL CONSTRUCTION TOLERANCE.

R = DRIVEWAY CURB RETURN RADIUS, 3-FEET MINIMUM, PROVIDING TRANSITION FROM FULL HEIGHT CURB TO THE GRADE OF THE APPROACH APRON.

t = THICKNESS OF CONCRETE DRIVEWAY PAVEMENT, INCLUDING SIDE SLOPES AND CURB RETURN SPANDRELS. A "t" OF 4-INCHES MAY BE USED FOR DRIVEWAYS SERVING NOT MORE THAN FOUR RESIDENTIAL UNITS AND A "t" OF 6 INCHES SHALL BE USE FOR ALL OTHER DRIVEWAYS.

W = WIDTH OF DRIVEWAY APPROACH APRON MEASURED ALONG THE STREET FLOW LINE, EXCLUDING SIDE SLOPES AND CURB RETURNS WITH SPANDRELS. FOR THE "W" WIDTH OF DRIVEWAYS, SEE SECTION 62.105.2 OF THE LOS ANGELES MUNICIPAL CODE.

X = HORIZONTAL LENGTH OF THE SIDE SLOPING PORTION OF THE DRIVEWAY APPROACH, MEASURED ALONG THE STREET FLOW LINE PROVIDING TRANSITION FROM FULL HEIGHT CURB TO THE GRADE OF THE APPROACH APRON.

Y = HORIZONTAL LENGTH OF THE RAMPED PORTION OF THE APPROACH APRON MEASURED ALONG THE DRIVEWAY CENTERLINE FROM THE STREET FLOW LINE TO THE FRONT EDGE OF THE 2 PERCENT TRANSVERSE GRADE FOR PEDESTRIANS.

Y-SLOPE = DIFFERENCE IN ELEVATION ALONG THE DRIVEWAY CENTERLINE BETWEEN THE TOP OF CURB FACE AND THE FRONT EDGE OF THE 2 PERCENT TRANSVERSE GRADE FOR PEDESTRIANS DIVIDED BY THE HORIZONTAL LENGTH OF THE RAMPED PORTION OF DRIVEWAY APPROACH APRON (Y).

NTS

BUREAU OF ENGINEERING
OFFICIAL RECORD

10. THE DEPRESSED CURB FACE HEIGHT ALONG THE DRIVEWAY APPROACH APRON SHALL BE 3/4-INCH WITH NEGLIGIBLE BATTER.

11. 4-INCH UNTREATED AGGREGATE BASE MATERIAL SHALL BE INSTALLED UNDER NEW CONCRETE DRIVEWAYS.

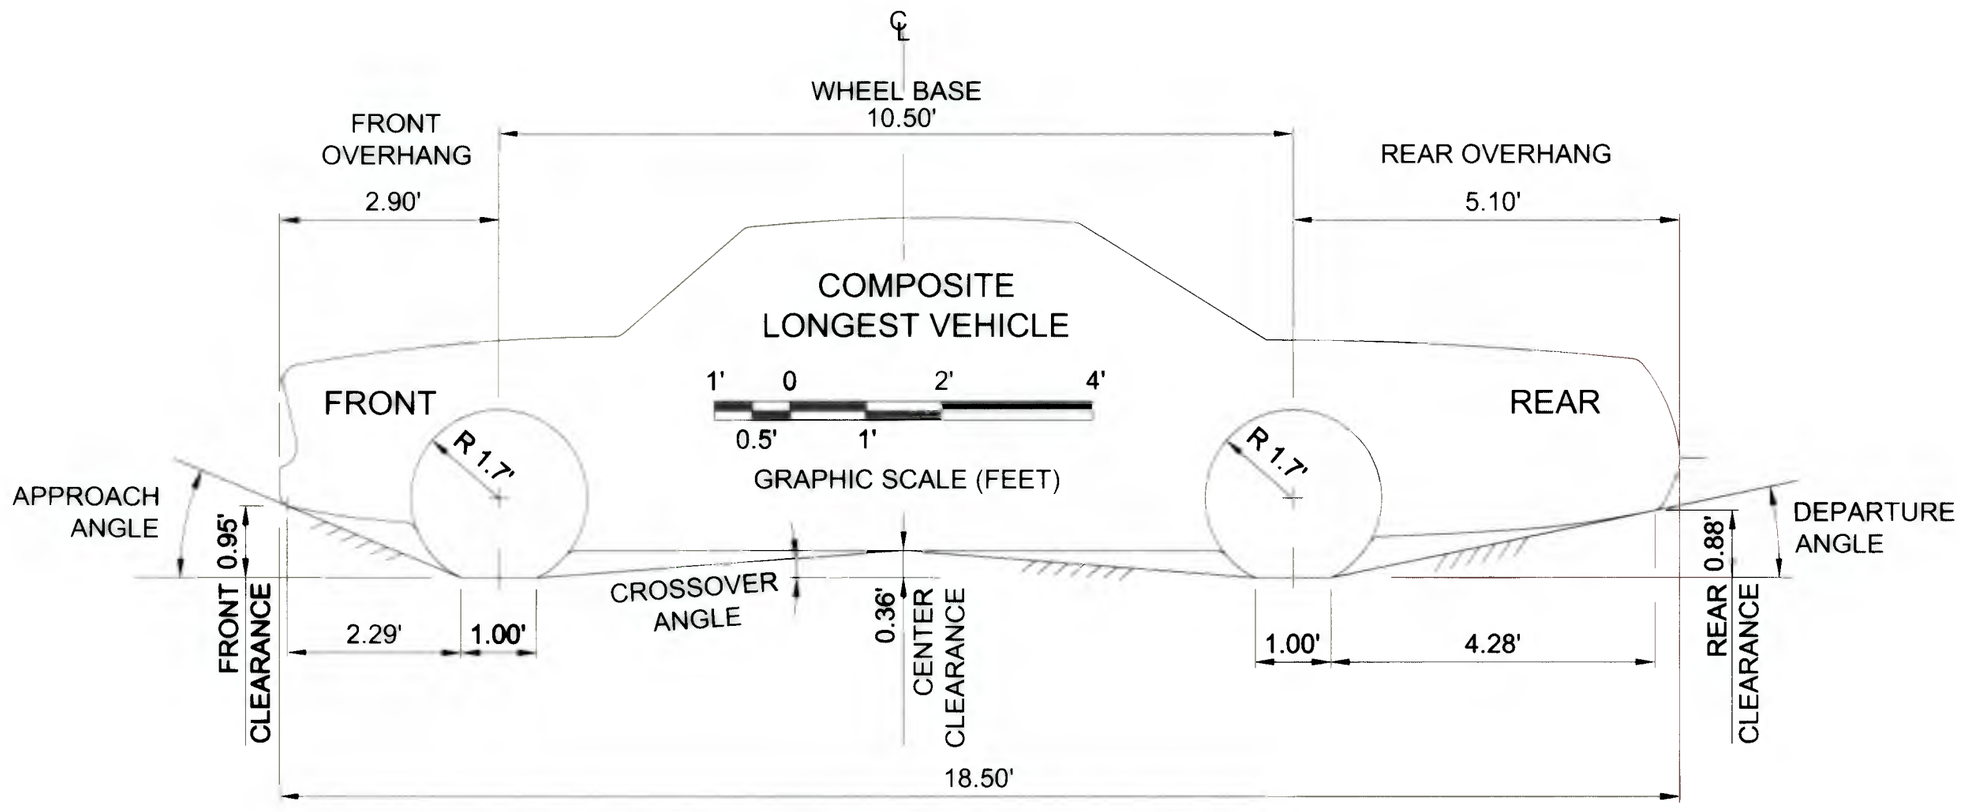
12. THE PORTION OF THE APPROACH APRON FOR PEDESTRIANS TO CROSS THE DRIVEWAY SHALL HAVE A MINIMUM WIDTH "Q" OF 4 FEET AND BE GRADED TOWARD THE STREET FLOW LINE. THE MAXIMUM TRAVERSE GRADE SHALL BE 2 PERCENT AND THE MINIMUM SHALL BE 0.5 PERCENT BOTH INCLUDING THE 1/4-INCH VERTICAL CONSTRUCTION TOLERANCE. "Q" LESS THAN 4 FEET SHALL REQUIRE APPROVAL BY THE CITY ENGINEER.

13. THE RAMPED PORTION OF THE DRIVEWAY APPROACH APRON (Y) SHALL HAVE A MAXIMUM GRADE OF 10 PERCENT. GRADES STEEPER THAN 10 PERCENT SHALL REQUIRE APPROVAL BY THE CITY ENGINEER. (SEE AUTOMOBILE TEMPLATES ON SHEET 4)

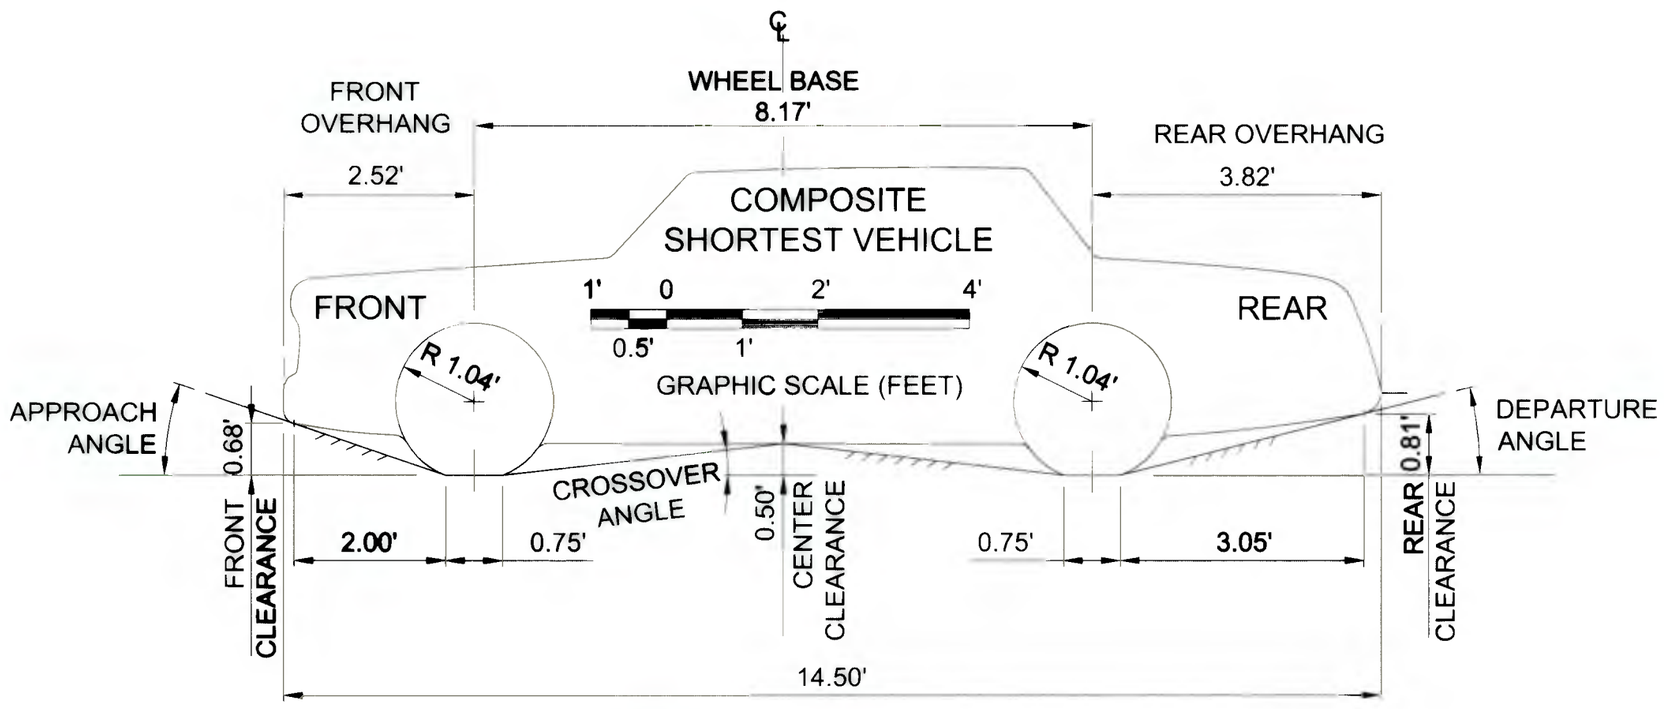
14. FOR DRIVEWAY DESIGNS EXTENDING ON PRIVATE PROPERTY SEE LOS ANGELES DEPARTMENT OF BUILDING AND SAFETY INFORMATION BULLETIN P/ZC2002-001. THIS STANDARD PLAN SHALL GOVERN WHERE INFORMATION IN THIS BULLETIN CONFLICTS WITH INFORMATION FROM THIS STANDARD PLAN.

15. DEPRESSED SIDEWALKS ADJACENT TO DRIVEWAY APPROACH APRONS SHALL REQUIRE APPROVAL BY THE CITY ENGINEER.

16. AT LOCATIONS WHERE ANY S-440-4 REQUIREMENTS CANNOT BE MET, THE DESIGNER AND/OR CONTRACTOR SHALL REQUEST DIRECTION FROM THE CITY ENGINEER PRIOR TO THE COMPLETION OF DESIGN.



COMPOSITE LONGEST VEHICLE



COMPOSITE SHORTEST VEHICLE

AUTOMOBILE TEMPLATES

FOR CHECKING VERTICAL CLEARANCE ALONG DRIVEWAY CENTERLINE

NOTES

THE DRIVEWAY CENTERLINE SHOULD BE PLOTTED TO SCALE (1-INCH EQUALS 2-FEET BOTH HORIZONTALLY AND VERTICALLY) AND EXTEND FROM THE STREET CENTERLINE TO A SUFFICIENT LENGTH BEYOND THE PROPERTY LINE ONTO THE ABUTTING PROPERTY.

NOTES

ALL WORK SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE LATEST STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION (SSPWC) ADOPTED BY THE BOARD OF PUBLIC WORKS AS AMENDED BY THE LATEST CORRESPONDING CITY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS BROWN BOOK.

1. PROVIDE “STANDARD DUAL UNI-DIRECTIONAL CURB RAMPS” CASES A, B OR C WITH THE INTENT OF PROVIDING IN-LINE STREET CROSSING FOR PEDESTRIANS. TO THE MAXIMUM EXTENT POSSIBLE, INDIVIDUAL CURB RAMPS IN CASES A, B AND C SHALL BE ALIGNED WITH THE CROSSWALK MARKINGS, CENTERED WITHIN THE CROSSWALK AND SHALL BE ALIGNED WITH THE CURB RAMPS AT THE OPPOSITE SIDES. OTHER ALIGNING DUAL CONFIGURATIONS IN GENERAL CONFORMANCE TO THIS STANDARD PLAN MAY BE PROPOSED FOR APPROVAL PER NOTE 14. "ALTERNATE BI-DIRECTIONAL CURB RAMP" CASE I MAY BE USED AS APPROVED PER NOTE 14, WHEN EXISTING CONDITIONS OR CONSTRAINTS DO NOT ALLOW FOR "STANDARD DUAL CURB RAMPS" CONSTRUCTION.
2. "SPECIAL CURB RAMPS FOR NARROW SIDEWALKS" CASE H AND "MID-BLOCK UNI-DIRECTIONAL CURB RAMP" CASE E MAY ONLY BE USED FOR NARROW SIDEWALKS 6.0 TO 7.5 FEET IN WIDTH (SIDEWALK WIDTH SHOWN EXCLUDES THE STREET CURB WIDTH). AS APPROVED PER NOTE 14, "ALTERNATE BI-DIRECTIONAL CURB RAMP" CASE J MAY ONLY BE USED WHEN EXISTING FIELD CONDITIONS OR CONSTRAINTS DO NOT ALLOW FOR "SPECIAL CURB RAMPS FOR NARROW SIDEWALKS" CASE H CONSTRUCTION.
3. ALL NOTED SLOPES AND GRADES SHALL BE MEASURED RELATIVE TO THE HORIZONTAL PLANE AND SHALL INCLUDE ALL ALLOWABLE CONSTRUCTION TOLERANCES.
4. PROVIDE A 12 INCH WIDE BORDER IN THE PLANE OF THE SIDEWALK AT CURB RAMPS AS SHOWN WITH 1/4 INCH GROOVES APPROXIMATELY 3/4 INCH ON CENTER. SEE GROOVED BORDER DETAIL ON SHEET 4. THE SURFACE OF THE GROOVED BORDER SHALL HAVE A FINE HAIR BROOMED FINISH.
5. UNLESS OTHERWISE APPROVED PER NOTE 14, CONCRETE CURB RAMPS SHALL BE CONSTRUCTED WITH CLASS 520-C-2500.
6. THE DETECTABLE WARNING SURFACE (DWS) COLOR SHALL CONFORM TO FEDERAL STANDARD 595C COLOR NUMBER FS 33538 (YELLOW) AND SHALL BE INTEGRAL WITH THE DWS. SURFACE COATINGS SUCH AS PAINT SHALL NOT BE ALLOWED TO BE APPLIED ON THE DWS. THE TRUNCATED DOMES OF THE DWS SHALL HAVE IN-LINE PATTERN AND SHALL BE PART OF A PREFABRICATED SURFACE PANEL.
7. CURB RAMPS FINAL SURFACE FINISH WITHIN THE GROOVED BORDERS SHALL BE DONE BY HAND WITH A WOOD FLOAT AND SHALL BE GIVEN A ROTARY SURFACE TEXTURE.
8. STANDARD DIMENSIONS AND DEFINITIONS:

BUREAU OF ENGINEERING
OFFICIAL RECORD

BCR = BEGINNING OF CURB RETURN.
CH = CURB HEIGHT (ALONG THE STREET).
ECR = END OF CURB RETURN.
PL = PROPERTY LINE (PUBLIC RIGHT-OF-WAY LINE).
Q = THE PEDESTRIAN ACCESS ROUTE "Q" SHALL HAVE A MINIMUM CONTINUOUS CLEAR AND UNOBSTRUCTED WIDTH OF 5 FT.
T = THICKNESS OF CONCRETE PAVEMENT. FOR "T" & ASSOCIATED SUBGRADE REQUIREMENTS SEE S-444.
U = TURNING SPACE LENGTH "U" SHALL BE 4 FT MINIMUM. WHERE THE TURNING SPACE IS CONSTRAINED AT THE BACK OF SIDEWALK, LENGTH "U" SHALL BE 5 FT MINIMUM. FOR TURNING SPACE SURFACE SLOPES AND GRADES SEE NOTE 15.
W = UNLESS OTHERWISE SPECIFIED ON THIS STANDARD PLAN, THE WIDTH OF CURB RAMP "W" SHALL BE 4 FT MINIMUM AT 2% MAXIMUM CROSS SLOPE MEASURED PERPENDICULAR TO THE DIRECTION OF CURB RAMP TRAVEL (SEE NOTE 16).
X = THE "X" LENGTH IS THE FLARED CURB TRANSITION TANGENT OR ARC LENGTH MEASURED ALONG THE BOTTOM FACE OF THE STREET CURB. THE GRADE WITHIN THE FLARED TRANSITION AREAS OF CURB RAMPS SHALL NOT EXCEED 10%. THE X LENGTH SHALL BE WITHIN THE RANGE OF VALUES PER TABLE BELOW, INTERMEDIATE VALUES MAY BE INTERPOLATED.

CH (IN)	"X" MIN (FT-IN)	"X" MAX (FT-IN)
6	5'-0"	5'-10 $\frac{1}{2}$"
6.5	5'-5"	6'-4 $\frac{1}{4}$"
7	5'-10"	6'-10 $\frac{1}{2}$"
7.5	6'-3"	7'-4 $\frac{1}{4}$"
8	6'-8"	7'-10"

* CURB HEIGHT LESS THAN 6 INCHES OR MORE THAN 8 INCHES SHALL BE APPROVED PER NOTE 14.

Y = THE MINIMUM "Y" LENGTH IS 3.5 FEET AND THE MAXIMUM "Y" LENGTH IS 15 FEET. THE "Y" GRADE SHALL BE GREATER THAN 5% AND SHALL NOT EXCEED 8.33% UNLESS OTHERWISE APPROVED PER NOTE 14.

NOTES (CONTINUED)

9. FOR CASES A, B, C, D, E, F AND G, THE ADJACENT GUTTER TRANSITION TO THE CITY STANDARD CURB AND GUTTER SHALL HAVE A MINIMUM LENGTH OF 5 FT STARTING FROM THE EDGE OF THE CURB RAMP WIDTH “W” OR THE "X" LENGTH OF THE FLARE WHICHEVER IS LONGER. FOR CASES H, I AND J, SEE PROJECT PLANS FOR ADJACENT GUTTER AND/OR PAVEMENT TRANSITION LENGTH AND STARTING LOCATION AS APPROVED PER NOTE 14, THE TRANSITION LENGTH FOR CASES H, I AND J SHALL BE 10 FT MINIMUM.

10. FOR EACH CURB RAMP, THE FOLLOWING DESIGN INFORMATION SHALL BE PROVIDED BUT NOT LIMITED TO: CURB RAMP CASE LETTER DESIGNATION, CURB RAMP ALIGNMENT AND CENTERLINE LOCATION REFERENCE, SECTIONS, DETAILS, AND PROFILE, DIMENSION X AS APPLICABLE, DIMENSIONS, CROSS SLOPES AND GRADES FOR Y AND W AS APPLICABLE, CURB HEIGHT, AND ELEVATIONS AT BOTTOM AND TOP OF CURB RAMP AND AT TOP OF FLARE, BCR AND ECR AS APPLICABLE.

11. PULL BOXES, METER BOXES, MAINTENANCE HOLE COVERS, VAULT LIDS, POWER POLES, ETC. ARE NOT PERMITTED WITHIN ANY PART OF CURB RAMPS, INCLUDING FLARED TRANSITIONS AND TURNING SPACES AT THE TOP AND BOTTOM OF CURB RAMPS. WHERE AN EXISTING CURB RAMP IS BEING UPGRADED OR, WHERE AN EXISTING BI-DIRECTIONAL CURB RAMP IS BEING CONVERTED TO STANDARD DUAL UNI-DIRECTIONAL CURB RAMPS, EXISTING BOXES, COVERS, AND LIDS THAT END UP WITHIN THE CURB RAMP FLARED TRANSITION AREAS MAY BE PERMITTED TO REMAIN IN-PLACE, PER NOTE 14. HOWEVER, THEY SHALL BE PRE-APPROVED AND INSTALLED FLUSH ALL AROUND WITH THE ADJACENT SURFACE, AND THEIR SURFACE SHALL HAVE A MINIMUM STATIC COEFFICIENT OF FRICTION OF 0.80 WHEN TESTED PER ASTM C1028. THE USE OF CURB RETURNS IN LIEU OF FLARES SHALL ALSO BE CONSIDERED BY THE APPLICANT.

12. A NON-WALKABLE SURFACE OR BARRIER SHALL BE PROVIDED WHERE EXISTING CATCH BASINS, MAINTENANCE HOLE COVERS, OR ANY OTHER FIXED STRUCTURES DO NOT PERMIT CONSTRUCTING A FLARED CURB TRANSITION FOR A CURB RAMP. THE NON-WALKABLE SURFACE OR BARRIER SHALL BE CONSTRUCTED TO PREVENT PEDESTRIAN TRAVEL ACROSS A RADIAL CURB TRANSITION FOR A CURB RAMP. ALL NON-WALKABLE SURFACES OR BARRIERS INCLUDING BUT NOT LIMITED TO: COBBLES EMBEDDED IN CONCRETE, AN AREA ENCLOSED BY A 6 INCH HIGH MINIMUM CURB HEIGHT, LANDSCAPING, OR ANY OTHER NON-WALKABLE SURFACES OR BARRIERS, SHALL BE APPROVED PER NOTE 14.

13. FOR DISCRETIONARY PROJECTS THAT ENCOMPASS CURB RETURNS REQUIRING PUBLIC WORKS IMPROVEMENTS FROM THE DEPARTMENT OF CITY PLANNING OR COUNCIL OFFICE, PERMITTEE SHALL PROVIDE ADEQUATE DEDICATION OR EASEMENT FOR DESIGNING CURB RAMP CASES A, B, C, D, OR G USING SECTIONS A, C, OR E ONLY. CURB RAMP DESIGNS USING SECTIONS B, D, F, G AND H OR USE OF EXCEPTIONS ALLOWED ON BUREAU OF ENGINEERING SPECIAL ORDERS, ARE NOT PERMITTED.

14. CURB RAMP DESIGN EXCEPTIONS IDENTIFIED IN NOTES 1, 2, 5, 8, 9, 11 AND 12 SHALL BE APPROVED BY THE CITY ENGINEER AND DOCUMENTATIONS RECORDED IN WRITING IN THE CONSTRUCTION DRAWINGS.

15. EXCEPT WHERE NOTE 16 (HEREON BELOW) APPLIES, THE TURNING SPACE SHALL BE A PLANAR SURFACE WITH 2% MAXIMUM SLOPES AND GRADES IN ALL DIRECTIONS.

16. AT MIDBLOCK PEDESTRIAN STREET CROSSINGS, CROSS SLOPES OF UNI-DIRECTIONAL CURB RAMPS, AND ASSOCIATED TURNING SPACES SLOPES AND GRADES THAT ARE PARALLEL TO THE STREET GRADE MAY BE EQUAL TO THE PREVAILING STREET GRADE. AT ALL OTHER PEDESTRIAN STREET CROSSINGS, THAT HAVE NO YIELD OR STOP CONTROLS OR WHERE THERE IS A TRAFFIC SIGNAL THAT IS DESIGNED FOR THE GREEN PHASE (WHERE VEHICLES CAN PROCEED THROUGH THE CROSSING WITHOUT SLOWING OR STOPPING), THE CROSS SLOPES OF UNI-DIRECTIONAL CURB RAMPS, AND ASSOCIATED TURNING SPACES SLOPES AND GRADES THAT ARE PARALLEL TO THE STREET GRADE MAY BE EQUAL TO THE PREVAILING STREET GRADE BUT NOT TO EXCEED 5%. THIS NOTE IS NOT APPLICABLE TO CROSS SLOPES OF BI-DIRECTIONAL CURB RAMPS AND THEIR ASSOCIATED BOTTOM TURNING SPACE SLOPES AND GRADES.

17. FOR CASES E, G, H, I AND J, DRAINAGE CONTROL AND FLOODING SHALL BE ASSUMED TO BE IMPACTED. CONFORM TO REQUIREMENTS LISTED IN "NOTE TO DESIGNER" ON SHEET 7 OF 9.

18. FOR WORK FALLING WITHIN ADJOINING JURISDICTIONS SUCH AS THE CALIFORNIA DEPARTMENT OF TRANSPORTATION (CALTRANS), THE MOST STRINGENT CURB RAMPS STANDARDS REQUIREMENTS SHALL GOVERN.

NOTES

1. ALL WORK SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE LATEST STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION ADOPTED BY THE BOARD OF PUBLIC WORKS AS MODIFIED BY THE CORRESPONDING ISSUE OF THE CITY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS BROWN BOOK.
2. CONCRETE SIDEWALK SHALL HAVE A MINIMUM THICKNESS (t) OF 3 INCHES.
3. MINIMUM 4-INCH UNTREATED BASE MATERIAL SHALL BE INSTALLED UNDER CONCRETE SIDEWALK.
4. EITHER TYPE "A" CONCRETE CURB OR TYPE "C" INTEGRAL CONCRETE CURB AND GUTTER SHALL BE CONSTRUCTED ADJACENT TO ALL SIDEWALKS. SEE THE LATEST VERSION OF STANDARD PLAN S-410 FOR TYPES OF CURBS. IF EXISTING CURB REQUIRES REMOVAL AND REPLACEMENT, RECONSTRUCT CURB TO MATCH EXISTING CURB TYPE. CITY ENGINEER SHALL DETERMINE THE TYPE OF CURB FOR ALL NEW CURB CONSTRUCTION.
5. THE SIDEWALK SHALL HAVE A MINIMUM WIDTH "Q" OF 5 FEET AND BE SLOPED TOWARD THE STREET FLOW LINE. THE MAXIMUM SIDEWALK GRADE INCLUDING THE 1/4-INCH CONSTRUCTION TOLERANCE IS 2 PERCENT. THE MINIMUM SIDEWALK GRADE INCLUDING THE 1/4-INCH CONSTRUCTION TOLERANCE IS 0.5 PERCENT.
6. SIDEWALK WIDTH "Q" OF LESS THAN 5 FEET SHALL REQUIRE APPROVAL BY THE CITY ENGINEER (A MINIMUM 5 BY 5 FEET SQUARE PASSING SPACES SHALL BE REQUIRED AT INTERVALS OF NO GREATER THAN 200 FEET).
7. THE STREET BORDER (W) SHALL BE IN ACCORDANCE WITH DIMENSIONS LISTED ON THE LATEST VERSION OF STANDARD PLAN S-470.
8. AS AN ELEMENT OF THE SIDEWALKS, CURB RAMPS SHALL BE CONSTRUCTED AT ALL STREET CORNERS AND MID-BLOCK CROSSWALKS IN ACCORDANCE WITH THE LATEST VERSION OF STANDARD PLAN S-442, UNLESS CROSSING IS PROHIBITED AT A PARTICULAR LOCATION.
9. THE ESTABLISHMENT OF NEW PARKWAYS SHALL REQUIRE APPROVAL BY THE CITY ENGINEER.
10. RECONSTRUCTION OF SIDEWALKS MAY REQUIRE REMODELING ON PRIVATE PROPERTY TO JOIN CONSTRUCTION OF NEW SIDEWALK TO PRIVATE IMPROVEMENTS.
11. AT LOCATIONS WHERE ANY REQUIREMENTS OF THIS STANDARD PLAN S-444-0 CANNOT BE MET, THE DESIGNER AND/OR CONTRACTOR SHALL REQUEST DIRECTION FROM THE CITY ENGINEER PRIOR TO THE COMPLETION OF DESIGN.

NOTES:

ALL WORK SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE LATEST STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION (SSPWC) ADOPTED BY THE BOARD OF PUBLIC WORKS AS AMENDED BY THE LATEST CORRESPONDING CITY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS BROWN BOOK.

1. STRUCTURAL PIPES SHALL CONFORM TO ASTM A53, GRADE B (F□□35 KSI) AND STRUCTURAL STEEL PLATE SHALL CONFORM TO ASTM A36. PIPE SIZES SHOWN ARE NOMINAL PIPE SIZE (NPS), THE ACTUAL OUTSIDE PIPE DIAMETER IS LARGER THAN THE DESIGNATED NPS.
2. STEEL SHALL BE FABRICATED AND ERECTED IN CONFORMANCE WITH THE LATEST AISC SPECIFICATIONS AND CODE OF STANDARD PRACTICE.
3. WELDING SHALL BE APPROVED E70XX ELECTRODES. WELDING SHALL CONFORM TO APPLICABLE AWS WELDING CODES, LATEST EDITION.
4. ALL STEEL STRUCTURAL COMPONENTS SHALL BE HOT-DIPPED GALVANIZED AFTER FABRICATION.
5. MAXIMUM SPACING OF POSTS SHALL BE 5 FEET ON STRAIGHT ALIGNMENTS AND 4 FEET ON CURVED ALIGNMENTS LESS THAN 30 FEET RADIUS. SPACING SHALL BE UNIFORM BETWEEN CHANGES IN ALIGNMENT.
6. PROVIDE SLIP JOINTS AT STAIRWAY AND RAMP EXPANSION JOINTS OR AT EVERY 24 FEET ON CENTER MAXIMUM.
7. ALL RAILS AND ANY ADJACENT SURFACES TO IT SHALL BE FREE OF ANY SHARP OR ABRASIVE ELEMENTS. EDGES SHALL HAVE A MINIMUM RADIUS OF 1/8 IN.
8. ALL FIELD WELDS AS REQUIRED SHALL BE GROUND SMOOTH. GALVANIZED COATING SHALL BE REPAIRED AFTER FIELD WELDING.
9. 90 DEGREE BEND RADIUS TO THE CENTER OF PIPE SHALL BE WITHIN TWO (2) TO THREE (3) TIMES OF NOMINAL DIAMETER OF THE PIPE.
10. SEE PROJECT PLANS FOR DETAILS OF POST SUPPORTING STRUCTURE.

STANDARD PLAN NO. S-477-2	VAULT INDEX NUMBER **B-4778**	SHEET 2 OF 4 SHEETS

NOTES:

ALL WORK SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE LATEST STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION (SSPWC) "GREENBOOK" ADOPTED BY THE BOARD OF PUBLIC WORKS AS AMENDED BY THE LATEST CORRESPONDING CITY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS "BROWNBOOK".

LIMITS OF REMOVALS, TRENCH WIDTH:

1. ALL PAVEMENT REMOVED SHALL HAVE STRAIGHT EDGES. CUTS SHALL BE MADE TO A MINIMUM DEPTH OF ONE AND A HALF (1-1/2) INCHES. ALL CUTS SHALL BE NEAT, STRAIGHT, VERTICAL CUTS WITH NO BROKEN EDGES.
2. ALL LONGITUDINAL PAVEMENT CUTS SHALL BE UNINTERRUPTED APPROXIMATELY PARALLEL TO THE TRENCH (MAX. 1:6 LONGITUDINAL VARIANCE).
3. IF A SAW CUT IN PAVEMENT FALLS WITHIN 1 FOOT OF AN EXISTING CURB, GUTTER, OR EDGE OF PAVEMENT, THE ADDITIONAL PAVEMENT SHALL BE REMOVED AND RECONSTRUCTED.
4. WHEN SAW CUTTING PAVEMENT, THE MAXIMUM OVERRUN ALLOWED FOR ANY SAW CUT BEYOND THE BOUNDARY REMOVAL LIMITS OF EXISTING PAVEMENT SHALL BE 2 INCHES.
5. TRENCH WIDTH SHALL BE MINIMUM 24 INCHES, UNLESS SLURRY BACKFILL AND BEDDING IS USED, IN WHICH CASE MINIMUM SHALL BE 4 INCHES. MINIMUM 3 INCH SEPARATION SHALL BE MAINTAINED BETWEEN ALL CONDUITS, PIPES, AND TRENCH WALLS. IF SLURRY BEDDING MATERIAL IS USED, 1 INCH IS ACCEPTABLE IN A SINGLE LAYER INSTALLATION, OTHERWISE 2 INCH SEPARATION IS REQUIRED. UNDERCUTTING TRENCH WALLS TO ACQUIRE CLEARANCES IS NOT PERMITTED.

BEDDING:

6. BEDDING MATERIAL SHALL BE PLACED ON FIRM AND UNYIELDING SUBGRADE PER GREENBOOK SECTION 306. SOFT, SPONGY, UNSTABLE, UNSUITABLE MATERIAL SHALL BE REMOVED AND REPLACED.
7. BEDDING SHALL CONFORM TO GREENBOOK REQUIREMENTS AND OTHER APPLICABLE STANDARDS.

BACKFILL:

8. EXCAVATIONS SHALL BE BACKFILLED WITH AN APPROVED SLURRY MIX, CLSM, CMB, OR CAB. NATIVE SOIL MAY ONLY BE USED WITH CITY ENGINEER'S APPROVAL. CMB, CAB, SOIL SHALL BE COMPACTED TO 90% RELATIVE DENSITY. CMB, CAB SHALL BE WELL GRADED AND HANDLED IN A MANNER TO PREVENT SEGREGATION BY PARTICLE SIZE. SOIL TESTING MAY BE REQUIRED TO BE PROVIDED TO THE FIELD INSPECTOR ON A CASE-BY-CASE BASIS.
9. BACKFILL SLURRY MATERIAL SHALL BE PROPERLY CONSOLIDATED. SLURRY MATERIAL FOR TRENCHES DEEPER THAN 5 FEET AND/OR NARROWER THAN 12 INCHES SHALL BE CONSOLIDATED WITH VIBRATION.
10. BACKFILL MATERIAL SHALL BE MADE SMOOTH AND LEVEL BEFORE PLACING BASE AND PAVEMENT.
11. JETTING IS NOT AN APPROVED DENSIFICATION METHOD.

TRENCH SECTION:

12. AFTER THE EXCAVATION HAS BEEN BACKFILLED, THE EXISTING PAVEMENT SHALL BE REMOVED TO A LINE AT LEAST 12-INCHES BACK OF THE FIRM BANKS OF THE TRENCH (“T-CUT”). EXISTING CMB OR CAB BASE MATERIAL IN THIS AREA SHALL BE COMPACTED TO 95% RELATIVE DENSITY AND NEW BASE MATERIALS SHALL BE PROVIDED TO MATCH THE SURROUNDING BASE THICKNESS AS NECESSARY. WHERE NO BASE MATERIAL EXISTS IN THIS AREA, THE NEW BASE MATERIAL SHALL EXTEND BEYOND THE TRENCH WIDTH TO COVER THE ENTIRE TRENCH "T-CUT" AREA.

BUREAU OF ENGINEERING
OFFICIAL RECORD

NOTES: (CONTINUED)

13. NEW BASE MATERIAL OF CMB, OR CAB, SHALL MATCH THE EXISTING BASE THICKNESS, OR 4-INCHES, WHICHEVER IS GREATER AND SHALL BE COMPACTED TO 95% RELATIVE DENSITY. THIS REQUIREMENT SHALL ALSO APPLY OVER SLURRY BACKFILLS UNLESS OTHERWISE APPROVED BY THE ENGINEER. “T-CUT” IS NOT REQUIRED IF AN APPROVED SLURRY MIX BACKFILL IS USED, UNLESS UNDERMINING OF ADJACENT PAVEMENT IS PRESENT. IF SLURRY TRENCH WIDTH IS LESS THAN 12 INCHES, EXISTING PAVEMENT SHALL BE REMOVED TO PROVIDE AT LEAST A 12 INCH WIDE TRENCH SECTION FOR PROPER COMPACTION OF THE BASE MATERIAL.
14. NEW ASPHALT CONCRETE SECTION SHALL MATCH EXISTING PAVEMENT THICKNESS, OR 6 INCHES, WHICHEVER IS GREATER.
15. ASPHALT CONCRETE PAVING WILL OCCUR NO SOONER THAN 42 HOURS AFTER SLURRY BACKFILL OF TRENCH.

GRIND AND RESURFACE SECTION:

WITHIN 30 CALENDAR DAYS AFTER BACKFILLING, ASPHALT CONCRETE SHALL BE COLD MILLED AND RESURFACED AS FOLLOWS:

16. EXISTING ASPHALT CONCRETE SHALL BE GROUND DOWN ONE AND ONE HALF (1-1/2) INCHES, OR ONE HALF THE EXISTING PAVEMENT THICKNESS, WHICHEVER IS LESS, TO THE “T-CAP” LIMITS.
17. WHERE POSSIBLE, “T-CAP” LIMITS SHALL BE FROM FIGURE 1, "EXAMPLES OF GRIND AND RESURFACE “T-CAP” LIMITS". “T-CAP” IS NOT REQUIRED IN STREETS THAT HAVE NOT BEEN RESURFACED WITHIN THE PAST 8 YEARS AND DO NOT IMPACT BIKE LANES.
18. “T-CAP” LIMITS SHALL EXTEND AT LEAST 2 FEET BEYOND THE TRENCH SECTION ("T-CUT" LIMITS). MINIMUM “T-CAP” DIMENSIONS SHALL BE 5 FEET x 5 FEET.
19. “T-CUT” AND CORRESPONDING “T-CAP” (AS APPLICABLE) IS REQUIRED FOR ALL EXCAVATIONS WITH A SURFACE AREA OF 3 SQ. FT OR GREATER.
20. WHERE LIMITS OF "T-CUT"S, "T-CAP"S, POT HOLES OR CORED HOLES ARE WITHIN 4FT OF EACH OTHER, THE PAVEMENT SURFACE RESTORATION SHALL BE COMBINED, BLENDED AND SQUARED USING "T-CAP"S TO ENCOMPASS ALL AREAS IN BETWEEN AS SHOWN IN FIGURE 1. "T-CAP" LIMITS FOR POT HOLES AND CORE HOLES SHALL EXTEND A MINIMUM OF 1-FOOT ALL AROUND BEYOND THE HOLES.
21. IMPACTED BIKE LANES - “T-CAP” LIMITS SHALL FULLY ENCOMPASS ANY BIKE LANE IMPACTED BY THE TRENCH, AND SHALL HAVE A LENGTH THAT EXTENDS AT LEAST 2 FEET BEYOND THE ASPHALT REMOVAL LIMITS IN THE DIRECTION OF BIKE TRAFFIC.
22. WHEN THE “T-CAP” LIMIT IS WITHIN 2 FEET OR LESS FROM A CURB OR GUTTER, THE “T-CAP” LIMIT SHALL EXTEND TO THE CURB OR GUTTER.
23. PAVEMENT SHALL BE LEVEL WITH ADJACENT ROADWAY ELEVATIONS AND SHALL PROVIDE A SMOOTH SURFACE PER GREENBOOK SECTION 302-5 AND SUBJECT TO ACCEPTANCE BY THE CITY PUBLIC WORKS INSPECTOR.
24. "T-CAP" AND PERMANENT BASE PAVING MAY BE PERFORMED ON THE SAME DAY WHEN FEASIBLE.

IDENTIFICATION:

25. EACH RESURFACING SHALL BE IDENTIFIED WITH A METAL IDENTIFICATION TAG IDENTIFYING THE OWNER, AND YEAR OF CONSTRUCTION. IF THE RESURFACING IS MORE THAN 50 FEET IN LENGTH, PLACE THE TAG NEAR EACH END OF THE RESURFACING AND AT INTERVALS NOT TO EXCEED 50 FEET.

NOTES

1. THE WIDTH OF THE TOP OF RAISED CROSSWALKS SHOULD MATCH THE WIDTH OF THE CONNECTING SIDEWALK, SHARED USE PATH, OR DESIRED CROSSWALK, BUT NOT LESS THAN 10' IN WIDTH.

2. BOTTOM EDGE OF RAISED CROSSING APPROACH RAMP TO BE ALIGNED WITH CURB LINE OF INTERSECTING STREET TO MINIMIZE IMPACTS TO SURFACE STORMWATER FLOWLINE.

3. MODIFICATIONS TO EXISTING STREET PAVING, COLD PLANE AND OVERLAY ASPHALT OR COMPLETELY RECONSTRUCT PAVING AS NECESSARY TO RESTORE A SMOOTH TRANSITION AND STREET CROWN (STANDARD PLAN S-433, SIMILAR), MATCH PAVING MATERIALS AND THICKNESS, SEE S-410 FOR STANDARD CURBS & GUTTERS, AND WARP NEW GUTTER TO JOIN INVERT AT INLET.

4. WHERE POSITIVE DRAINAGE CANNOT BE ACHIEVED, INSTALL SIDE-OPENING CATCH BASIN PER STANDARD PLAN S-351, AND CONNECT TO EXISTING STORMWATER CONVEYANCE SYSTEM.

5. A RAISED CROSSING SET BACK FROM THE MAIN STREET MAY CREATE A NEW LOW POINT IN FRONT OF THE RAISED CROSSING. DRAINAGE AND CATCH BASIN PLACEMENT WILL NEED TO BE CONSIDERED.

6. PLACE CROSSWALK 2' (MIN) FROM POLES, HYDRANTS, OR OTHER VERTICAL OBSTRUCTIONS.

7. THE CASE C SECTION (SEE SHEET 5) IS APPROPRIATE ON ROADWAYS WITH PARKING. THE RAISED CROSSING SHOULD REACH FULL HEIGHT OUTSIDE OF ACTIVE TRAVEL LANES. THE CASE 3 SECTION MAY NOT BE APPROPRIATE ON ABNORMALLY CROWNED ROADWAYS, WHERE THE CROSS SLOPE EXCEEDS 3.3%.

8. FOR STOP CONTROLLED SIDE STREET, THE MAXIMUM CHANGE IN GRADE IS 8%. FOR UNCONTROLLED OR SIGNALIZED INTERSECTIONS, OR FOR MID-BLOCK LOCATIONS, THE MAXIMUM CHANGE IN GRADE IS 5%.

9. CROSSWALK CROSS SLOPES SHOULD BE NO GREATER THAN 2%, HOWEVER, AT LOCATIONS WITHOUT STOP CONTROL THE CROSS SLOPES MAY BE 5% MAX. AND AT MIDBLOCK LOCATIONS THE CROSS SLOPE MAY MATCH THE EXISTING STREET GRADE.

SHEET 1 OF 50 SHEETS

PART 1
TERMS AND DEFINITIONS

SECTION 1
TERMS AND DEFINITIONS

1-1.1 Terms.

In this standard plan and other referenced standards:

(a) Unless otherwise stated, the words, "directed," "required," "permitted," "ordered," "instructed," "designated," "considered necessary," "prescribed," "approved," "acceptable," "satisfactory," or words of like meaning, refer to, expressions, and prerogatives of the City.

(b) The word "shall" is used to describe specific conditions. To clarify the meaning intended by this word "shall", the following definitions apply:

Shall: A mandatory condition. Where certain requirements are described with the "shall" stipulation, the requirements are mandatory. The City Engineer can approve exceptions to these conditions on a case by case bases.

(c) "Standard Plans" shall mean the City of Los Angeles, Department of Public Works, Bureau of Engineering standard plans and applicable American Public Works Association's Standard Plans For Public Works Construction (SPPWC) adopted by the City.

1-1.2 Definitions.

In this standard plan and other referenced standards:

(a) **APPLICANT - See Permittee.**

(b) **BASE** - The lowest section with floor or slab for closing the bottom opening of a handhole. Base shall be designed for the bearing pressure.

(c) **PERMIT ENGINEER** - Representative of the City Engineer who enforces the municipal code requirements as described herein by issuing various types of construction and Product Approval permits.

(d) **BOX** - Main section or the upper section of handhole consisting of vertical walls supporting the top slab when multiple sections are used. Other sections that are added to the center of the handhole are referred as extensions.

(e) **CONTRACTOR** - The individual, partnership, corporation, joint venture, or other legal entity having a contract or permit with the City that allows them to perform work

in the public right of way. The Contractor may perform work for an individual permittee.

(f) **COVER AND FRAME** - Cover and its supporting frame (also referred to as "ring") are used to close an access or top opening to the box or maintenance hole.

(g) **EXTENSION** - Intermediate or center section that may be used to increase depth of a handhole.

(h) **HANDHOLE** - Complete box and frame and cover, extension and base if provided, used at grade level and/or below-grade. Includes pull boxes, enclosure, vaults and similar installations.

(i) **MAINTENANCE HOLE** - Precast structure that typically consists of frame and cover that may be set in a concrete curb or collar, grade (adjustment) rings, cone or taper top section (or sometimes referred as "vault neck"), riser sections; and to provide access from existing pavement to below-grade handhole or structure.

(j) **MANUFACTURER** - The individual, partnership, corporation, joint venture, or their legal entity that manufactures the product and material in a plant.

(k) **PAVER** - Any stone, brick or tile unit suitable for sidewalk surfaces, and driveway if permitted by City Engineer.

(l) **PERMANENT DEFLECTION** - The difference between the deflection at the start of proof loading testing (after preload) and the end of testing (at end of 10 cycles).

(m) **PERMITTEE** - A permit applicant who can be a person, a contractor, local utility company or a manufacturer seeking the approval of the testing and analysis by the City of Los Angeles, Department of Public Works (DPW) of any material, product, service, process or technology used in construction of curb, sidewalk, gutter, driveway, approach, roadway surface, pavement, sanitary sewer, sewer work, storm drain, culvert, stairway, retaining wall or any similar structure over the City's right of way in accordance with Los Angeles Municipal Code Sections 62.105 and 62.105.6.

(n) **PULL BOX** - A non-person entry handhole commonly used in conjunction with street light and traffic signal systems, water meters, irrigation controls and valves within the pedestrian way. See Handhole.

(o) **TOP SLAB** - The upper horizontal portion of the box.

(p) **TREE WELL COVERING** - The cover or grate that is placed over a tree well with or without frame.

(q) **ZERO LOAD DEFLECTION READINGS** - The difference between the deflection readings before preload and after preload.

(r) **VAULT** - A person-entry handhole. Also see Handhole.

L.A.C.E.
INDEX

PART 2
GENERAL REQUIREMENTS

SECTION 1
SCOPE

2-1.1 General.

This standard plan covers the design criteria, the testing and the approval requirements for the materials and products placed in the public right-of-way. The testing and approvals are required by Los Angeles City Municipal Code Section 62.105 and the testing and approval responsibilities have been delegated to the City Engineer under Section 62.105.6 of the code. Many of the testing and approvals are also required by the Greenbook and its supplements, and the Brown Book used as the specifications for the works constructed in the public right-of-way. The materials and products approved under this standard plan shall be utilized in all Bureau of Engineering (BOE) projects. (Note: Any installation over the below-grade building or basement located under the sidewalk area or the public right of way shall also conform with the building code requirements and shall be approved by Los Angeles City Department of Building and Safety.)

(a) Portions of this standard plan were extracted from the Western Underground Committee's "Recommended Guide No. 3.6, Non-concrete Handholes." References shall also be made to ANSI/SCTE 77 2007 Specification for Underground Enclosure Integrity, Standard Specifications for Highway Bridges (17th Edition) of American Association of State Highway and Transportation Officials (AASHTO), and Bureau of Engineering (BOE) Structural Design Manual Part H. It shall be the permittee's responsibilities that the materials and products are also in conformance with other applicable standards or code requirements.

(b) The brick, concrete or other decorative pavers and their requirements specified herein or as listed in the Citywide-Use approval lists do not intend to replace the standard concrete sidewalk pavement as required in the City of Los Angeles or to replace the existing standard installation details or other standard plan requirements for concrete sidewalk. The brick, concrete or other decorative pavers shall not be allowed in existing improved local street or residential area. The brick, concrete or other decorative pavers may be allowed in non-local street or commercial area or new driveway apron in unimproved local street or residential area at the discretion of the

L.A.C.E.
INDEX

City Engineer. The information provided herein shall be used as reference information only and as a guide to review the materials and products submitted in accordance with the municipal code. All materials and products must be reviewed, tested and approved by the City Engineer and other applicable governing City departments.

2-1.2 Types of Approvals and Usages.

(a) The City grants the following types of approvals:
Approval for use at a specific location in conjunction with a specific project and a Citywide-Use approval that pre-approves and pre-qualifies the materials and products to be used at any location within the City if the project location meets the conditions of the approval, the applicable code, law and regulation. The permittee for the Citywide-Use approval must be the manufacturer or their authorized representative.

(b) Types of Usage. This standard plan includes materials and products for the following usages:
(1) Those suitable for installation in sidewalks, parkways, and other pedestrian traffic areas.
(2) Those suitable for installation in streets, alleys, driveways and other vehicular traffic areas.

(c) The final approvals of the use of the Citywide-Use approved materials and products to be installed under the required permits shall be made by BOE permit engineer and other applicable governing City departments. Uses of the approved materials or products shall not release the permittee of the responsibilities to provide design and/or obtain structural calculations to verify for their proper use under the project site conditions, to verify for the availabilities of the materials or products, and to obtain the approvals of the installations from the BOE permit engineer and other applicable City departments.

2-1.3 Types of Materials and Products.

The materials and products covered by this standard plan consist of the following:

(a) All handholes, precast maintenance holes and similar installations.

(b) Covers with or without frames. (It is noted that only covers and frames that conforms to the applicable standard plans can be used for City sewer or storm drain maintenance holes.)

(c) Trench plates, tree well coverings, vent grates and other similar installations.

(d) Detectable warning surface.

L.A.C.E. INDEX

(e) Brick, concrete or other decorative pavers.

This standard plan does not include the testing requirements or the criteria for sanitary sewer or storm drain materials or products. Refer to Greenbook and Brown Book for the acceptance criteria for the sanitary sewer or storm drain products.
(See http://eng.lacity.org/techdocs/product_material/Product_materials.htm.)

2-1.4 Approved Material and Product List(s).

The City Engineer will maintain and issue current list(s) of Citywide-Use approved handholes, covers and frames, tree well coverings, vent grates, trench plates, brick, concrete or other decorative pavers, and other similar installation. The list(s) will indicate the name of the manufacturer, the limits of the approved use, the material each product consists of, the manufacturer's model number or other identifying designation, and the expiration date of the approval. The list(s) of approved products for Citywide-Use can be found on the Technical Document Center of the BOE website.
(See http://eng.lacity.org/techdocs/products/index.cfm.)

2-1.4.1 Duration of Approvals.

The duration of approvals, from the date of the approval letter, for the materials and products included in this standard plan, are as follows:

	Type of Product	Duration of Approval
(a)	Handholes, precast maintenance holes, covers and frames, and similar structures or installations	2 years*
(b)	Trench plates, tree well coverings and grates, catch basin gratings and similar installations	4 years
(c)	Brick, concrete or other decorative pavers	4 years
(d)	Detectable warning surface	4 years
(e)	Other materials and products not included above	2 years

The manufacturer shall certify in writing to the City Engineer 60 days before the expiration date that no change of ownership or manufacturing plant has been made and the product is made of the same material and other approved components. If the manufacturer fails to provide the certification, the City Engineer will remove the product from the approved list and the approval shall be deemed to have expired. The City Engineer has the right to temporarily or permanently suspend any approval when the materials or the

L.A.C.E.
INDEX

products are discovered or detected with flaws or deflects during manufacturing or construction which may cause harm to the public. Any change of the governing code requirements, referenced standards or any part of this standard plan that are affecting the approval and testing requirements shall deem the existing approval has been obsolete and the manufacturer shall be notified and to resubmit for new approval to the new requirements.

(* Maximum total duration of the approval with extensions is eight years provided there is no change of the materials and product fabrication, governing code, referenced standards or any part of this standard plan. The manufacturer shall provide written certification every two years as described above. The manufacturer shall provide new submittals with material and product information, fabrication and/or engineering drawings as described herein for review at the end of eight years. The manufacturer shall provide additional testing as required by the City Engineer when deemed necessary.)

2-1.5 Application and Approval Process.

The permittee shall submit a request for approval of the material or product for use in the City's public right of way and provide all necessary testing and/or structural calculations in accordance with the Public Works Products Approval Procedures published in Technical Document Center of the BOE website.
(See http://eng.lacity.org/techdocs/product_material/Product_materials.htm.)

In accordance with the published Public Works Products Approval Procedures, three main processes are available for determining the acceptability of a material or product. They consist of the following:

(a) Submission of laboratory test results that are performed at the City's approved laboratory with the testing analysis that demonstrates the material or product meets or exceeds the strengths and the physical characteristics specified in this standard plan. (Note: Handholes, precast maintenance holes and similar structures or installations that exceed 48 inches in any size shall be submitted with the structural calculations as described below in lieu of the structural loading test. All covers and frames shall be performed with structural loading tests with the exception as indicated in 2-2.3.1(b).)

(b) Submission of drawings and calculations that demonstrates the product meets or exceeds the structural loadings specified in this standard plan. The drawings and calculations shall be prepared by a Civil or a Structural Engineer licensed in the State of California.

(c) A combination of both submissions described above. In addition to the structural drawings and calculations, other evaluation of the physical characteristics of the product

L.A.C.E.
INDEX

performed by laboratory tests may be required.

SECTION 2
STRUCTURAL DESIGN

2-2.1 General.

When the materials or products are placed in the public right of way or utilized in BOE projects are subjected to vehicular and/or pedestrian loadings, they shall demonstrate in the approval process that they are designed, fabricated and installed to meet these loading requirements. When the permittee submits structural drawings and calculations as part of approval process specified in 2-1.5, the structural drawings and calculations shall conform to the following, but not necessarily limited to:

(a) Unless otherwise specified, allowable deflections and stresses or structural capacity shall be computed in accordance with the Standard Specifications for Highway Bridges (17th edition) of AASHTO. For materials or products made of reinforced concrete, long term deflection resulting from creep and shrinkage with time-dependent factor for the sustained loads shall be computed with the safety factor of 2.0. For materials or products made of structural steel, allowable stress shall be computed by considering the effects of repeated loading with loading condition of four as specified in Manual of Steel Construction published by American Institute of Steel Construction (AISC).

(b) When future street widening or other modification which might affect the loading on any of this material or product or structure is planned, that material or product or structure shall be designed to accommodate the future loading.

2-2.2 Structural Loadings.

The structural loadings shall be the most stringent combination of the applicable live and dead loads applied vertically and laterally.

2-2.2.1 Live Loads.

The live loads can be from vehicular load or pedestrian load depending on the location the material or product is used. The following live loads shall be used:

(a) Live Loads-Vertical.

Structure Location	Vertical Live Load
(1) Roadways, Alleys or Driveways (Existing or Future).	H20 - wheel loading including Impact.

L.A.C.E. INDEX

For effect of impact:
0 to 12 inches below ground, increase live load by 30%
13 to 24 inches below ground, increase live load by 20%
25 to 35 inches below ground, increase live load by 10%
36 inches or more below ground, no increase.

(2) Parkway/Sidewalk — 300 psf (see Section 56.09 of Los Angeles Municipal Code)

(b) Live Loads-Lateral.

(1) Lateral live loads shall be those to which the structure is exposed to. When walls are located closer than ½ of the wall height from the nearest wheel load, a wheel load surcharge of two feet shall be assumed to approximate the effects of lateral live loadings.

(2) Any structure containing wall height of less than two feet can be installed in any sidewalk and parkway, with the exception of driveway, without considering wheel load surcharge.

2-2.2.2 Dead Loads.

The following dead loads shall be used:

(a) Dead Loads-Vertical.

(1) Minimum unit weight of the earth cover shall be taken as 120 pcf.

(2) Actual weights of concrete, access cover, grade rings, riser sections, appurtenances and stored contents shall be used.

(b) Dead Loads-Lateral.

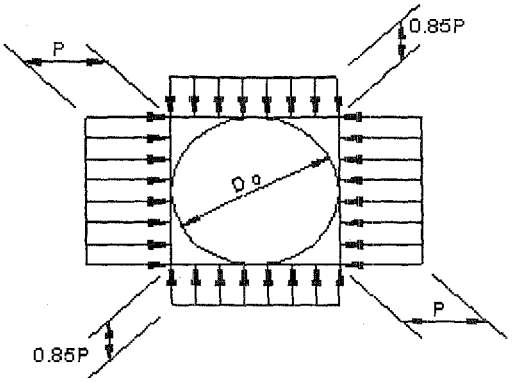
(1) Horizontal soil pressure from the earth backfill below ground level and hydrostatic pressure developed from the ground water.

(2) For earth surface, above ground level, containing slope greater than 5:1, two feet of earth surcharge shall be assumed.

(3) Minimum equivalent fluid pressure of 36 pcf shall be used to determine the soil pressure and earth surcharge. Where saturated earth or high groundwater is anticipated, equivalent fluid pressure of 80 pcf shall be used.

(4) Cylindrical Structures. The lateral loads on cylindrical structures shall be unbalanced with the loads as shown below:

L.A.C.E.
INDEX



Where:

P= The lateral loads from horizontal soil pressure and the earth surcharge, and/or hydrostatic pressure described above.

D_o= The outside diameter of the structure.

The coefficients for moments and thrust calculations shall be from recognized and accepted theories.

2-2.2.2 Soil Bearing Pressure.

Any handhole, precast maintenance hole, metal frame and similar structure or installation without a bottom, a floor slab, or a solid support shall be submitted with structural calculations indicating the resultant soil pressures due to the structural loadings do not exceed 1,000 psf.

2-2.2.3 Allowable Deflection by Structural Calculations.

The computed deflection by the structural calculations submitted for the approval shall not exceed the allowable deflection as described in 2-2.3.3.

2-2.3 Structural Loading Test.

2-2.3.1 General.

(a) In addition to other property and performance testing specified in this standard plan, all materials and products including those that are located below-grade, or at grade level and spanned over an opening shall be designed and tested to withstand the live and/or dead loads listed above. If the material or product is submitted for approval with the required testing as a part of the approval process, written descriptions of the structural loadings, the testing methods and the procedures shall be included along with the manufacture drawings

required herein.

(b) Structural loading test shall be applied to handholes, precast maintenance holes, and similar structures or installations, and all covers and frames used over these structures and installations with the following conditions and other requirements specified herein.

(1) For handholes, precast maintenance holes and similar structures or installations that contain any wall dimension greater than 48 inches, structural calculations are required to be submitted for approval in addition to impact load test specified herein.

(2) Structural loading test shall be applied to all covers and frames used over the handholes, precast maintenance holes, or similar structures except for covers and frames that are made of steel or reinforced concrete. For covers and frames that are made of steel or reinforced concrete, the permittee shall have the option to submit for the structural loading test or structural calculations for approval.

(3) For handholes, precast maintenance holes and similar structures or installations that contain open bottom (without any bottom or floor slab), additional structural calculations shall be required to demonstrate that the maximum allowable pressure is not exceeded.

(4) The City Engineer may require structural loading test if the product has an unusual configuration or is manufactured of material other than steel or reinforced concrete.

(c) Materials made of iron castings shall require structural loading test, as specified in the Greenbook including the supplements, the Brown Book, and in this and other applicable standard plans. No structural calculation shall be used as substitution.

2-2.3.2 Structural Loading and Deflection Tests.

(a) Structural load testing on handholes, precast maintenance holes, covers and frames, and tree well coverings, shall be done in a standard laboratory atmosphere with the approved testing procedures. The testing laboratory shall certify that the handholes, precast maintenance holes, covers and frames, and tree well coverings tested are within the dimensions and manufacturing tolerances shown on the manufacturing drawings.

(1) All handholes, precast maintenance holes, and similar structures or installations shall be tested with the appropriate top sections, covers and frames in place and supported as they would be in the field.

(b) Covers and Frames, Tree well Coverings, Vent Grates and Frames. Unless otherwise specified, all covers and grates described in this standard plan shall be tested with the appropriate frames in place and supported. For covers without any frame or support information submitted for testing or approval, structural loading test shall be applied to the covers with two shortest sides supported.

(1) All sewer and storm drain maintenance hole covers and frames used by City of Los Angeles shall be tested to proof loads established in the related standard plans. All other maintenance hole covers and frames utilized by other utility companies shall also be tested to structural loading as specified in this standard plan.

(c) The structural loadings for the testing can be the combination of the live loads (either the vehicular traffic loading or the pedestrian traffic loading), the dead loads and applicable impact loads and wheel load surcharge. The structural loadings in the vehicular traffic and pedestrian traffic areas shall be increased by a factor of safety of 2.5 and 2.0, respectively, for the testing. For material or product that is applicable in both traffic areas, the most stringent structural loading with the designated factor of safety shall be used. When the structural loadings are applied, they shall be distributed or loaded with preload and proof load at the applicable positions as specified in this standard plan without any failure, crack, damage, permanent deformation or exceeded deflection. If multiple loading positions apply, the applicant shall furnish minimum one specimen for each loading position.

(1) Preload. The preload shall be 5% of the proof load and shall be applied for a duration of one minute $\pm$ 15 seconds, unloading for one minute $\pm$15 seconds and waiting one minute $\pm$ 15 seconds at zero load before proceeding with the test.

(2) Proof Load. Uniform proof load or equivalent concentrated load (ECL) for one minute and shall be repeated 10 times with the corresponding deflection recorded, without failure, cracks or permanent deformation. After the inspection, the specimen shall then be loaded to failure with ultimate proof load and deflection recorded if directed by the City Engineer.

(3) Uniform Proof Load. Loading determined in 2-2.2 or specified in this and other applicable standard plans.

(4) Equivalent Concentrated Proof Load. An equivalent concentrated proof load shall be equal to the uniform proof load described above and can be used instead of the uniform proof load.

i. Unless otherwise specified, the equivalent concentrated proof load applied vertically shall be applied to a 9" x 9" x 1" thick steel bearing plate over a 9" x 9" x ½" thick piece of rubber, with a Shore A Hardness of 80, in the applicable locations of the tested surfaces on the Figures as shown herein. For material or product composed of concrete or other non-concrete or non-metal materials, the size of steel bearing plate and rubber shall be 10" x 10" x 1" and 10" x 10" x ½" thick, respectively. For any handhole or similar structure or installation which has

L.A.C.E.
INDEX

a top surface area smaller than the area of 9" x 9" or 10" x 10", whichever is applicable, a steel bearing plate and rubber which have the equivalent amounts of surface areas may be used.

ii. For vertical (sidewall) loading location, the load shall be distributed over a 4 ½" x 9" x 1" thick or 5" x10" x1" thick steel bearing plate, whichever is applicable, and rubber with appropriate thickness specified herein.

iii. For lateral sidewall loading tests, the load shall be distributed and applied to the top surface of the structure or installation on the longest wall. The load shall be transmitted a flat and rigid plate, 18" x 24", at the center of the wall.

(5) During the structural loading tests, a vertical brace may be used across from the load plate if required for stability.

(6) Loading Locations. Unless otherwise specified, equivalent concentrated loads shall be applied to the locations indicated on the following figures where applicable:

STANDARD PLAN S-601-3	B-4608	SHEET 15 OF 50

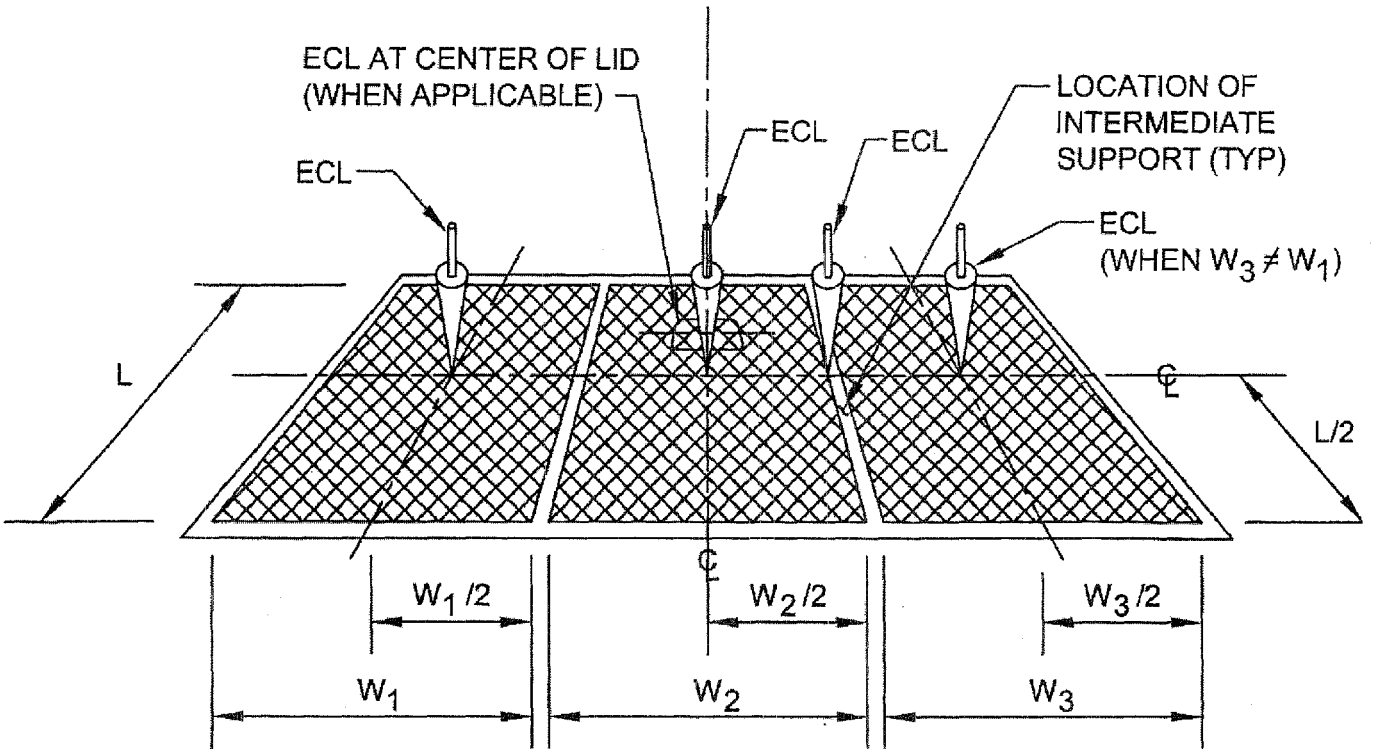

FIGURE 8

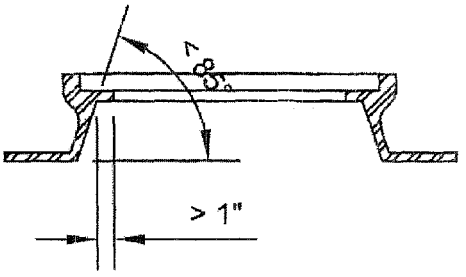

FIGURE 9

Notes for Figure 1 through Figure 9:

(1) The handholes, frames and intermediate supports may not be completely shown on all the figures. All structural loading and deflection tests shall be in accordance with 2-2.3.2.

(2) Unless otherwise specified, all lids shall be applied with structural loading and deflection tests in addition to other testing locations as indicated. If the center of the lid to the center of the cover is less than the size of the bearing plate, nine or ten inches, whichever is applicable, the structural loading and deflection tests to the center of the lid shall be exempted.

(3) For all handholes and similar structures which are equal to or less than 48 inches in

L.A.C.E.
INDEX

length, their applicable covers and frames shall be applied with additional vertical (sidewall) loading test at similar location as indicated in Figure 1(b).

(4) For multiple solid covers similar to those as shown in Figure 8, the covers, frames, access lid and the intermediate cover supports shall be applied with structural loading and deflection tests at loading locations as indicated. For pedestrian traffic areas, the loading at the intermediate cover support shall be determined by considering the pedestrian load over the tributary areas of the adjacent covers. If the size of the cover section No. 3 as shown in Figure 8 is the same as cover section No. 1, the structural loading and deflection tests on cover section No. 3 shall be exempted.

(5) If any part of interior wall of the maintenance hole cover and frame with a inclined plane and an angle from the base less than 85 degrees, or if the ring seat, where cover rests, is projected beyond the vertical plane of the frame by more than one inch as shown in Figure 9, the maintenance hole cover and frame shall be applied with additional vertical (sidewall) loading tests at similar location as indicated in Figure 3(b). There shall not be any bending stresses within the frame wall caused by the vertical live and/or dead loads through the cover. Unless otherwise specified, no resultant live and/or dead load shall be within the kern (middle 1/3) of the base of the maintenance hole frame.

(6) For materials or products which have different configurations than the figures as shown herein, the City Engineer shall determine the appropriate structural loading and deflection tests and the loading locations.

(c) Vehicular Traffic Loading-Vertical.

(1) General. All handholes, precast maintenance holes, and similar structures or installations that are constructed at grade level and within the area subject to vehicular traffic including the driveway area as specified in 2-2.1 and within the distance and the dimensions as specified in 2-2.2.1(b)(1) and 2-2.3.1(b), respectively, shall be tested for vehicular traffic loading. Handholes, precast maintenance holes, and similar structures or installations that are constructed for below-grade use shall be tested based on the most stringent structural loadings as determined in 2-2.2 and herein. All the covers and frames that are constructed over these structures conforming with the conditions as specified in 2-2.3.1(b) shall be tested for the vehicular traffic loading.

(2) Iron castings shall be manufactured, identified and tested in accordance with the testing method specified in the latest adopted edition of the Greenbook including the supplements, the Brown Book and in applicable standard plans as defined in 2-2.3.2.

(d) Vehicular Traffic Loading-Lateral.

(1) For handholes, precast maintenance holes and similar structures or installations that are constructed at grade level and within the distance and the dimensions as specified in 2-2.2.1(b)(1) and 2-2.3.1(b), respectively, and is subject to structural loading test with a minimum lateral (sidewall) structural loading of 400 psf shall be applied. For handholes, precast maintenance holes and similar structures or installations that are constructed below-grade, the most stringent lateral (sidewall) structural loadings as determined in 2-2.2 shall be used. For top surfaces of handholes, precast maintenance holes and similar structures or installations that are less than eight feet below the grade surfaces, the lateral (sidewall) structural loadings shall not be less than 400 psf.

(2) The load shall be applied parallel to the top surface of the structure centered on the sidewall with the longest dimension. The load shall be applied to a flat, steel plate one inch thick, 18 inches x 24 inches wide at the center of the wall. The steel plate shall bear against any suitable medium (such as sand) that will conform to the shape and surface angle of the structure sidewall to achieve a uniform loading.

(e) Pedestrian Traffic Loading (Vertical).

(1) General. Top section of the handholes, precast maintenance holes and similar installations, covers and frames, tree well coverings, vent grates and frames, and other similar installation that are located at grade level within the sidewalks and the parkways, excluding the driveways, subject to pedestrian traffic loading shall be tested through the preload load and proof load. Handholes, precast maintenance holes and similar installations that are constructed for below-grade use shall be tested based on the most stringent structural loadings as determined in 2-2.2 and herein.

i. Uniform Proof Load. An uniform proof load of 600 psf which is equivalent to 300 psf (per Section 56.09 of Los Angeles Municipal code) times a factor of safety of 2.0 shall be applied on the surface area of the top section of the handholes, precast maintenance holes, covers, tree well coverings, vent grates and frames and other similar installations.

ii. Equivalent Concentrated Proof Load. An equivalent concentrated proof load equal to the 600 psf uniform proof load described above may be used instead of the uniform proof load. The equivalent concentrated proof load shall be calculated based on the examples shown in this standard plan.

iii. Example 1-For handholes or precast maintenance hole covers and frames constructed at grade level, 30" wide x 48" long with pedestrian traffic loading. Using Figures 1(a), (b) and (c) of 2-2.3.2(b)(6):

Equivalent Concentrated Load (ECL) at Load Locations 1 and 3 (Figure 1(a) and (c), respectively).
Proof load=(W x L) x uniform load 600 psf=(2 ½' x 4') x 600 psf=6,000 lbs.

ECL at Load Location 2 (Figure 1 (b) - Vertical (Sidewall) location.
Proof load=(W x L) x uniform load 600 psf=(2 ½' x 4')/2 x 600 psf=3,000 lbs.

iv. Example 2-For tree well covers, 4' x 4' with 16 inches center square opening (Note: Dimensions shown for tree well covers represent two-two feet half covers with two feet in length), constructed at grade level with 600 psf pedestrian traffic loading. Using Figures 4(a) and 4(b) of 2-2.3.2(b):

ECL At Load Location 1(Figure 4(a)).
Proof load=(a x W) x 600 psf=(1.33' x 4') x 600 psf =3,200 lbs.

ECL At Load Location 2 (Figure 4(b)).
Proof load=(b/2 x c) x 600 psf=(0.67' x 1.33') x 600 psf =535 lbs.

v. Example 3-For handhole with three equal sectional steel covers with a combined dimension of 4' x 6' constructed at grade level with 600 psf pedestrian traffic loading. Using Figure 8 of 2-2.3.2(b):

ECL at Load Location 1 and 2. (ECL at Load Location 3 is exempted.)
Proof load=[(W1 x L) or (W2 x L)] x 600 psf=(2' x 4') x 600 psf=4,800 lbs.

(f) Pedestrian Traffic Loading (Lateral) for the Sidewalls of Handholes, Precast Maintenance Holes and Similar Structures or Installations.

(1) The sidewalls of the handholes, precast maintenance holes and similar structures or installations shall be subject to a uniform load equivalent to the horizontal soil pressure and/or surcharge inserted on the structure.

i. For any structure, constructed at grade level, with an overall height of 18 inches and less and without any structural calculations submitted; a minimum uniform load of 100 psf shall be applied over a sidewall of the structure which shall be uniformly supported on the opposite side. For any structure constructed below-grade, the most stringent lateral (sidewall) structural loadings as determined in 2-2.2 shall be used.

No lateral (sidewall) structural loading to below-grade structure shall be less than 100 psf.

ii. The load shall be applied in accordance with 2-2.3.2(d).

2-2.3.3 Deflection.

A deflection measuring device shall be positioned to measure the relative deflection between the testing machine table and the specimen. All deflection readings shall be recorded during the preload, and the loading and unloading of each cycle at a minimum of three increments for proof load less than 10,000 lbs, or at 5,000 lbs intervals for proof load equal to or exceeding 10,000 lbs. If the compressible medium is used for a reaction base, its deflection shall be measured and subtracted from the total to determine the deflection.

(a) Vertical Deflection.

(1) For handholes, precast maintenance holes, covers and frames, a deflection measuring device shall be positioned so as to measure only the deflection of the top portion of the specimen after preload and the end of 10 cycles of proof load.

(2) For sidewall (vertical) loading, a deflection measuring device shall be positioned to indicate the deflection of the sidewall of the specimen or the wall of maintenance hole frame, whichever is applicable.

(b) Lateral Deflection. A deflection measuring device shall be positioned to indicate lateral deflection wherever maximum deflection occurs after the preload and the end of 10 cycles of proof load.

(c) Allowable Deflection. Maximum deflection due to, vehicular or pedestrian traffic loadings, and any other proof loading specified in other standard plans shall be as follows.

(1) Vertical.

i. Handholes, Precast Maintenance Holes, and Similar Structures or Installations. For top slab or section made of any concrete with reinforcing steels or other non-metal materials, maximum deflection in any loading cycle shall not exceed 1/8 inch.

ii. Covers and Frames, Tree well Coverings. For steel or cast iron covers and frames, maximum deflection shall not exceed ½ inch. For concrete and non-metal material, deflection shall not exceed 1/8 inch.

(2) Lateral.

i. Handholes, Precast Maintenance Holes, and Similar Structures and Installations. Sidewall deflection shall not exceed 1/4 inch per foot of length of the sidewall.

(3) No permanent deflection due to vertical or lateral loading shall exceed 10% of the

deflection measured at the applicable proof load or the maximum allowable deflection value as specified herein, whichever is lesser.

L.A.C.E.
INDEX

PART 3

PHYSICAL PROPERTIES AND CONDITIONS, STRUCTURAL STRENGTHS AND PERFORMANCE CHARACTERISTICS

SECTION 1
GENERAL REQUIREMENTS

3-1.1 General.

(a) Not all materials and products listed in same categories or have similar installations are subject to same requirements. The materials and products shall conform to the physical properties and conditions, structural strengths and performance characteristics specified in this standard plan, the Greenbook and its supplements, and the referenced industry and testing standards. If there is any conflict, the most stringent requirements shall be applied.

(b) Other tests that would be conducted in an identical manner for both control and test specimens for each property sought can be considered by the City Engineer.

3-1.2 Physical Properties and Conditions.

3-1.2.1 General Standards and Requirements.

(a) All materials and products shall be new. Unless approved by the City Engineer, no product shall be made of used or scrap parts.

(b) All material and products shall have consistent dimension, thickness and color and within the allowable manufacturing tolerance specified in the submittal or referenced standards.

(c) Unless otherwise specified, all materials and products shall be designed for use through an ambient temperature range of -18 °C (0 °F) to 66 °C (150 °F) or tested in accordance with the environmental conditions specified herein.

(d) All materials and products including, but not necessarily limited to, the mortar or the grout, anchor, fastener, adhesive, caulking and/or sealant shall have resistance to corrosion, ultraviolet light, chemical exposure, growth of fungus or mildew and other environmental conditions specified herein. All cementitious materials shall be free of any efflorescence.

(e) All testing samples or specimens shall be taken from the finished materials or final products, that are produced under the same heat or lot, randomly selected and tagged by

the City Engineer from the manufacturing plant or local supplier's distribution yard.

(f) No installation shall result in any difference in level with adjacent improvement in pedestrian traffic area exceeding 1/8 inch. No installation shall result in any ponding or interruption of surface flow.

(g) Unless otherwise specified, all materials or products constructed at grade shall be tested for abrasion and slip resistance with minimum values specified. Unless otherwise directed by the City Engineer, all materials or products made of only concrete or cementitious materials with broom finish shall be exempted. The broom finish must be specified on the approved submittal and/or installation details. All non-concrete materials or products constructed shall be tested.

(1) Initial Slip Resistance Tests: Three sets of specimens, with sizes cut to fit the Gardner Abrasion apparatus for the abrasion resistance test and mechanically held together to form the specimens for the slip resistance test, shall have average static coefficient of friction not less than 0.6 when tested per ASTM C 1028 for uses in pedestrian traffic area and average dynamic coefficient of friction of 0.35 when tested per Calif Test Method No. 342 for uses in vehicular traffic area. For materials or products allowed to be installed in sloped or inclined pedestrian traffic area including the curb ramp area and other area containing slope exceeded 2%, the average static coefficient of friction shall not be less than 0.8. No more than one individual specimen shall have coefficient of friction less than the values specified above. It is noted that the sizes of the specimens to be tested for coefficient of friction, ASTM C 1028 and Calif Test Method No. 342 are different.

(2) Initial Abrasion Resistance: After Initial Slip Resistance test described above, test for Initial Abrasion Resistance with average wear (loss) not to exceed the values as specified in this Standard Plan when tested by ASTM C 418 or modified ASTM D 2486. When tested per ASTM D 2486, the specimens with sizes cut to fit the Gardner abrasion apparatus with abrasive medium (Norton metallic 40 grit sand paper) fixed to the sled and wood block with combined mass of 3.2 lbs and with reciprocating linear motion of 37$\pm$ cycles per minute over a 10 inches travel of 1,000 cycles. One cycle shall consist of one complete forward and backward motion. Unless otherwise specified, measurements shall be taken on the top surface. Forced air or other approved mean shall be used to clean the sand paper and area to be scrubbed before and during testing. Cleaning and inspection of sand paper shall be performed as frequent as necessary or no less than once every 250 cycles.

(3) Long Term Abrasion and Slip Resistance Tests: Three sets of the specimens from the Initial Abrasion test shall be used to continue for the long term abrasion and slip

resistance tests. Each specimen shall be subject to abrasive medium (Norton metallic 150 grit sand paper) for additional 3,500 cycles per modified ASTM D 2486 and slip resistance test per ASTM C 1028 for uses in pedestrian areas or Calif Test Method No. 342 for uses in vehicular traffic areas. The average slip resistance of the three acceptable specimens shall not be less than 90% of initial tested coefficient of friction. No more than one individual specimen shall have long term slip resistance less than the 90 % of the initial tested coefficient of friction specified above.

(h) No material and product shall be constructed or installed over any utility facility or driveway apron without the approval of the owner and BOE permit engineer.

(i) All works including all necessary coordination and inspections shall be in conformance with the requirements as specified in Greenbook and its supplements, Brown Book, this and other standard plans.

SECTION 2
HANDHOLES, PRECAST MAINTENANCE HOLES AND SIMILAR STRUCTURES OR INSTALLATIONS

3-2.1 Handholes, Precast Maintenance Holes and Similar Structures or Installations.

3-2.1.1 General.

(a) Handholes, precast maintenance holes, and similar structures or installations shall be commercially available and of the highest quality consistent with their intended uses.

(b) All top sections of handholes and similar structures or installations shall not be constructed exceeding the permanent street grades without the uses of approved adjustment or riser rings. The permittee must submit street grades obtained from the City street plans for approval.

(c) Handholes, precast maintenance holes and similar structures or installations shall have adequate soil bearing surface, in firm soil, to prevent settling.

(d) Handholes, precast maintenance holes and similar structures or installations shall be made in the following two major categories of materials with other metal components or attachments:

(1) Concrete with reinforcing steels.

(2) Plastic resin, fiberglass reinforced plastic (FRP), reinforced plastic mortar (RPM), polymer or vitrified polymer composite, or any combination thereof.

(e) Manufacturer identification mark, product model number and manufacturing date shall be

made on the exposed side of the opening of the handhole, precast maintenance hole and similar structure or installation. Markings can be made on metal identification tag installed on the exposed side of the opening without any interference or blockage of the maintenance hole cover and frame and/or access to structure or installation. The marking shall have lettering of ½ inch high with line width of 1/8 inch or sizes otherwise approved by the City Engineer.

3-2.2 Required Information and Submittal.

In addition to the information as required in Public Works Products Approval Procedures, the following information shall be submitted to the City Engineer before any testing or approval can be granted:

(a) For materials and products consisting of plastic resin, fiberglass material, fiberglass reinforced plastic (FRP), reinforced plastic mortar (RPM), polymer concrete or vitrified polymer composite, or any combination thereof.

(1) A description of any felt or other fabric used to manufacture the products.

(2) Woven, non-woven or punched.

(3) Properties of aggregates, chopped glass fibers or other reinforcing required.

i. The amount, location and orientation of the chopped glass fibers.

ii. The grade of the glass fibers.

iii. The type and gradation of any aggregates or sands used.

3-2.3 Testing Requirements and Procedures.

3-2.3.1 Reinforced Concrete.

(a) If directed by the City Engineer or the Inspector, sample of reinforced concrete used to manufacture the handholes, precast maintenance holes and similar structures or installations shall be tested in accordance with requirements specified in the Greenbook and its supplement, Brown Book and in this and other applicable standard plans.

3-2.3.2 Plastic Resin, Fiberglass, Fiberglass Reinforced Plastic (FRP), Reinforced Plastic Mortar (RPM), Polymer Concrete or Vitrified Polymer Composite.

(a) Tests of plastic resin/fiberglass, fiberglass reinforced plastic (FRP), reinforced plastic mortar (RPM), vitrified polymer composite materials used in the manufacture of the handholes, precast maintenance holes, and similar structures or installations shall be performed on specimens taken from the finished materials or final products. The permittee shall provide adequate number of specimens required for the weight change test, the tensile strength test or the flexural strength test.

(b) The size of the weight change specimens shall be ½ inch x 1 inch x 3 inches. The size of the tensile strength specimens shall be "Dogbones" 1 inch (+1/32 inch, -1/16 inch) x 3 inches (+1/32 inch, -1/16 inch) x ¼ inch (+/- 1/32 inch) per ASTM D 638. The size of the flexural testing samples shall be ¼ inch x ½ inch x 6 inches.

(c) Control Specimens. Six specimens shall be cut from the finished product for testing. The specimens shall have the geometry specified herein and shall be designated as control specimens. The methods of testing for tensile or flexural strength shall be at the option of the manufacturer with the provision that the tests shall be conducted in an identical manner for both control and test specimens for each property sought. The control specimens shall be tested for ultimate flexural or tensile strength. The load versus deflection readings shall be taken and the values of load and deflection, at failure, for each specimen shall be averaged to establish the control value.

(d) Accelerated Service Conditions. Three specimens shall be taken from the finished materials or final products for testing under simulated accelerated service conditions. The specimens shall have the geometry specified herein. The specimens shall be weighed and measured for length, width, and thickness.

(1) Unless otherwise specified, the specimens, prior to any physical testing, shall be subject to accelerated service exposures and conditionings in accordance with ASTM D 756, Procedure E.

(2) After the exposure cycle has been completed, the test specimens shall be weighed, measured and visually examined for changes. The specimens shall then be tested for ultimate flexural or tensile strength under the identical conditions used for the control specimens.

(3) The average of the strength values for the test specimens shall be determined shall conform to the following:

i. No more than one individual specimen shall have less than retention of 75% of the control specimen values for ultimate flexural or tensile strength. The average retention of the three specimens shall not be less than 75% of the control specimen values.

ii. No more than one individual specimen shall have more than 2% change in weight or any dimension. The average change in weight or any dimension of the three specimens shall not be more than 2%.

iii. No specimens shall have cracking, delamination, crazing, checking, blistering, or surface pitting.

iv. Changes in color of specimens will be permitted only if the change does not

L.A.C.E. INDEX

indicate degradation of the material, and the change will not in the opinion of the City Engineer be detrimental to the overall appearance of the product.

(e) Chemical Resistance. Twenty-seven specimens shall be cut from the finished materials or final products and prepared in accordance with procedures described herein. Each specimen shall be weighed and measured as in 3-2.3.2.

(1) Three of the specimens shall be exposed to each of the chemical reagents listed below. The specimens shall be exposed to the chemicals in accordance with ASTM D 543, Immersion Test, Practice A, Procedures 1 and 2 with both conducted at room temperature, using standard laboratory atmosphere for 7 days.

CHEMICAL SOLUTIONS	**CONCENTRATION**
Sodium Chloride	5%
Sulfuric Acid	0.1 N
Sodium Carbonate	0.1 N
Sodium Sulfate	0.1 N
Hydrochloric Acid	0.2 N
Sodium Hydroxide	0.1 N
Acetic Acid	5%
Kerosene	Per ASTM D 543
Transformer Oil	Per ASTM D 543

(2) After the exposure cycle has been completed, each specimen shall be dried, weighed, measured, and tested for ultimate flexural or tensile strength in accordance with 3-2.3.2.

(3) The values of load and deflection at failure for each of the three specimens from each reagent exposure shall be recorded and averaged to establish the test values. Each specimen shall be visually examined for changes in appearance and conform to the following acceptance criteria:

i. Average retention of the control specimen values for ultimate flexural or tensile strength per procedures as described in 3-2.3.2(d)(3)i.

ii. Average change of weight or dimension per procedures as described in 3-2.3.2(d)(3)ii.

iii. No stain, etched mark, acid burn shall be present.

iv. No other defect or change in color as described in 3-2.3.2(d)(3)iii and iv.

L.A.C.E. INDEX

(4) All chemical solutions shall be made, mixed, stirred and maintained in accordance with the testing standards. (If requested by the City Engineer, obtain samples of each

solution to verify for the required concentration at the 1st day and the 7th day of the testing. If allowed by the City Engineer, no sample shall have concentration deviating more than 2.5% from the specified amount. Copies of the testing results shall be a part of the testing report.)

(f) Simulated Sunlight Exposure. If the material or product is used below grade and no part will be exposed to sunlight after installation and the material or the product will not be produced more than two months prior to its use and they will be properly stored and protected from any exposure of sunlight prior to start of construction by the manufacturer, the test may be exempted by the City Engineer.

(1) Three specimens cut from the finished materials or final products shall be prepared, weighed and measured in accordance with 3-2.3.2. The specimens shall be exposed under a fluorescent lamp in accordance with ASTM G 154, Cycle No. 1 of Appendix X2, which will be operating at 340 nM wavelength to simulate direct solar UV radiation for a period of 2,000 hours. After exposure, the specimens shall be measured, weighed, and visually examined for changes, and tested for ultimate flexural or tensile strength in accordance with 3-2.3.2.

(2) The values of load and deflection at failure for each of the three specimens of each set from the exposure shall be recorded and averaged to establish the test value. Each specimen shall be visually examined for changes in appearance. The specimens shall conform to the following acceptance criteria:

i. Average retention values for ultimate flexural or tensile strength per procedures as described in 3-2.3.2(d)(3)i.

ii. Average change of weight or dimension per procedures as described in 3-2.3.2(d)(3)ii.

iii. No other defect or change in color as described in 3-2.3.2(d)(3)iii and iv.

(g) Water Absorption.

(1) Three specimens shall be cut in accordance with 3-2.3.2 and weighed and measured. The specimens shall be exposed to water environments in accordances with ASTM D 570, Sections 6, 7.1 and 7.5.

(2) After the exposures are complete, the specimens shall be weighed, measured, and visually examined for changes and tested for ultimate flexural or tensile strength in accordance with 3-2.3.2 and conform to the following acceptance criteria:

i. Average retention values for ultimate flexural or tensile strength per procedures as described in 3-2.3.2(d)(3)i.

ii. Average change of weight or dimension per procedures as described in 3-

L.A.C.E. INDEX

2.3.2(d)(3)ii.

iii. No other defect or change in color as described in 3-2.3.2(d)(3)iii and iv.

(h) Flammability. Three specimens shall be tested per ASTM D 635 and have the following values:

(1) Flammability tests shall be conducted on specimens 1" wide x 4" long x finished product thickness. Each specimen shall be held in a horizontal position, be ignited on one end and the rate of burning along the length shall not be less than 0.3 inch per minute for each 0.1 inch of thickness.

3-2.3.3 Performance and Durability Test.

The handholes, precast maintenance holes, and similar structures or installations shall be tested in accordance with requirements specified below.

(a) Structural Loading and Deflection Test, if applicable, in accordance with 2-2.3.

(b) Impact Load Test. Any point on the top portions of the handholes, precast maintenance holes, and similar structures or installations, and the covers and frames shall withstand an impact administered with a weight having a "C" tup when tested with ASTM D 2444 without puncturing, cracking, delaminating or splitting. For covers and frames, the test shall be conducted with the covers and frames resting on a flat, rigid surface, such as concrete or an one inch thick steel plate.

(1) For installation used for electrical application or installation used for other usage but within the vehicular traffic area, the impact load shall be equal to 70 ft-lbs. Unless otherwise specified, for installation used for non-electrical application and within pedestrian traffic area, the impact load shall be equal to 45 ft-lbs.

(2) For handhole, precast maintenance hole, and similar structure or other installation that contain any wall dimension greater than 48 inches, the impact load test can be performed by the approved independent testing laboratory at the manufacturing plant or distribution yard if permitted by the City Engineer.

(c) Long Term Abrasion and Slip Resistance Test in accordance with 3-1.2.1(g). All materials or products made of reinforced concrete or cementitious materials and with broom finishing shall be exempted. The average wear (loss) of the Initial Abrasion Test shall not exceed 0.92 in^3/7.75 in^2 for non-concrete products and 0.46 in^3/7.75 in^2 for metal products when tested per ASTM C 418, and not to exceed 0.05 inch for non-concrete materials and 0.03 inch for metal materials when tested per ASTM D 2486. The average slip resistance shall not be less than 90% of the initial tested coefficient of friction.

L.A.C.E.
INDEX

SECTION 3
COVERS AND FRAMES AND SIMILAR INSTALLATIONS

3-3.1 Covers and Frames and Similar Installations.

3-3.1.1 General.

Covers shall be solid and contain no slot or opening without any approved protective lid. Covers can be either round, square or rectangular provided with slip resistant surfaces and comply with the American's with Disabilities Act (ADA) requirements. Unless otherwise approved by the City Engineer, covers shall be placed on the handholes, precast maintenance holes and similar structures or installations and solidly supported on all sides or installed in concrete pavement or over an approved concrete footing. If a frame is required to support the cover, it shall be tested with the cover in place and supported as it will be in use.

(a) Covers and frames or other supports may be manufactured from steel, cast iron, reinforced concrete, aluminum, plastic resin or fiberglass, FRP, RPM, vitrified polymer composite. If covers, frames or supports are made of dissimilar materials, approved protective coatings shall be in all contact surface areas.

(b) All steel covers and frames shall be hot-dip galvanized. All other metal covers and frames shall have approved asphaltic paint, coal tar epoxy or non-corrosive coating in accordance with Greenbook and its supplements, Brown Book or applicable standard plans before testing and fabrication inspection. All bearing surfaces of the covers and frames shall be machined and the covers shall seat firmly into the frame without rocking. All metal covers shall have slip resistance texture treatment if necessary to comply with the slip resistance requirements described herein. All non-concrete or non-metal material or product shall be in grayish color.

(c) Covers weighing less than 200 lbs attached to the handholes, precast maintenance holes, and similar structures or installations that have inside clear height dimension of 18 inches or more shall be provided with a vandal-proof fastening devices. The fastening devices shall require a commercially available tool to open and remove the cover. The fastening devices shall be made of a non-corrosive material. When applicable, such devices shall have a minimum torque strength of 30 ft-lbs and a pullout strength of 750 lbs.

(d) The perimeters of the covers shall be flush with the tops of the supporting frames or adjacent pavements. All covers shall not contain any crown or top surfaces exceeding 1/8 inch above the supporting frames or adjacent pavements.

(e) (1) All metal covers, except the maintenance hole covers, shall have owner and manufacturer identification stamped or placed over a tag that is made of similar metal

and finish surface and welded at the center of the cover. The surface area or the metal tag shall be within two inches wide with text size of one inch for the owner identification and text size of 1/2 inch for the manufacturer identification. Additional metal tag, of reduced size if approved by the City Engineer, with the manufacturer identification shall be welded or placed at the inside face of the support frame in accordance with the method approved by the City Engineer.

(2) All cast iron covers shall be cast with the letters for the type of covers, and the owner's identification in accordance with the instruction approved by the City Engineer. The letters shall be 2 ½ inches high with ½ inch line width, and placed in the center of the cover. All letters shall be flush with the finished surface of the cover. No area of the finished surface shall have any groove or depression deeper than 3/16 inch and/or wider than ½ inch.

i. Foundry identifying mark, heat number and manufacturing date shall be cast on the bottom of the cover and on the inside of the frame. Additional foundry identifying mark with text of ½ inch high shall be cast on the top of the frame or at the location on top of the cover approved by the City Engineer.

ii. For imported covers and frames and whenever is applicable, the owner's identification and the marking of the country of origin shall have letters in compliance sizes in accordance with Sec.134.46 of Title 19-Custom Duties of the Code of Federal Regulations. All markings shall have text of 1 3/16 inches high and 3/16 inch wide on the cover. Provide additional manufacturer identification with letters ½ in high with line width of 1/8 inch on the upper portion of the frame which remains exposed.

(i) During fabrication and or installation, samples of all concrete and metal covers shall be taken and tested with the properties conforming to the requirements indicated in the Greenbook and its supplement, Brown Book, and applicable standard plans.

(j) Covers and frames with materials that are made of plastic resin, fiberglass, FRP, RPM, polymer concrete or vitrified polymer composite shall not be used in vehicular traffic area.

3-3.1.2 Performance and Durability Test. Unless otherwise specified, all covers and frames shall be tested in accordance with the requirements specified below.

(a) Structural loading and deflection test, if applicable, in accordance with 2-2.3.

(b) Impact load test in accordance with 3-2.3.3.

L.A.C.E. INDEX

(c) Long term abrasion and slip resistance test in accordance with 3-2.3.3. All materials or products made of only concrete or cementitious materials and with broom finish shall be exempted unless it is required by the City Engineer. All non-concrete materials or

products shall be tested.

SECTION 4
TEMPORARY TRENCH PLATES, TREE WELL COVERINGS, VENT GRATES AND SIMILAR INSTALLATIONS

3-4.1 Temporary Trench Plates.

(a) General. Whenever trenches and excavations within City's public right-of-way cannot be completely backfilled or resurfaced within the same work day, they shall be bridged with temporary trench plates made of steel to permit an unobstructed flow of vehicular and pedestrian traffic. The permittee shall provide, install and maintain the temporary trench plates.

(1) The temporary trench plates shall be secured against movement by using holding devices such as adjustable cleats, angles, bolts, tack welding or other devices.

(2) The temporary trench plates shall be installed to operate with a minimum of noise.

(3) The temporary trench plates shall be extended minimum one foot beyond the edges of the trench.

(4) When the temporary trench plates are removed, the dowel holes in the pavement shall be backfilled with either fine graded asphalt concrete mix, concrete slurry or an equivalent material approved by the City Engineer. The contractor shall be responsible for maintenance of the temporary trench plates and the asphalt concrete ramps.

(5) The contractor shall be responsible for maintenance of the temporary trench plates and the asphalt concrete ramps.

(6) The temporary trench bridge shall be installed in accordance with the following methods and details:

i. Method 1. For speeds more than 45 mph, the pavement shall be cold planed to a depth equal to the thickness of the trench plate and to a width and length equal to the dimensions of the trench plate.

ii. Method 2. For speeds less than 45 mph, the approach plate and ending plate (if longitudinal placement) shall be attached to the roadway by a minimum of two dowels pre-drilled into the corners of the plate and drilled two inches into the pavement. Subsequent plates may be butted to each other. (The permittee has the option of installing temporary trench plates using Method 1 for speeds less than 45

mph.)

(7) The trench shall be adequately shored to support the temporary trench plates, vehicular and/or pedestrian loads. Temporary paving materials shall be used to feather the edges of the temporary trench plates to minimize wheel impacts and comply with ADA requirements. Temporary paving material placed in the roadway shall be placed with four inch run for each one inch thickness of temporary trench plate if the plate is installed per Method 2. Fine graded temporary paving material placed in the pedestrian areas including the crosswalks shall be placed and compacted to form ramps with a maximum slope of 8.50% or a 12 inch run for each one inch thickness of trench plate, and to comply with ADA requirements if the trench plate is installed per Method 2.

(8) Advanced traffic warning signs are required when temporary trench plates are used in the traveled way. The signs shall be type with letters "Steel Plates Ahead" and shall be placed in conformance with the latest edition of the "WATCH" adopted by the City.

(b) The temporary trench plates shall have the following:

(1) One inch thick for trenches up to three feet span and 1 1/4 inches thick for up to a four feet span. For spans greater than four feet, a structural design by a registered Civil or Structural Engineer shall be submitted and approved in accordance with Greenbook Section 2-5.3 and submittal procedures specified in this standard plan.

(2) Each temporary trench plate shall have a leveled surface without deformation and an approved non-skid surface for the vehicular or pedestrian traffic. The surface shall have dynamic coefficient of friction a 0.35 for vehicular traffic when tested per Calif Test No. 342, and the static coefficient of friction of 0.6 for pedestrian traffic when tested per ASTM C 1028. For temporary trench plates serving for both traffic, they shall be tested and conform to both requirements.

(3) Temporary trench plates shall be made of ASTM A 36 steel. Temporary trench plates and non-skid surfaces shall have a minimum abrasion resistance and coefficient of friction as specified on 3-1.2.1(g).

(4) Proper identification of the type of coefficient of friction, the manufacturing date and the name of non-skid surface fabricator shall be provided on the surfaces of the temporary trench plates.

(5) The inspector may determine the trueness of the temporary trench plate by using a straight edge and will reject any plate that is permanently deflected. When requested by the Inspector, the temporary trench plate and the non-skid surface shall be tested for the coefficient of friction.

3-4.2 Tree Well Coverings and Vent Grates.

(a) General. Tree well coverings and vent grates within the pedestrian traffic area shall comply with the ADA requirements. Opening shall not be greater than ½ inch in the direction of travel.

(1) Vent grates shall be bicycle safe and shall not have any slot or opening greater than ½ inch wide.

(2) Tree well coverings shall be made from cast iron, steel, and reinforced concrete with dimensions conforming to current standard plans. Non-standard sized coverings and unreinforced concrete coverings shall not be allowed.

(3) Vent grates shall be made from cast iron, steel or aluminum.

(4) Tree well coverings and vent grates, utilizing any intermediate or non-composite support system for structural purposes shall have the support system permanently attached in such a manner as to prevent removal or disassembly.

3-4.2.1 Performance and Durability Test.

In addition to the physical property tests as required by the Greenbook and its supplements, and the Brown Book, all covers and frames shall be tested in accordance with requirements specified below.

(a) Structural loading and deflection test, if applicable, in accordance with 2-2.3.

(b) Impact load test in accordance with 3-2.3.3.

(c) Long term abrasion and slip resistance test in accordance with 3-1.2.1(g). All covers or grates made of only reinforced concrete or cementitious materials with broom finish shall be exempted unless it is required by the City Engineer. All tree well coverings and vent grates made of metal materials with ½ inch wide bicycle proof slot openings shall be exempted from the slip resistance test. All other concrete materials or products without broom finish, metal and non-concrete materials or products as described in 3-2.1.1(d)(2) shall be tested in accordance with 3-1.2.1(g).

L.A.C.E.
INDEX

SECTION 5
DETECTABLE WARNING SURFACE

3-5.1 General

(a) The material and testing requirements specified herein are for detectable warning surface used for exterior and pedestrian traffic applications. They are not considered for vehicular traffic areas.

(1) All installers shall be manufacturer's certified or authorized installers. Certification shall be accomplished by participating in onsite training provided by the manufacturer or its representative. Proof of certification or authorization shall be submitted as part of the submittal prior to the start of any installation work.

(b) The truncated domes and the non-slip surfaces shall be made of homogeneous material. Any use of used or scrap part of the detectable warning surface from other projects is not allowed. Any repair method or repair material of the detectable warning surface shall not be allowed unless they are tested and approved by the City Engineer. If considered by the City Engineer, the repair method and materials shall be separately submitted and tested.

(c) The detectable warning surface shall have consistent dimension, thickness and color as specified in this standard plan. The surface shall have uniform flatness without warping or sagging. (For area requiring multiple sections of detectable warning surface, the sections shall be equally sized and spaced.) All detectable warning surface shall be inspected for defects, damage, cracks, scratches, warping, etc. prior to installation.

(d) For new concrete ramp, cast in place type of detectable warning surface shall be used. All detectable warning surface shall be constructed on approved mortar or adhesive material solidly supported over a minimum four inch thick concrete slab if cast in place detectable warning surface is used or over a minimum three inch thick concrete slab if surface-mounted type of detectable warning surface is used. No cavity or void shall be allowed within the installation.

(e) The detectable warning surface shall be constructed in dimensions over the curb ramps as shown in S-442, latest edition. No detectable warning surface shall exceed the overall surface dimensions by $\pm 1/2$ inch. Additional area of detectable warning surface beyond the limits allowed under S-442 and this standard plan which may reduce the negotiability and the safety of the users shall not be allowed. The detectable warning surface shall have the radius where required.

(1) The detectable warning surface shall also be installed over the curb ramps located in the center medians where required in accordance with approved details.

(f) No detectable warning surface shall be installed over non-standard curb ramps. All non-standard curb ramps shall be removed and reconstructed prior to the installation of the detectable warning surface. No detectable warning surface shall be constructed over any maintenance hole and cover.

(g) All material including the mortar and grout and any adhesive system used in the installation shall be free of efflorescence and have resistance to ultraviolet light, chemical exposure, corrosion, growth of fungus or mildew and other environmental conditions specified herein.

(h) Any cement mortar or grout used as part of the installation shall be in conformance with the Greenbook and its supplements and the Brown Book, and shall be fungus and mildew resistant. Cement mortar bed with latex admixture used as thin set method and the uses of other adhesive or sealant materials shall be submitted for review and testing prior to any installation.

(i) The width of the mortar joint to the adjacent concrete pavement shall be minimum 1/8 inch wide and not to exceed ¼ inch. The width of the joint to the abutting detectable warning surface shall not exceed 1/8 inch.

(j) No installation of any adjoining detectable warning surfaces shall result in any difference in level of 1/16 inch or the spacing of the adjoining truncated domes to exceed the maximum spacing as specified herein. No installation of the cast-in-placed detectable warning surface shall result in any difference in level with adjacent slab or pavement exceeding 1/8 inch.

(k) Detectable warning surface shall not be installed over expansion or control joint without the approval of the City Engineer.

(l) Any fastener used as part of the installation shall be made of corrosion resistant material and shall be recessed within the truncated dome or the detectable warning surface. No fastener or any part thereof shall be used as a substitute of the truncated dome or be completely exposed or extended above any truncated dome or other portion of the surface that would reduce the durability and slip resistance of the surface, and the detectability and effective use of wheelchair or cane/crutch.

(m) Cutting of the detectable warning surface shall be avoided. If cutting is considered as part of installation method, the cutting method and patching procedures shall be submitted for review and approval by the City Engineer. No detectable warning surface less than 6 inches in any dimension or partially cut truncated dome shall be allowed. No detectable warning surface with two adjoining cut edges shall be allowed for any installation without the approval of City Engineer. Cut edge shall be sealed or patched in

accordance with the approved manufacturer's recommended procedures. Samples of detectable warning surface with cut edges shall be used for testing specified in this standard plan.

(n) All detectable warning surface shall have manufacturer name or identification and manufacturing date with maximum text size of 1/2 inch but not less than ¼ inch on minimum two sides or approved locations of the panel.

(o) The contractor shall provide product and labor warranty for the detectable warning surface against any defect, cracking, deformation, discoloration, corrosion and movement for minimum five years or duration as specified on the permit by the BOE permit engineer, whichever is most stringent.

(p) (1) The nominal thickness of the surface-mounted type of detectable warning surface shall be 1/8 inch exclusive of the height of the truncated domes. The perimeter edge shall be tapered with bevel lip in accordance with Standard Plan No. S-442. Any detectable warning surface greater than 1/8 inch thick, but not to exceed ¼ inch, shall have bevel lip and edge treatment not exceeding 1/8 inch high. The width of perimeter edges to the centers of the truncated domes shall not exceed 1.65 inches.

(2) The cast-in-place type of detectable warning surface including the embedment flange or tile rib shall not exceed 1 3/8 inches thick and no bevel or chamfer shall be allowed. From edges of the detectable warning surface to the centers of the truncated domes shall not exceed 1.65 inches.

(q) The truncated domes of the detectable warning surface shall have in-line pattern and shall be consistently aligned in the horizontal and the vertical directions. The truncated domes shall have consistent spacing and height. The truncated domes shall be completely formed domes and measured 0.20 inch in height from top of surface, 0.45 inch diameter at the top of the dome and 0.90 inch diameter at the base. The top and base of the dome dimensions shall form a 50% ratio. The truncated domes shall be spaced 1.65 inches from center to center horizontally and 2.35 inches from center to center diagonally. For areas where adjoining detectable warning surface are required, the spacing between the first rows of the truncated domes of any two adjoining detectable warning surface shall not exceed 2.35 inches. No truncated dome shall be made completely of metal fastener or other substituted material as indicated in 3-5.1(l). (Truncated domes in staggered pattern used for positioning surface shall not be used in the curb ramp.)

(r) The truncated domes, tile or panel surfaces shall not consist of any raised points or micro-textures greater than 0.045 inch in height. The height of truncated dome shall be measured from the top of surface, without any raised points or micro-textures, to the top of the truncated dome and not to the raised points or micro-textures of the dome. Any

use of the raised points or micro-textures shall not reduce the 0.20 inch height requirement for the truncated domes.

(s) The detectable warning surface shall also have physical properties and performance values from testing as specified herein.

(1) The detectable warning surface completely constructed of the concrete or cementitious materials without the use of any resin or plastic shall have minimum properties and performance values as indicated in Greenbook. (Truncated domes produced by molding or stamping the top surface of freshly poured or precasted concrete or surfaced applied products are not an approved installation and are not permitted.)

The concrete or cementitious materials shall also have the following:

i. Hardness: Moh's Hardness Scale of 6 or higher when tested per Mohs Scale Testing.

ii. Water Absorption: Maximum 0.30% when tested per ASTM D 570, C 97 or equivalent.

(2) Any part of the detectable warning surface that is manufactured with glass, carbon, plastic or polymer resin, fiberglass, fiberglass reinforced plastic (FRP), reinforced plastic mortar (RPM), vitrified polymer composite, or any combination thereof shall have the following properties and performance values:

Polymer Concrete

i. Ultimate Compressive Strength: Minimum 7,500 psi when tested per ASTM C 39, D 695 or approved equivalent.

ii. Ultimate Tensile Strength: Minimum 1,700 psi when tested per ASTM C 496, D 638 or approved equivalent.

iii. Ultimate Flexural Strength: Minimum 2,400 psi when tested per ASTM C 947, D 790 or approved equivalent.

iv. Hardness: Shore (Durometer) Test, minimum 75 Shore D Hardness when tested per ASTM D 2240.

v. Water Absorption: Maximum 0.50% when tested per ASTM D 570, C 97 or approved equivalent.

vi. Flammability: As described in 3-2.3.2(h)(1).

Vitrified Polymre Composite (with or without reinforced fiber or woven roving).

i. Ultimate Compressive Strength: Minimum 18,000 psi when tested by ASTM D 695.

L.A.C.E. INDEX

ii. Ultimate Tensile Strength: Minimum 12,000 psi when tested per ASTM D 638.

iii. Ultimate Flexural Strength: Minimum 24,000 psi when tested per ASTM D 790.

iv. Hardness: Shore (Durometer) Test, minimum 75 Shore D when tested per ASTM D 2240.

v. Water Absorption: Maximum 0.10% when tested per ASTM D 570.

vi. Flammability: As described in 3-2.3.2(h)(1).

(t) Color: Surface shall have Federal Color No. 33538 in accordance with Federal Standard No. 595A/595B and shall contrast with adjacent concrete surface, either light–on-dark or dark-on-light, with contrast value greater than 70% in accordance with Appendix Note A4.29.2 of the Accessibility Guidelines For Buildings and Facilities (ADAAG) developed by United States Access Board. Color shall be integral with the detectable warning surface and shall not be surface applied. Paint or surface applied coating shall not be used. No loss of color after abrasion resistance test or environmental conditioning as indicated in this standard plan shall be allowed.

(u) Efflorsecence Test: No efflorescence when tested per modified ASTM C 67.

(v) Fungal and Mold Resistance: No growth or with the Rating of 10 when tested per ASTM D 3274.

(w) Chemical Stain Resistance: No change of weight and dimension. No appearance of discoloration, stain, deformation or etch mark when tested for Standard Dirt, Bleach, Gums, Inks (and graffiti), 5% Urea, Turpentine and 1% Soap Solution by ASTM D 650 or C 1378 for 24 hours.

(x) All detectable warning surface shall be inspected for defect, damage, crack, scratch and warping prior to installation. All detectable warning surfaces with the deficiencies shall be removed from the job site immediately.

3-5.2 Basic Physical Property Tests.

(a) Unless otherwise specified, all detectable warning surface shall be tested for the property values as specified in 3-5.1(s) through (w) in accordance with the applicable material standards specified. The permittee shall coordinate with the testing laboratory for the numbers and the sizes of specimens and/or coupons for the testing.

(b) After the detectable warning surface has been satisfactorily completed the tests listed above and has met the property requirements, all detectable warning surface shall also be tested for the following values in accordance with 3-1.2.1(g). (Unless otherwise specified, all specimens shall be minimum 12" x 12" detectable warning surface embedded in concrete pavement with applicable thickness as specified in 3-5.1(d), approved cement bed or adhesive system and perimeter sealing.) For cast in place type of

L.A.C.E. INDEX

detectable warning surface and if applicable, one embedment flange (also referred as "tile rib") shall be embedded in each specimen. If any fastener or anchoring system that has no structural value is used in the material or product, the number of the fastener or anchoring system used in each specimen shall be proportioned to the total number of the fastener or anchoring system used over the actual material or product surface area, but not to exceed one.

(1) Initial Slip Resistance Tests in accordance with 3-1.2.1(g). Three 12" x 12" (or specimens, with sizes cut to fit the Gardner abrasion apparatus for the abrasion resistance test, mechanically held together to form 12" x 12" specimens) shall have minimum static coefficient of friction of 0.8 for ramp and 0.6 for level surface when tested per ASTM C1028. (Unless the manufacturers can distinguish their products for ramp or level surface application, all detectable warning surface shall be tested for the ramp application with the most stringent value.)

(2) Initial Abrasion Resistance: After Initial Slip Resistance test described above, test for Initial Abrasion Resistance with average wear (loss) not to exceed 0.05 inch when tested per modified ASTM D 2486. Height measurements shall be taken on each of the minimum six dome locations from the top surface to the top of truncated dome, excluding the raised points or micro-textures as discussed in 3-5.1(r), before and after the Initial Abrasion Resistance test. The wear (loss) of each truncated dome shall be computed by subtracting the final measurement from the initial measurement.

(3) Long Term Abrasion and Slip Resistance Tests: Three sets of specimens from the Initial abrasion test shall be used to continue for the long term abrasion and slip resistance tests. The average slip resistance shall not be less than 90% of initial tested coefficient of friction, and not less than 0.5.

3-5.3 Performance and Durability Tests.

(a) In addition to the physical properties listed above, the detectable warning surface shall be subject to the following performance and durability testing after exposed to the environmental conditioning specified below:

L.A.C.E. INDEX

(1) Environmental Conditioning.

i. Chemical Exposure Test per ASTM D 543 and procedures as described in 3-2.3.2(e)(4) with exposures for the duration of seven days. (Note: If detectable warning surface is completely made of concrete or cementitious materials and with cementitious mortar bed and grout and without any use of resin or plastic, and no adhesive or perimeter edge treatment is used during installation; the

Chemical Exposure Test shall not apply.)

CHEMICAL SOLUTIONS	CONCENTRATION

Kerosene	Per ASTM D 543
Diesel Oil	Per ASTM D 543

ii. Accelerated Weathering Test per ASTM G 151 with exposure period of 2,000 hours of xenon arc ultraviolet light and water spray. The specimens shall not show any deterioration, fading, chalking, color change or cracking. (If the detectable warning surface is completely made of concrete or cementitious materials with cementitious mortar bed and grout and without any use of resin or plastic, and without any use of adhesive or no perimeter edge treatment during installation, the Accelerated Weathering test shall not apply.)

iii. Elevated Temperature Test with specimens to be conditioned at 80 °C (176 °F) in accordance with procedures as specified in ASTM D 756, Procedure E. Specimens shall not show any deterioration, fading, chalking, color change or cracking. Specimens shall be allowed to cool to room temperature before next cycle of testing. If detectable warning surface is completely made of concrete or cementitious materials with cementitious mortar bed and grout and no adhesive or perimeter edge treatment is used, the Elevated Temperature Test shall not apply.

iv. Salt and Spray Performance Test per ASTM B 117 (and evaluation of rusting by ASTM D 610, and Blistering by ASTM D 714) with exposure period of 200 hours. No appearance of any defect, discoloring, scaling or rusting shall be present.

L.A.C.E. INDEX

(2) Performance and Durability Tests:

i. Compression Strength Test per ASTM C 936 or C 648 with a 1000 lbs of force over the center of a truncated dome. No appearance of any crack, failure, damage or permanent deformation shall be detected.

ii. Impact Resistance (Weight Drop) Test per modified ASTM D 2444. A selected

truncated dome and a location of beveled edge of the detectable warning surface shall be subject to 24 ft-lb impact achieved by dropping a steel rod of 12 lbs with "B" Tup from an approximate height of two feet. A failure is noted if any appearance of crack or hairline fracture, chipping, failure, damage or permanent deformation of the truncated dome is visible in the specimen. Localized indentation is not considered as a failure.

iii. Sidewalk Traffic Impact Test per modified ASTM D 2794 with each specimen supported at a 60 degree angle from horizontal and subject to a 4 ft-lb impact force from a metal cylinder weight with similar "B" Tup end, dropped from a predetermined height and positioned by guide tube, at the side of the truncated dome. No appearance of any crack, failure, chipping, damage or permanent deformation shall be detected.

iv. Bond Strength or Adhesive Test per modified ASTM C 1583 with bond strength not less than 100 psi. (For any detectable warning surface that consists of structural fastener or anchoring system with or without the use of adhesive in the installation, full size product sample (minimum 3 feet x 4 feet) with actual amount of fasteners and anchoring system can be used in lieu of sample size as described in 3-5.2(b) for the Bond Strength or Adhesive Test.)

(b) Performance and Durability Testing Procedures.

(1) With the chemical exposure conditioning per ASTM D 543 as described above, four groups of specimens and each group containing a total of 27-12" x 12" specimens with a minimum four inches thick concrete base and applicable mortar base or adhesive (with three specimens for the exposure to each of the nine chemical reagents listed) after exposure, perform the following tests with number of specimens specified:

i. Compression Strength Test as described above-One group of specimens exposed to each of the nine chemical reagents.

ii. Impact Resistance (Weight Drop) Test as described above-One group of specimens exposed to each of the nine chemical reagents.

iii. Sidewalk Traffic Impact Test as described above-One group of specimens exposed to each of the nine chemical reagents.

L.A.C.E. INDEX

iv. Bond Strength or Adhesive Test as described above-One group of specimens exposed to each of the nine chemical reagents.

(2) Provide number of specimen as specified below for the Accelerated Weathering conditioning per ASTM G 151 as described in 3-5.3(a)(1)ii and perform the following

tests after the exposure:

i. Compression Strength Test as described above-Three specimens.
ii. Impact Resistance (Weight Drop) Test as described above-Three specimens.
iii. Sidewalk Traffic Impact Test as described above-Three specimens.
iv. Bond Strength or Adhesive Test as described above-Three specimens.

(3) After the Elevated Temperature conditioning described above, perform the following tests with number of specimens specified:

i. Compression Strength Test as described above-Three specimens.
ii. Impact Resistance (Weight Drop) Test as described above-Three specimens.
iii. Sidewalk Traffic Impact Test as described above-Three specimens.
iv. Bond Strength or Adhesive Test as described above-Three specimens.

(4) After the Salt and Spray conditioning per ASTM B 117 as described above, perform the following tests with number of specimens specified:

i. Compression Strength Test as described above-Three specimens.
ii. Impact Resistance (Weight Drop) Test as described above-Three specimens.
iii. Sidewalk Traffic Impact Test as described above-Three specimens.
iv. Bond Strength or Adhesive Test as described above-Three specimens.

SECTION 6
BRICK, CONCRETE OR OTHER DECORATIVE PAVERS

3-6.1 General.

(a) All pavers shall be submitted with the Manufacturing or Quarry Certificate indicating the physical properties of the pavers to the City Engineer for review and approval. The physical properties of the materials shall conform to the minimum physical properties specified herein.

(b) The pavers covered in this standard plan are for exterior application and with pedestrian traffic. If considered by the City Engineer, any pavers intended for the driveway apron shall be submitted for appropriate testing as determined by the City Engineer and with structural calculations for the vehicular traffic loadings. All paver surfaces shall be level and shall not be made of or contain any split face, cobble or pebble stone. All pavers shall not be acid sensitive or have any iron or rust stains or etch marks.

(c) Unless otherwise specified and wherever is applicable, all pavers shall be impervious and have minimum wear rating of Group V or equivalent in accordance with Porcelain Enamel Institute (PEI).

(d) Unless otherwise specified, all pavers shall be tested per Mohs Scale Testing and have Mohs Hardness Scale of 6 or higher. All pavers shall be tested per ASTM C 648 and have breaking strength not less than 250 lbs when the paver actually breaks into two or more pieces. All pavers shall be tested per ASTM C 482 or C 1583 with minimum bond strength of 100 psi to the mortar base and to rigid concrete pavement.

(e) No pavers shall be allowed on the top of concrete curb or curb ramp.

(f) All pavers shall be installed over mortar base and slip sheet (if required by the City Engineer) on top of minimum three inches thick rigid concrete pavement and compacted aggregate bases and subgrade. If paver is approved to be installed over driveway apron, the rigid concrete pavement support shall conform with the minimum thickness as determined by structural calculations but not less than the thickness as specified for driveways shown in Standard Plan No. S-440. When requested by the City Engineer, the rigid concrete pavement shall have one inch diameter weep hole to the bottom of the pavement every five feet covered with approved filter cloth. For locations where high water table existed, install approved moisture barrier below rigid concrete pavement and weep hole over the aggregate bases and subgrade. Turn the moisture barrier up or down against the back of concrete curb, abutting building wall or foundation and seal all openings and around the weep holes, from moisture penetration.

(g) Unless otherwise specified, all pavers shall have cementitious mortar beds, grout joints or approved bond coats. All grout joints shall be a minimum of 1/8 inch but not to exceed 3/8 inch wide.

(h) Sand joint is not allowed in any installation. All pavers, mortar beds, grout joints and approved bond coats shall have the resistances to the following:

(1) Paver, mortar bed and grout joint materials shall have resistance to fungus and growth of mold, and efflorescence when tested per ASTM D 3273 and ASTM C 67, respectively. Any installation using a polymer adhesive as the bonding or grout joint material shall be tested for the bond strengths with each of the environmental conditioning as specified in 3-5.3(a)(1).

(2) Paver shall have the chemical resistance when tested per ASTM C 650.

(i) Size of the pavers if different unit pavers are used, size of grout joint, thickness of the mortar bed and all installation method and procedures must be provided and submitted for the City Engineer's review and approval.

(j) All style and color of the paver shall be final-approved by Los Angeles City Cultural Affairs Department and BOE permit engineer.

(k) No paver shall have coating or sealer before and after the installation without the review

and testing by the City Engineer. If requested by the City Engineer, pavers shall be tested for presence of any coating by ASTM C 216.

(l) All pavers shall have static coefficient of friction not less than 0.6 when tested per ASTM C 1028 for pedestrian area containing slope less than 2%. For pedestrian area containing slope greater than 2% and driveway apron area where allowed by the City Engineer, the pavers shall have static coefficient of friction not less than 0.8 when tested per ASTM C 1028. In addition, all pavers in the driveway apron area shall have dynamic coefficient of friction not less than 0.35 when tested per Calif Test Method No. 342.

(m) All pavers shall have no rounded or beveled edges or chamfers.

(n) All pavers shall have minimum six inch wide concrete collars constructed around all maintenance holes, tree wells, street lighting standards or similar installations. All pavers shall have approved expansion joints at the footings of parking meters, bicycle racks, newspaper stands, control cabinet and other similar installations. No other installations shall be allowed directly on top of the pavers. Construct concrete footings for such installations where necessary before paver installation.

(o) All unit pavers shall have approved concrete rigid edge restraints to secure the whole paving system laterally including the area along the parkway. Concrete rigid edge restraints shall be built before pavers are laid.

(p) No paver smaller than 1/3 of the whole paver in width shall be used any installation.

(q) Patterns of the pavers shall be arranged on the submittal and/or in the field. All narrow gaps between the pavers and concrete curbs or concrete rigid edge restraints or collars shall be filled by mortar. Care should be given to adopt an appropriate pattern conforming to the any curving character of the surface area or round corners.

(r) All pavers and rigid concrete pavement shall have expansion joints in spacing not to exceed 15 feet. All pavers shall have expansion joints at the changes of bond pattern, paving slope or direction, at separation of dissimilar materials, along the perimeter such as the adjacent walls, foundation or fixed objects, and shall correspond with the control or expansion joints in the mortar bed and the rigid concrete pavement below. Expansion joint filler shall be highly compressible and durable when exposed to weather or abrasion and conform to the Greenbook and its supplements and the Brown Book.

(s) All pavers shall be laid in accordance with standard bricklaying or tile setting procedures. No paver shall be laid in mortar setting bed with more than two feet ahead of the laying of the pavers.

(t) The edges of any paver shall not vary from the plane of adjacent pavers and surfaces more than 1/8 inch.

(u) Unless otherwise specified, all grout joints shall be tooled with a concave finish.

L.A.C.E.
INDEX

(v) No installation shall result in any ponding or interruption of surface flow. Larger paved areas or areas containing planting beds higher than the paving surface shall have intermediate or area drains, or scupper approved by the BOE permit engineer.

(w) All pavers shall be protected from mortar or grout stains.

(x) When deemed necessary, it shall be the City Engineer's discretion to request the permittee to perform additional testing in addition to those specified in this standard plan for verification of the physical properties of the pavers at the permittee's expense.

(y) All construction shall conform to the requirements as indicated in this standard plan and the standard industry practices as recommended by the Brick Institute of America, BIA (2815 Frampton Ave, Torrance, Calif 90501, http://www.masonryinstitute.org), Brick Industry Association (11490 Commerce Park Drive, Reston, Virginia 20191, http://www.brickinfo.org), Ceramic Tile Institute of America, Inc. (12061 Jefferson Blvd., Culver City, Calif 90230-6219, http://www.ctioa.org.), the Interlocking Concrete Pavement Institute, ICPI, (14441 I Street, NW, Suite 700, Washington, D.C. 20005-6542, http://www.icpi.org), and Porcelain Enamel Institute, PEI (3700 Mansell Road, Suite 220, Alpharetta, GA 30022, http://www.porcelainenamel.com), whichever is applicable. If there are any conflicts, the most stringent requirements shall govern.

(z) It shall be the permittee's responsibilities to ensure the future availability of the approved paver and/or maintain adequate amount of spare paver for the future maintenance and repair. No substituted paver shall be allowed for any change or repair.

(aa) Unless otherwise specified, all pavers or pavings consisted of exposed aggregates shall be tested per modified ASTM C 627 with 300 lbs weight per each steel wheel for a total of 450 cycles. The number of loss or damaged aggregates along the wheel path shall not be greater than 1%.

3-6.2 Brick Pavers.

(a) Brick paver shall be unglazed paving brick to support pedestrian traffic. All brick paver shall be non-effloresced brick paver with Class SX, Type 1 Traffic, and Application PX as described in ASTM C 902 and shall have a minimum a 2 5/8 inch thickness.

(b) Brick paver shall have minimum compressive strength of 8,000 psi, maximum water absorption rate of 5% and weathering index less than 50 when tested with ASTM C 67. Brick paver shall be within the allowable dimensional tolerances (± 1/16 inch in length, width and depth) and have the range of chippage less than 1/4 inch in edge and 3/8 inch in corner as described in ASTM C 902.

(c) Brick paver shall have minimum abrasion resistance of 35 when tested per modified

L.A.C.E. INDEX

ASTM C 241; minimum abrasion wear value of 35 when tested per ASTM C 501; or maximum Abrasion Index of 0.11, or a maximum volume abrasion loss of 0.10 in^3/0.16 in^2 (or maximum abrasion loss of 0.67 inch) when tested in accordance with ASTM C 418.

(d) Mortar bed shall be Type M mortar with minimum compressive strength of 1,800 psi and conform with ASTM C 270.

(e) The brick pavers shall meet the required minimum coefficient of friction as specified herein before and after the abrasion resistance test.

(f) Brick paver shall be constructed in 90-degree Herringbone pattern.

(g) If a manufacturing certificate is submitted with all the physical property data and the data conform with the requirements specified herein, only the abrasion wear test and the slip resistance test shall be performed for the physical property test. If a manufacturing certificate is not provided with the submittal, the brick paver shall be tested per the ASTM C 902 and other testing standards specified herein to verify for all the physical requirements. The City Engineer has the right to order any additional tests to verify the physical properties of the material or product.

3-6.3 Concrete Pavers.

(a) Concrete pavers shall be uncoated and non-effloresced paver conforming to the requirements as specified in ASTM C 936 and shall have a minimum thickness of 2 3/8 inches.

(b) Concrete pavers shall have minimum compressive strength of 8,000 psi, maximum water absorption rate of 5% and weathering index less than 50 when tested with ASTM C 140.

(c) Concrete pavers shall have a minimum abrasion resistance of 35 when tested with modified ASTM C 241, minimum abrasion wear value of 35 when tested with ASTM C 501, or maximum abrasion volume loss of 0.92 in^3/7.75 in^2 (or a thickness loss not more than 1/8 inch) when tested per ASTM C 418.

(d) Concrete pavers shall be within the allowable dimensional tolerances as described in ASTM C 936.

(e) Polymer adhesive for the concrete pavers shall not be used without the environmental conditioning test and the approval the City Engineer.

(f) Concrete pavers shall be constructed in 90-degree Herringbone pattern.

(g) The concrete pavers shall meet the required minimum coefficient of friction as specified hereinbefore and after the abrasion resistance test has been completed.

(h) If a manufacturing certificate is submitted with all the required physical property data and the data conform with the requirements specified herein, only the abrasion wear test and

L.A.C.E. INDEX

the slip resistance test shall be performed for the physical property test. If a manufacturing certificate is not provided with the submittal, the concrete paver shall be tested per the ASTM C 936 and other testing standards specified herein to verify for all the physical requirements.

3-6.4 Granite, Sandstone, Marble and Limestone Pavers.

3-6.4.1 General.

(a) All granite, sandstone, marble pavers including limestone pavers shall be natural stones and for exterior application, in accordance with ASTM C 119-Standard Terminology Relating To Dimension Stone, that are sawed, cut, split and shall exclude molded, cast, or artificially aggregated nits composed of fragments and crushed or broken. Unless otherwise specified, all pavers shall have a minimum thickness of 1 ¼ inch. All pavers shall be submitted with a Quarry Certificate indicating the physical properties of the materials to the City Engineer for review and approval. The physical properties of the materials shall conform to the minimum physical properties specified herein. Abrasion resistance wear test and slip resistance test shall be performed for the physical property test. If a Quarry Certificate is not provided, the material or product shall be tested per the ASTM C 615-Standard Specification for Granite Dimension Stone, ASTM C 616-Standard Specification For Quartz-Based Dimension Stone, ASTM C 1526-Standard Specification for Serpentine Dimension Stone, ASTM C 1527-Standard Specifications for Travertine Dimension Stone or ASTM C 568-Standard Specification for Limestone Dimension Stone, whichever is applicable, to verify the physical requirements.

(b) If requested by the City Engineer, the pavers shall be tested for compressive strengths per ASTM C 170.

3-6.4.2 Granite.

(a) Granite paver shall be vitreous type and have minimum compressive strength of 19,000 psi when tested per ASTM C 170, maximum absorption rate of 0.4% when tested with ASTM C 97, and shall have minimum abrasion resistance or wear value of 75 conforming to ASTM C 501 when tested with ASTM C 241 or C 1353, or maximum abrasion volume loss of 0.92 in^3/ 7.75 in^2 (or a thickness loss not more than 1/8 inch) when tested per ASTM C 418.

L.A.C.E.
INDEX

3-6.4.3 Sandstone.

(a) Sandstone pavers shall be either Type II Quartzitic Sandstone or Type III Quartzite Sandstone with minimum compressive strength of 10,000 psi or 20,000 psi, respectively,

when tested per ASTM C 170; maximum absorption rate of 3% and 1%, respectively, when tested per ASTM C 97. All sandstone pavers shall have a minimum 1½ inch thickness and shall conform to ASTM C 616 and have minimum abrasion resistance value (Ha) or wear valve of 18.5 when tested per ASTM C 241.

3-6.4.4 Marble and Limestone.

(a) Marble pavers shall be Class III Serpentine or Class IV Travertine marble as defined in ASTM C 119-Definitions of Terms Relating to Dimension Stone or have Marble Soundness Classification of Group C in accordance with the Marble Institute of America (28901 Clemens Road, Suite 100, Cleveland, Ohio 44145, http://www.marble-institute.com), or better. Class III Serpentine or Class IV Travertine marble is also referred to as limestone with equitable class as defined in ASTM C 568.

(b) Class III Serpentine and Class IV Travertine Marble Pavers. Class III Serpentine and Class Travertine marble pavers shall have the following properties in conformance with ASTM C 1526 and C 1527, respectively.

(1) Class III Serpentine and Class IV Travertine marble pavers shall have minimum compressive strengths of 10,000 psi and 7,500 psi when tested with ASTM C 170, and maximum water absorption rate of 0.2% and 2.5% when tested with ASTM C 241, respectively. Class III Serpentine and Class IV marble pavers shall have minimum thickness of 1 1/4 inches and with minimum abrasion resistance value (Ha) of 12.0 when tested per ASTM C 241.

(c) Limestone other than those indicated above shall be minimum Class III high density limestone as defined in ASTM C 568. Class III high density limestone shall have a minimum thickness of 1 ¼ inches, minimum compressive strengths of 8,000 psi when tested with ASTM C 170, maximum water absorption rate of 3.0% when tested with ASTM C 97 and minimum abrasion resistance value (Ha) of 12.0 when tested per ASTM C 241.

L.A.C.E.
INDEX

3-6.5 Performance and Durability Test.

In addition to the physical property tests as indicated herein, all pavers shall be tested in accordance with requirements indicated below unless otherwise specified. All testing specimens shall be made in accordance with the approved installation details and/or specified testing standards. Unless otherwise specified, all specimens shall have rigid concrete pavement support with minimum thickness as specified in 3-6.1(f), and approved mortar base or adhesive material.

(a) Impact load test in accordance with 3-2.3.3 hereinbefore. Unless otherwise specified, the

impact load shall be minimum 24 ft-lb by a metal weight having "B" Tup.

(b) Bond Strength or Adhesive Test in accordance with 3-5.3(a)(2)iv with sample size as described in the ASTM C 482 or C 1583 standards. If polymer adhesive is used as bonding and grout joint material, perform bond strength or adhesive test with specimens exposed to environment conditionings per 3-5.3(a)(1).

(c) Paver and Grout Joint Performance Test in accordance with modified ASTM C 627 with 300 lbs weight per each steel weight for a total of 450 cycles. No chippage of tile or paver and any grout joint loss along the wheel path shall exceed 3.0%. Unless otherwise directed by the City Engineer, any installation of tile or paver located in residential area or local street, and commercial area or non-local street with a total combined area of less than 50 sq. ft. and 100 sq. ft., respectively, shall be exempted from the paver and grout joint performance test. This exemption is not applicable to the materials or products made with exposed aggregates.

1. THESE SIGNS ARE IN ADDITION TO THOSE REQUIRED BY, AND SHALL CONFORM TO, THE PROVISIONS OF THE LATEST ADOPTED EDITION OF THE "WORK AREA TRAFFIC CONTROL HANDBOOK" (**WATCH**).

2. ALL SIGN AND PLATE PANELS SHALL CONSIST OF HIGH QUALITY REFLECTORIZED SHEETING APPLIED TO A BASE OF ALUMINUM OR PLYWOOD. BASE MATERIAL SHALL BE EXTERIOR GRADE PLYWOOD NOT LESS THAN 3/8 INCH THICK OR SHEET ALUMINUM NOT LESS THAN 0.063 INCH THICK FOR WIDTHS UP TO 42 INCHES AND NOT LESS THAN 0.080 INCH THICK FOR WIDTHS GREATER THAN 42 INCHES. ALL PANELS SHALL BE THE PRODUCT OF A COMMERICIAL TRAFFIC SIGN MANUFACTURER.

3. SIGN PANELS SHALL FACE AND BE VISIBLE TO ONCOMING TRAFFIC AND BE SECURELY FASTENED TO POSTS WITH COMMERICIAL BOLTS, NUTS AND WASHERS SO AS TO RESIST DISPLACEMENT.

▽1 4. THE SIGNS SHALL BE PLACED AT LEAST **7** DAYS BEFORE START OF CONSTRUCTION. PRIOR TO INSTALLATION OF ANY SIGNS, THE CONTRACTOR SHALL HAVE APPLICABLE INSURANCE ON FILE WITH THE CITY ATTORNEY'S OFFICE. UNLESS OTHERWISE SPECIFIED ON THE PLANS, THE SIGNS SHALL BE PLACED AS FOLLOWS:

   A. **C18 SIGNS** SHALL BE PLACED AT THE BEGINNING OF THE WORK AND ONE PER BLOCK WITHIN THE LIMITS OF THE WORK. HOWEVER, NO TWO SUCCESSIVE SIGNS SHALL BE SPACED GREATER THAN 1000 FEET APART. **C18 SIGNS** SHALL ALSO BE PLACED ON CROSS STREETS ONE BLOCK PRECEEDING THE WORK.

   B. **C13 SIGNS** SHALL BE PLACED AT THE END OF THE WORK.

   C. WHEN A STREET CLOSURE IS ALLOWED, **C19 SIGNS** SHALL BE PLACED AS SPECIFIED FOR **C18 SIGNS.**

   D. THE **CREDIT SIGN** SHALL BE PLACED 100 FEET IN ADVANCE OF BEGINNING OF WORK, TWO SIGNS IF WORK INVOLVES BOTH SIDES OF STREET. **CREDIT SIGNS** SHALL BE REQUIRED ON ALL PROJECTS EXCEPT PERMIT PROJECTS. SEE PLANS FOR TYPE AND NAMES.

   E. THE COMBINATION **TIME AND INFORMATION SIGN** SHALL BE PLACED **20** FEET BEHIND THE FIRST **C18 SIGN** AND 20 FEET BEHIND ALL **C13 SIGNS** AND **C19 SIGNS.**

5. FOR CASH AND ASSESSMENT ACT CONTRACTS, THE INFORMATION TELEPHONE NUMBER SHALL BE THE NUMBER OF THE DESIGN OFFICE SPECIFIED ON THE PROJECT PLANS. FOR PERMIT PROJECTS, IT SHALL BE THE NUMBER OF THE PERMITTEE OR ITS RESPONSIBLE DESIGNEE. FOR PROJECTS PERFORMED BY CITY FORCES, THE TELEPHONE NUMBER SHALL BE THAT OF THE BUREAU PERFORMING THE WORK.

▽1 6. FOR WORDING OF THE **TIME SIGN**, CONTACT THE ENGINEER, THE PERMITTEE OR THE RESPONSIBLE DESIGNEE.

7. ALL COSTS INCURRED IN FURNISHING, INSTALLING, MAINTAINING, AND REMOVING THE SIGNS SHALL BE INCLUDED IN OTHER ITEMS FOR WHICH BIDS ARE ENTERED.

▽1 8. SIGNS AT THE BEGINNING AND END OF THE PROJECT SHALL BE LOCATED CLOSE TO, BUT SHALL NOT INTERFERE WITH, THE CONSTRUCTION.

Addendum No. 1

August 25, 2022

ENGINEERING
CITY OF LOS ANGELES

TED ALLEN, PE
CITY ENGINEER

Sixth Street Viaduct – Park, Arts, and River Connectivity (PARC) Improvements; Department of Cultural Affairs LA Hands Art Piece Foundations; and CBD Sewer Rehab Unit 11A – 6th Street Siphon to Santa Fe Avenue
W.O. E700235F & SZC14224

Bidders are required to acknowledge receipt of this addendum in the space provided on page 1-4 of the Bid Proposal. This addendum consists of this two-page transmittal and 4 attachments totaling 21 pages.

Bidders are hereby notified of the following changes:

I. MODIFICATIONS TO BID PROPOSAL:

1. Important Notice Section C, found in Part I of the Bid Proposal, **should read as follows**:

"C. JOB WALK

A job walk will be conducted by the Project Manager to familiarize bidders with the existing conditions that may affect the bids. The job walk will be held September 1, 2022 at 10:00 a.m. at 589 S. Santa Fe Avenue, Los Angeles, CA 90013."

2. The **City Engineer's Estimate** for this project has changed from $36,839,023.00 to **$36,979,003.00.**

3. **Replace** the Table of Contents in Part I of the Bid Proposal with the ***attached revised*** Table of Contents (3 pages).

4. **All** references to "CBD Sewer Rehab Unit 11A – 6th Street Siphon to Santa Fe Avenue" will be understood to be the same as "Central Business District (CBD) Sewer Rehab Unit 11A – 6th Street Siphon to Santa Fe Avenue"

II. MODIFICATIONS TO SPECIFICATIONS:

1. **Replace** the following section in the Specifications: Department of Cultural Affairs LA Hands Art Piece Foundations – General Requirements Section 01212 with the ***attached revised*** Section 01212. (W.O. E700235F) (1 page).

2. **Replace** the following section in the Specifications: Department of Cultural Affairs LA Hands Art Piece Foundations – General Requirements Section 01280 with the ***attached revised*** Section 01280 (W.O. E700235F) (3 pages).

Sixth Street Viaduct – Park, Arts, and River Connectivity (PARC) Improvements; Department of Cultural Affairs LA Hands Art Piece Foundations; and CBD Sewer Rehab Unit 11A – 6th Street Siphon to Santa Fe Avenue
W.O. E700235F & SZC14224

3. **Replace** the following section in the Specifications: Sixth Street Viaduct – Park, Arts, and River Connectivity (PARC) Improvements – General Requirements Section 01721 with the ***attached revised*** Section 01721 (W.O. E700235F) (12 pages).

SECTION 01212
FIXED CASH ALLOWANCE ITEMS

1.1 THE REQUIREMENT

A. A fixed cash allowance has been allocated to each of the following items of the Bid Breakdown (see Bid Proposal). Requirements for each Fixed Cash Allowance Item are specified in the GENERAL REQUIREMENTS (GR) section referenced below. Overhead and Profit, at the rates listed below, shall be added to the actual invoiced amount.

Bid Item No.	Description	Overhead and Profit
30.	Allowance to furnish all labor, tools, equipment, and materials for the installation of accent lighting for the two (2) art pieces (by ARTIST) (GR Section 01112)	Per Sec. 01254

B. If these items are not executed, or are only partially executed, or the allowance for any item is not expended or partially expended, then a deductive Change Order shall be issued for the amount that is not expended. If, however, these items are over expended (with ENGINEER'S prior approval), then an appropriate Change Order shall be executed in accordance with the provisions of the GENERAL REQUIREMENTS Section 01254 –- CHANGE ORDERS, except for Overhead and Profit wherein the above listed rates shall apply.

(END OF SECTION)

SECTION 01280
MEASUREMENT AND PAYMENT

PART 1 - GENERAL

1.01 PAYMENT

A. Upon Contract award, the accepted Schedule of Work and Prices shall become the Payment Schedule. Payment for Work under the Contract shall be made at the unit prices listed in the Payment Schedule. For lump sum bid items, payment shall be made in accordance with Section 01298.

B. Payment for the measured quantities of Work performed shall be considered full compensation for all of the CONTRACTOR's costs associated with the performance of the Work. These costs comprise direct labor, materials, tools, equipment, transportation, supplies, incidentals, and subcontract Work; and indirect costs such as field and home office overhead, consulting and design services, establishment, operation and removal of general plant, taxes, insurance, permits, bond, profit, and contingencies for the performance of all Work specified.

C. The costs for conforming to the requirements for measuring quantities shall be considered included in the fixed, unit, or lump-sum prices paid for the quantities being measured, and no additional compensation will be made therefore.

D. Except for items subject to the Variation in Quantities clause, the unit prices listed in the Payment Schedule shall be applicable for calculating the amount payable under each item of the Schedule. Estimated quantities indicated in the Payment Schedule are for bidding purposes only. Payment will be determined by actual measured quantities of the Work installed/performed as verified by the INSPECTOR.

E. Work specified or shown on the drawings for which the Payment Schedule does not provide a separate lump sum or unit price is considered incidental and is not separately paid. The cost for such Work is compensated in the prices bid for other Work items and no additional compensation shall be allowed.

1.02 MEASUREMENT OF QUANTITIES

A. Measure quantities in accordance with standard industry practice and as specified herein. The CITY will verify measurements. Measure quantities to the nearest whole number of units. Round down fractional units less than one-half; round up fractional units one-half or greater.

1. Measure sewer debris volumes by weight as described herein.

2. Measure areas in two mutually perpendicular axes in the plane of the surface being measured.

3. Measure linear quantities along the longitudinal centerline of the item, except as otherwise specified.

B. Measurement of a lump sum item shall be for the entire item, unit of Work, structure, or combination thereof, as listed or indicated in the Payment Schedule, except as otherwise

specified. Progress payments for lump sum items in the Payment Schedule shall be made in accordance with Section 01298.

C. Determine quantities of Work performed for payment purposes and submit them to the INSPECTOR for approval. Assist the INSPECTOR in the taking of measurements by providing equipment, workers, and survey crews as required to verify quantities in accordance with the provisions for measurement specified herein.

1.03 REJECTED, EXCESS, AND WASTED MATERIALS

A. The following shall not be measured for payment:

1. Quantities of material wasted or otherwise disposed.

2. Rejected loads of material, including material rejected after it has been placed for failure to comply with specified requirements.

3. Material remaining on the transporting vehicle or in the pipeline.

4. Muck material not removed from designated location.

5. Material placed outside specified or indicated lines or limits.

6. Material not incorporated into the Work.

7. Material remaining on hand after completion of the Work.

B. No payment will be made for loading, hauling, and disposing of rejected material.

1.04 PAYMENT SCHEDULE FOR LA HANDS ART SCULPTURE FOUNDATIONS

A. **BID ITEM 29: Art Piece Foundation and Pedestal** (Lump Sum)

1. This lump sum bid item compensates the CONTRACTOR for the necessary labor, tools, equipment and materials for the construction of two (2) foundations and pedestals. Installation of the ARTWORK is by other (refer to Sections 01112 and 01120 for more information).

B. **BID ITEM 30: Allowance Items**

1. Allowance items have been established in the Bid Schedule to compensate the CONTRACTOR for the cost of performing such items as the CITY may require for the construction of the Work, but for which it is impracticable to ascertain the scope prior to bid. If the total cost compensable under each allowance item differs from the amount set forth in the SCHEDULE OF WORK AND PRICES, the Contract Price shall be adjusted by a Change Order for the difference between the total actual costs and the allowance amount as an additional amount due the CONTRACTOR or a credit to the CITY, as appropriate.

2. Reimbursement for all allowance items shall be as determined by Section 01212.

3. The allowance items are as follows:

a. **Bid Item 30: Allowance for Art Piece Accent Lighting**

This allowance shall be used to compensate the CONTRACTOR for the necessary labor, tools, equipment and materials for the installation of electrical conduit, wiring, and accent lighting fixture(s) for each art piece. For further details refer to section 01112.

(END OF SECTION)

SECTION 01721
MOBILIZATION

1.1 THE REQUIREMENT

A. General

Whether Mobilization is included as a Contract Bid Item in the Bid Proposal Form or specified as part of the lump sum in the Contract Documents, the cost of labor, equipment, materials and incidentals for doing all the work in mobilization (in advance of construction operations and not directly attributable to any specific bid item) shall be included in the Contract Price Breakdown and progress payment estimate. If there is no mobilization bid item the CONTRACTOR shall submit to the INSPECTOR for approval the Contract Price Breakdown with the amount established for mobilization.

Mobilization shall include, but not be limited to, the following items, all as required for the proper performance and completion of the Work:

1. Obtaining all permits, licenses, insurance, and bonds. Providing copies to the ENGINEER.

2. Moving onto the Jobsite all of CONTRACTOR'S plant and equipment as required.

3. Erecting temporary buildings and other construction facilities.

4. Installing temporary construction power and wiring.

5. Establishing fire protection system for its temporary facilities.

6. Developing construction water supply.

7. Providing field office trailers for the CONTRACTOR, complete with all specified equipment, furnishings and utility services.

8. Providing sanitary facilities or connecting to onsite sanitary facilities as specified.

9. Providing for potable water facilities as specified. This includes a means by which all on site CONTRACTOR, Subcontractor or supplier personnel can wash their hands with soap.

10. Arranging for, and erection of, CONTRACTOR'S work and storage yards and sheds.

11. Submitting all required Subcontractor insurance certificates and bonds.

12. Posting all CAL/OSHA required notices and establishment of safety programs.

13. Having the CONTRACTOR'S representative at the Jobsite full time.

14. Furnishing of Construction Schedule, Contract Price Breakdown and Submittal Schedules.

15. Erecting all temporary fencing including removal and disposal of existing temporary fencing.

16. Erecting CONTRACTOR signs. The names, addresses, and specialties of CONTRACTORS, subcontractors, engineers or architects may be displayed on removable signs. The size and location shall be subject to the ENGINEER'S approval. Commercial advertising matter shall not be attached to or painted on the surfaces of buildings, fences, canopies or barricades.

17. Installing Building Credit signs and Advance Construction Notice signs. The Building Credit sign shall be submitted to the ENGINEER for approval prior to installation. Refer to GR Section 01581 – Project Signs, for additional requirements.

18. Providing an air-conditioned meeting room with a conference table, a minimum of 10 chairs and utilities for construction meetings within the ENGINEER'S field office.

19. Furnishing and set up of separate field office(s) for the ENGINEER and INSPECTOR. If it is necessary to relocate the ENGINEER'S or INSPECTOR'S job office to a new facility or relocation during the Contract provide the required labor and equipment at no additional cost. The new facility shall be properly equipped and conform to the requirements shown in Subsection B.2, Field Offices herein. The CONTRACTOR shall obtain the ENGINEER'S approval of the new location thirty (30) days in advance.

B. Field Offices For The Inspector And The Engineer

1. Unless specified otherwise, the CONTRACTOR shall, at no cost to the CITY, furnish, install, maintain, and remove all temporary light, telephone, power and water (including piping, wiring, lamps and other equipment necessary for the field offices).

2. The CONTRACTOR shall furnish the ENGINEER and the INSPECTOR, for the duration of the contract, and through the STARTUP ASSISTANCE period, at no additional cost to the CITY furnished field offices with janitorial services and maintenance agreements for all equipment provided under this Section. The offices shall have a minimum floor space of 720 square feet, door(s), and windows. All exterior doors and windows shall be provided with screens. All exterior doors shall be provided with door handles with double dead bolt locks and the CONTRACTOR shall provide the INSPECTOR and ENGINEER keys as requested by the INSPECTOR and ENGINEER. Each field office shall be furnished as follows:

   a. ENGINEER and INSPECTOR'S offices: 1 - 12' conference table, 14 - padded folding chairs (10 minimum for conference table), 1 - 6' folding table, 2 - L-shaped office desks with a minimum of 30 square feet of work surface, 2 - office chairs (adjustable height

and armrests, reclining), 1 - plan rack, 1 - plan table (minimum 42"H 34"Wx72"L work surface. Contractor may build onsite. Work surface shall be smooth, 3/4-inch medium density fiberboard (MDF) with finish trim on all edges. Provide storage shelves under plan counter), 2 - 4-drawer filing cabinets suitable to hold letter or legal size hanging file folders, 2 - book shelves with minimum of 4 adjustable shelves, and 3 - 36"x48" minimum white boards (or dry erase wallpaper).

b. ENGINEER'S Equipment: 2 - 27" minimum computer monitors with at least 1 HDMI port, 2 - laptops (15" min display, Windows 10 minimum, Intel processor, 16GB RAM minimum, 1TB HD minimum, WiFi, Bluetooth, HDMI port, USB port, USB-C port, built in webcam & speakers, Internet Security software), 2 - Bluetooth computer mouse, 2 - Bluebeam Revu licenses (latest version), and 1 - Color printer/copier/scanner with WiFi capable of printing and scanning 11x17 documents. Maintenance, paper (letter and tabloid sizes) and ink to be provided throughout the duration of the contract.

c. Heating and air conditioning of sufficient capacity shall be provided at no expense to the CITY to adequately control the temperature at all times.

d. Bottled drinking water shall be provided within the office. Sanitary facilities shall be provided directly adjoining the office for the sole use of the ENGINEER and the INSPECTOR. Sanitary facilities shall include a toilet and wash basin with hot and cold running water.

e. Extended area, non-coin operated telephone service shall be provided within the office area. The installation shall include 1 - individual telephone lines and 1 - cordless telephone for each Section.

f. 12 - Duplex convenience outlets for electrical power a minimum of four per staff person.

g. Outdoor lighting fixtures with 300 Watt bulb to effectively light the area around the office facility.

h. Maintenance and service agreements for all office equipment during the contract period.

i. The CONTRACTOR shall provide janitorial services weekly for the field offices for the duration of the Contract Work.

j. Any computer equipment or software furnished under this section or under an Allowance for City Field Offices shall be the property of the City at the end of the project.

k. The CONTRACTOR shall provide a high speed internet connection for the duration of the Contract and through the start up assistance period.

C. Temporary Construction Utilities

1. Construction Water:

a. Potable water will be made available for the CONTRACTOR'S use from the existing fire hydrant system, as located on the Plans, or as directed by the ENGINEER. The CONTRACTOR shall meter water usage and pay for the cost of water consumption. The CONTRACTOR shall make arrangements with the servicing water utility company. A backflow preventer shall be provided as per the Plumbing Code.

2. Construction Power:

a. The CONTRACTOR shall provide all electrical power required in performance of the Work and shall pay all installation charges and monthly bills in connection therewith. The CONTRACTOR shall provide and maintain all temporary and permanent power. The CONTRACTOR shall pay for all permits. All temporary connections for electricity shall be subject to approval of the ENGINEER and the power company representative, and shall be removed in like manner at the CONTRACTOR'S expense prior to final acceptance of the Work.

3. Telephones:

a. The CONTRACTOR shall provide and maintain at all times during the progress of the Work, at its own expense, not less than three (3) telephones in good working order, at its own field construction office. Each such telephone shall be connected to an established exchange for toll service and with all other telephones utilized by the CONTRACTOR.

4. Temporary Ventilation:

a. The CONTRACTOR shall provide adequate means to furnish temporary ventilation within Work areas at CONTRACTOR'S own expense and conforming to applicable requirements and standards of Federal, State, County and the 2020 Los Angeles CITY Building Codes and Amendments.

D. Contractor's Temporary Storage Facilities

1. The CONTRACTOR shall provide an adequate temporary shed on the site in a location designated by the ENGINEER for the safe storage of material and equipment. The shed shall be weathertight with a wood floor above grade. The shed shall be removed upon completion of the Work, or when so ordered by the ENGINEER.

E. Sanitary Facilities

1. The CONTRACTOR shall provide adequate sanitary conveniences of an approved type for the use of persons employed on the Work, and properly secluded from public observation, shall be provided and maintained by the CONTRACTOR in such a manner and at such points as shall be required or approved by the INSPECTOR. These conveniences shall be maintained at all times without nuisances and their use shall be strictly enforced. Upon completion of the Contracted Work, they shall be removed from the premises, leaving the premises clean and free from a nuisance.

F. Job Bulletin Board

1. The CONTRACTOR shall provide and mount on the CONTRACTOR'S Field Office, where it can be readily seen by the CONTRACTOR'S employees, a substantially built 3-feet high x 4-feet wide bulletin board, with a framed glass door protected on the outside with a 2-inch x 2-inch galvanized mesh and lock.

G. Protection Enclosures

1. Precautions shall be exercised by the CONTRACTOR at all times for the protection of persons and property.

2. CONTRACTOR shall furnish (or cause to be furnished) and maintain for the duration of Contracted Work, all scaffolds, covers, tarpaulins, canopies, warning signs, steps, bridges and other temporary construction and other protective devices as required by the INSPECTOR and the Local and State Rules, Ordinances and/or Regulations necessary for protection of public and private property and public safety.

3. Such enclosures shall be of reasonably good appearance and shall be maintained free of signs, posters, writing, markings and any other thing which would detract from a reasonably good appearance.

H. Temporary Fencing and Gates

1. Provide and maintain for the duration of the Contracted Work temporary chain link fencing of design and type needed to prevent entry onto the Jobsite and exterior Work area by the public. The CONTRACTOR may utilize the existing temporary chain link fence furnished by the CITY. The CONTRACTOR may provide additional chain link fencing, or modify the existing chain link fence, where necessary to seal any openings to the Jobsite.

2. Construction shall conform to the 2020 Los Angeles City Building Codes and Amendments where adjacent to any public way.

3. Chain Link Fence:

a. Where required, conform to the 2020 Los Angeles City Building Codes and Amendments and Standard Specifications for Public Works Construction.

b. Provide an approved 8-foot high chain link fence. All vertical poles and horizontal rails, tension bars, etc. shall be in conformance with the Standard Specifications for Public Works Construction.

4. Chain Link Fence with an Opening Along Property Lines:

a. Provide an approved 8-foot high chain link fence and gate with metal supports along the property lines and/or at openings to prevent access to the Jobsite.

5. Chain Link Fence Outside Of Property Lines:

a. CONTRACTOR shall obtain all necessary written approvals from the ENGINEER and the local authorities having jurisdiction prior to erecting and temporary chain link fencing. CONTRACTOR shall remove all chain link fencing and repair all sidewalks or existing improvements after completion of Contract.

I. Plan Box

1. CONTRACTOR shall provide a plan box to store a full set of contract drawings and the project manual for the duration of the project. The box shall be of the appropriate size to contain the contract drawings and the project manual, and shall be temporary, weather tight, and include a cover, lock, and proper identification.

J. Construction Sign

1. Design: Refer to Section 01581 – PROJECT SIGNS.

2. Materials:

a. Posts: 4-inch x 6-inch redwood, C.R.A. Foundation grade.

b. Frame: Douglas fir solid stock, W.C.L.B., and Better, V.G. Finish.

c. Metal Panel: No. 22 gauge sheet steel.

d. CITY Seal: Provided by ENGINEER.

3. Fabrication:

a. Securely attach frame to posts with adequate fasteners.

b. Miter and nail frames, conceal fastenings and set nails.

c. Secure a sheet metal panel to frame with wood stops as indicated on the Contract Documents.

4. Painting:

   a. By sign painters.

   b. On all surfaces of posts, panel and frame, 1 coat of primer and 1 coat of finish paint on concealed surfaces not glued; 1 coat of primer and 2 coats of finish paint on exposed surfaces, and anti-graffiti coating.

   c. With exterior wood primer and exterior oil paint as specified in Section 09900.

   d. White finish on all surfaces; black letters and black frames reveal.

5. Installation:

   a. Set posts into natural ground; location as directed by the ENGINEER.

6. Removal:

   a. Upon completion of Contracted Work or when directed by the ENGINEER.

7. Modifications:

   a. During the course of the Contract, the CONTRACTOR may be required to make changes to lettering, as directed by the ENGINEER, up to forty (40) letters regardless of the letter size, without additional cost to the CITY.

   b. Repair and recoat the modified area in a manner that will eliminate the evidence of the changes.

K. Permits

1. The CONTRACTOR shall be responsible for obtaining and paying for all permits, licenses and fees in a timely manner, in accordance with Section 00217 of the General Conditions. The CONTRACTOR shall be aware of the expiration date of all permits, plan checks and/or extensions when the ENGINEER turns over such documents to the CONTRACTOR for construction use. If the CONTRACTOR does not obtain the permits in a timely manner, the CONTRACTOR shall be responsible for the delay, and the additional cost incurred as a result of the delay, in obtaining and paying for the permits or licenses (such as costs to re-plan check, plan modification due to code changes, etc).

2. The CONTRACTOR shall be familiar with all aspects of the Project. For the Project which requires a haul route hearing and haul route bonding as part of the Grading Permit approval process, CONTRACTOR shall

prepare and secure the Grading Permit as soon as the construction contract is awarded in order to mitigate any possible delays due to the haul route hearing, The haul route map preparations shall be as required by the Los Angeles CITY Department of Building and Safety, Grading Division, and Section 02220 – EARTHWORK of the Project Manual.

3. The CONTRACTOR shall obtain and pay for the following:

   a. Permits to Use Street Space and Deposit Building Materials

   b. Sewer Connection Permit

   c. Grading Permit

   d. Plumbing Permit

   e. Demolition Permit

   f. Heating, Ventilating, Air Conditioning

   g. Electrical Permit

   h. Fire Protection Permit for Fire Alarm System

   i. Shoring Permit

   j. Sign Permit

   k. Lead-Based Paint, Contaminated Soil Removal Notification Permit

   l. California General Construction Activity Stormwater Permit and Stormwater Pollution Prevention Plant (SWPPP) for stormwater pollution control measures for construction activities

   m. California Department of Transportation Permits (CITY will submit for plan check and pay for owner's permit. CONTRACTOR shall submit and pay for work permit)

   n. Work adjacent to and parallel to the railroad tracks will require coordination with Metro or appropriate agency. Flag men may be required during grading operations and other work deemed by Metro of having a possibility to foul the tracks. Contractor shall be responsible for all coordination with Metro, including but not limited to obtaining any required permits, paying any required fees, and paying all flagging costs.

L. Utility Services Connections

1. Within five (5) days after the Notice-to-Proceed, notify the serving utilities that the Project is under construction and furnish them dates on which

the services will be required. Furnish the ENGINEER a duplicate copy of all service requests.

2. Should any major changes to the Work indicated be necessary to complete the utility installation, notify the ENGINEER in writing at once and cease all the Work affected until approval for the required modifications has been obtained from the ENGINEER.

3. Water Service Connections: Make all arrangements with the proper authorities for the domestic water service, including the check valve and vault installations. See Civil Utility Sheets for coordination. The CONTRACTOR will pay for all fees and charges. Construction water is to be separately arranged and paid for by the CONTRACTOR. CONTRACTOR shall contact Los Angeles Department of Water and Power at 1-800-499-8840. If the CONTRACTOR uses an existing water supply for construction the billing shall be transferred to the CONTRACTOR prior to the start of construction. A duplicate of the transfer documentation shall be provided to the ENGINEER.

4. Power Service Connections: Make all arrangements with the proper authorities for the new power service connections and testing of electrical equipment and control as part of the contract. See Electrical (E) Sheets for coordination. The CONTRACTOR will pay for all fees and charges. Power for construction and testing equipment to be separately arranged and paid for by the CONTRACTOR. The CONTRACTOR shall contact Los Angeles Department of Water and Power at 1-800-499-8840.

5. Telephone Service Connections: Make all arrangements with the proper authorities for the telephone system connections to nearest telephone service manhole or pole of the serving agency as part of the Contract, see Electrical Sheets for coordination. The CONTRACTOR will pay for all fees and charges. Construction telephones to be separately arranged and paid for by the CONTRACTOR. The CONTRACTOR shall be responsible for all coordination with the local utility provider.

7. After all utility services are completed, all street improvements shall be repaired. CONTRACTOR shall include in the contract and pay for street damage restoration fee as indicated in Section 02510 - YARD WORK AND STREET WORK and attachment shown herein.

8. If the CONTRACTOR is delayed during the inspections by local authorized agencies or work by utility companies, not the fault of the CONTRACTOR and a critical path is impacted, the CONTRACTOR shall be entitled to a non-compensable time extension and shall have no claim for any other compensation for such delay.

Addendum No. 2

August 26, 2022

ENGINEERING
CITY OF LOS ANGELES

TED ALLEN, PE
CITY ENGINEER

Sixth Street Viaduct – Park, Arts, and River Connectivity (PARC) Improvements; Department of Cultural Affairs LA Hands Art Piece Foundations; and CBD Sewer Rehab Unit 11A – 6th Street Siphon to Santa Fe Avenue
W.O. E700235F & SZC14224

Bidders are required to acknowledge receipt of this addendum in the space provided on page 1-4 of the Bid Proposal. This addendum consists of this one-page transmittal and 1 attachment totaling 4 pages.

Bidders are hereby notified of the following changes:

I. MODIFICATIONS TO BID PROPOSAL:

1. **Replace** the **Schedule of Work and Prices** in **Part I** of the Bid Proposal with **attached revised Schedule of Work and Prices** (3 Pages).

   FAILURE BY THE BIDDER TO COMPLETE AND SUBMIT THE ATTACHED SCHEDULE OF WORK AND PRICES SPECIFIED HEREIN MAY RESULT IN THE BOARD OF PUBLIC WORKS DECLARING THE BID NON-RESPONSIVE.

2. There was no change on **City Engineer's Estimate**.

Sincerely,

Digitally signed by Jonathan Carroll

PROJECT LABOR AGREEMENT
CITY OF LOS ANGELES

DEPARTMENT OF PUBLIC WORKS

INTRODUCTION AND FINDINGS

The purpose of this Project Labor Agreement ("Agreement") is to promote efficiency of construction operations during the construction of various projects within the Public Works' Capital Improvement Program (CIP) and provide for the orderly settlement of labor disputes and grievances without strikes or lockouts, thereby promoting the public interest in assuring timely and economical completion of these Projects.

WHEREAS, the Department of Public Works (DPW) is responsible for construction, renovation, maintenance and operation of City of Los Angeles (City) facilities and infrastructure, including capital improvement projects for major public facilities and systems throughout the City; and

WHEREAS, the safe, timely and successful completion of these projects with a trained workforce is of utmost importance to the DPW and the general public in the City; and

WHEREAS, the work to be done will require maximum cooperation from the many Parties who will be involved; and

WHEREAS, it is recognized that projects of a certain magnitude with multiple contractors and bargaining units on the job site at the same time over an extended period of time create the potential for work disruption without there being an overriding commitment to maintain continuity of work; and

WHEREAS, the interests of the general public, the City, the Unions, contractors, subcontractors, employers and workers would be best served if the construction work

proceeded in an orderly manner free of disruption because of strikes, sympathy strikes, work stoppages, picketing, lockout, slowdowns or other interferences with work; and

WHEREAS, large numbers of workers of various skills will be required in the performance of the construction work, including those to be represented by the Unions affiliated with the Los Angeles/Orange Counties Building and Construction Trades Council and any other craft labor organization which are signatory to this Agreement, employed by contractors and subcontractors who are signatory to agreements with said labor organizations; and

WHEREAS, the Contractor/Subcontractor/Employer(s) (C/S/E) and the Unions desire to mutually establish and stabilize wages, hours and working conditions for the workers employed on these Projects by the C/S/Es, and further, to encourage close cooperation among the C/S/Es, and the Unions to the end that a satisfactory, continuous and harmonious relationship will exist among the Parties to this Agreement; and

WHEREAS, this Agreement is not intended to replace, interfere with, abrogate, diminish, or modify existing local or national collective bargaining agreements in effect during the duration of this Agreement, insofar as a legally binding agreement exists between the C/S/Es and the affected Unions, except to the extent that the provisions of this Agreement are inconsistent with said collective bargaining agreements, in which event, the provisions of this Agreement shall prevail; and further, it is understood that C/S/Es are bound and shall remain bound, for the duration of this Agreement by the terms of this Agreement and applicable local and national collective bargaining agreements for the craft work performed, established between the signatory Unions and C/S/Es, in effect and covering the area of these Projects; and

WHEREAS, this Agreement is not intended to have an adverse impact on the policy of the City to maximize business opportunities for minority, women and other business enterprises in City contracts; and

WHEREAS, increasing access to employment opportunities with prevailing wages is one way for the City to directly combat poverty and stimulate economic reinvestment; and

WHEREAS, the City has adopted the City Contractor's Use of Criminal History for Consideration of Employment Applications Ordinance to help ensure a discrimination-free, diverse and equitable hiring environment; and

WHEREAS, the DPW has adopted a departmental Agreement which will provide construction employment and training opportunities in ways calculated to mitigate the harms caused by poverty, unemployment and underemployment; and

WHEREAS, this Agreement reflects the City's adoption of policy to promote diversity, inclusion and racial equity in and around all working environments of City business and operations, including, but not limited to recruitment, hiring, retention, training and contracting; and

WHEREAS, this Agreement reflects a commitment by all parties to the diversity in the workforce hiring that reflect levels of minority, women and other worker utilization at levels which are representative of the relevant workforce of these groups in the Greater Los Angeles Area as determined by the U.S. Census Bureau; and

WHEREAS, the contracts for the construction of Projects will be awarded in accordance with the applicable provisions of the DPW's Administrative Policies and Procedures; and

WHEREAS, the Parties signatory to this Agreement pledge to work towards a mutually satisfactory completion of Projects;

NOW, THEREFORE, IT IS AGREED BETWEEN AND AMONG THE PARTIES HERETO, AS FOLLOWS:

ARTICLE I

DEFINITIONS

1.1 "Agreement" is defined as this Department of Public Works Project Labor Agreement and its applicability to all Projects.

1.2 "Apprentice" is defined as any worker who is indentured in a bona fide Labor/Management construction apprenticeship program, registered and approved by the State of California Department of Industrial Relations (DIR) Division of Apprenticeship Standards (DAS) or in the case of Projects with federal funding, indentured in a bona fide Labor/Management construction apprenticeship program, approved by the US Department of Labor (DOL) and California DAS.

1.3 "Apprenticeship Program" is defined as any Labor/Management construction apprenticeship program certified and approved by the California Division of Apprenticeship Standards (DAS) or in the case of Projects with federal funding, approved by the US DOL and California DAS.

1.4 "Awarding Authority" is defined as any board or commission of the City, or any employee or officer of the City, that is authorized to award or enter into any contract on behalf of the City.

1.5 "Board" is defined as the City of Los Angeles Board of Public Works.

1.6 "Bureau of Contract Administration" (BCA) is defined as the designated bureau

within the City's DPW responsible for administering this Agreement.

1.7 "City" is defined as the City of Los Angeles, a municipal corporation, and all City awarding authorities.

1.8 "Construction contract" is defined as a City contract which has been certified by the City Controller, awarded by the Board, and is necessary to complete the DPW Project.

1.9 "Contractor/Subcontractor/Employer(s)" (C/S/E) is defined as any individual firm, partnership, owner operator, or corporation, or combination thereof, including joint ventures, which is an independent business enterprise, and which is properly licensed for the work intended, and has entered into a contract covered under this Agreement or any of its contractors or subcontractors/owner operators of any tier, with respect to the construction of any part of the Project(s) under contract terms and conditions approved by the Board and incorporated within this Agreement.

1.10 "Core Worker" is defined as a verifiable member of a C/S/E's core workforce for the purpose of this Agreement if the worker's name appears on the C/S/E's active payroll for 60 of 100 working days immediately prior to the award of the construction contract; who has worked at least two-thousand (2,000) hours in the construction craft in which they are employed, during the prior four (4) years; and meets all standards required by applicable local, state or federal law or regulation.

1.11 "Covered Project(s)" or "Project" is defined as a project or projects which have been included within the Public Infrastructure Program Series List ("PIPS") and covered by this Agreement or so designated by the Board of Public Works. The Board may identify additional projects that are appropriate for coverage by the

Agreement for inclusion under the PIPS and include such projects by Board Resolution. The Board shall request an annual review of the DPW Capital Improvement Program to identify any new projects appropriate for inclusion within the PIPS.

1.12 "Employment Hiring Plan" (EHP) is defined as a C/S/E's detailed hiring plan as described in BCA's Targeted Hiring Guidelines for Contractors and the Policy.

1.13 "Engineer" is defined as the City Engineer or his/her authorized representative.

1.14 "FHWA Project" is defined as a DPW Project that is funded in whole or in part by the Federal Highway Administration (FHWA).

1.15 "Jobs Coordinator" is defined as the Prime Contractor's designated person, agent or agency that will coordinate a covered project's local hire referral process with the C/S/E, Unions and other referral organization, such as those listed in BCA's Targeted Hiring Guidelines for Contractors. The Jobs Coordinator will be responsible for documenting the hiring process of all workers on a covered project, and must be able to demonstrate or document to the BCA that it has the requisite qualification and/or experience to fulfill the duties and responsibilities as outlined in the Policy.

1.16 "Joint Administrative Committee" (JAC) is defined as described in Article XII of this Agreement.

1/.17 "LA/OCBTC" (Trades Council) is defined as the Los Angeles/Orange Counties Building and Construction Trades Council.

1.18 "Letter of Assent" is defined as the document that each C/S/E (of any tier) must sign and submit to the City's Inspector of Public Works, which formally binds them

to adherence to all the forms, requirements and conditions of this Agreement and Policy.

1.19 "Local Resident" is defined as either an individual whose primary residence is within Tier 1 or 2 zip code areas, or an individual whose primary place of residence is within the City of Los Angeles and has been identified as a Transitional Worker.

1.20 "Long-Term Unemployment" is defined as being jobless for 27 weeks or more, or as otherwise defined by the Bureau of Labor Statistics.

1.21 "Master Labor Agreement" is defined as the local area collective bargaining agreements negotiated and executed from time to time by (i) the applicable employer associations and (ii) Local Unions having jurisdiction over Covered Projects.

1.22 "Plan" is defined as the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry as referenced in Article XIV of this Agreement.

1.23 "Policy" is defined as the DPW Public Works Infrastructure Stabilization Policy.

1.24 "Public Infrastructure Program Series List" (PIPS) is defined as all projects contained in the adopted PIPS (Attachment "E") that are covered under this Agreement.

1.25 "Subscription Agreement" is defined as the contract between a C/S/E and a Union's Labor/Management Trust Fund(s) that allows the C/S/E to make the appropriate fringe benefit contributions in accordance with the contract terms.

1.26 "Targeted Hiring Guidelines for Contractors" is defined as the document provided by the BCA to assist C/S/E's in implementing the targeted hiring procedures.

1.27 "Tier 1" is defined as zip codes within the City, identified in Article 7.4 of this

Agreement, having at least 2 census tracts (or portion thereof) in which the median household income is less than 50% of the County of Los Angeles' median annual household income, and/or where the unemployment rate exceeds 200% of the County of Los Angeles' unemployment rate as reported by the most recent available U.S Census Bureau data.

1.28 "Tier 2" is defined as zip codes within the City, identified in Article 7.5 of this Agreement, having at least 2 census tracts (or portion thereof) in which the median household income is less than the County of Los Angeles' median annual household income, and/or where the unemployment rate exceeds 100% of the County of Los Angeles' unemployment rate as reported by the most recent Census Bureau data.

1.29 "Transitional Worker" is defined as an individual whose primary place of residence is within the City of Los Angeles and who prior to commencing work on a Project has been certified as satisfying at least one of the following Criteria: (1) having Veteran status; having a documented history of involvement with the criminal justice system; or being homeless. If the Jobs Coordinator or Employer is not able to identify anyone using Criteria (1), then Criteria (2) may be used. Criteria (2) is an individual that is either a graduate of an LA/OCBTC approved MC3 pre-apprenticeship program or facing two of the following barriers to employment: having a household income less than 50% of the Los Angeles County's median annual household income, receiving public assistance, lacking a GED or high school diploma, being a custodial single parent, suffering from long-term unemployment, being emancipated from the foster care system, or being an

apprentice with less than 15% of the apprenticeship hours required to graduate to journey level in a program as described in Section 1.3 above.

1.30 "Union(s)" or "Signatory Unions" is defined as the Los Angeles/Orange Counties Building and Construction Trades Council affiliated with the Building & Construction Trades Department (AFL/CIO) Craft International Unions or any other craft labor organization signatory to this Agreement, acting in their own behalf and on behalf of their respective affiliates and member organizations whose names are subscribed hereto and who have through their officers executed this Agreement.

ARTICLE II

SCOPE OF AGREEMENT

2.1 Parties: The Agreement shall apply and is limited to all C/S/Es performing construction on a DPW Project, the Board, and the Unions.

2.2 Project Description: The Agreement shall apply to all PIPS construction contracts awarded by either the Board or the Awarding Authority. The Board has the absolute right to combine, consolidate or cancel contracts or portions of contracts identified as part of the Project. Should the Board remove any contract from the Project and thereafter authorize that construction work be commenced on the contract, the contract may, at the discretion of the Board, be performed under the terms of the Agreement. After the fourth (4th) year of this Agreement, the parties shall meet and discuss additional and newer projects to be listed on a revised Attachment E, which projects shall be covered under this Agreement. Additionally, it is understood by the Parties that the Board may at any time, and at its sole

discretion, add additional projects under this Agreement not otherwise described in this Section 2.2.

2.3 Project Labor Disputes: The provisions of this Agreement, including the Master Labor Agreements ("MLA"), (which are the local collective bargaining agreements of the signatory Unions having jurisdiction over the work on the Project, as such may be changed from time-to-time and which are incorporated herein by reference) shall apply to the work covered by this Agreement. It is understood that this is a self-contained, stand alone Agreement and that by virtue of having become bound to this Project Labor Agreement, neither the Prime Contractor, Employer, nor the Subcontractor (of any tier) or owner-operator will be obligated to sign any other local, area, or national agreement, except as may be provided in Section 8.2, below. It is further agreed that, where there is conflict, the terms and conditions of this Agreement shall supersede and override terms and conditions of any MLA and all other national, area, or local collective bargaining agreements except for all work performed under the NTL Articles of Agreement, the National Stack/Chimney Agreement, the National Cooling Tower Agreement, all instrument calibration work and loop checking shall be performed under the terms of the UA/IBEW Joint National Agreement for Instrument and control systems Technicians, and the National Agreement of the International Union of Elevator Constructors, with the exception of Article IV (Work Stoppages, Strikes, Sympathy Strikes and Lockouts), Article XIII (Grievance and Arbitration Procedure) and Article XIV (Jurisdictional Disputes) of this Agreement, which shall apply to such work. All disputes relating to the interpretation or application of this Agreement

shall be subject to resolution by the grievance arbitration procedure set forth in Article XIII of this Agreement, except for those disputes exempted from the grievance procedure pursuant to Section 13.1. Where a subject is covered by a provision in an MLA and not covered by this Agreement, the provision of the MLA shall prevail. Any dispute as to the applicable source between this Agreement and any MLA for determining the wages, hours or working conditions of employees on a Project shall be resolved under the grievance procedures established in this Agreement.

2.4 Exclusions:

(1) The Agreement shall be limited to construction work on a Project which is approved by the Board, and is not intended to, and shall not apply to any construction work performed at any time prior to the effective date, or after the expiration or termination of the Agreement, or on other City projects.

(2) The Agreement is not intended to, and shall not, affect or govern the award of contracts by the Board, which are outside the approved scope of the Project.

(3) The Agreement is not intended to, and shall not, affect the operation or maintenance of any facilities whether related or not to Projects.

(4) The Agreement shall not apply to a C/S/E's executives, managerial employees, engineering employees, supervisors (except those covered by the MLAs), office and clerical employees, or any other employee not performing construction craftwork.

(5) Notwithstanding the foregoing, it is understood and agreed that

Building/Construction Inspector and Field Soils and Material Testers (inspectors) are a covered craft under this Agreement. This inclusion applies to the scope of work defined in the State of California Wage Determination for that Craft. This shall not cover quality assurance work performed by or on behalf of the DPW. Every Inspector performing under the wage classification of Building/Construction Inspector and Field Soils and Material Tester under a professional services agreement or a construction contract shall be bound to all applicable requirements of this Agreement. Notwithstanding the provisions of this sub-section, the DPW may engage consultants for limited periods of time in the event of an urgent need for specialized inspection services. The DPW must provide prior notice to the Trades Council that despite good faith efforts, it is unable to obtain qualified inspector(s) under the provisions of this Agreement. Such engagement shall be only to meet immediate and limited needs until such qualified inspectors working under this Agreement are available.

(6) This Agreement shall not apply to material suppliers or delivery by any means of material, supplies, or equipment required to any point of delivery, except that the hauling/delivery of soil, sand, gravel, aggregate, rocks, concrete, asphalt, excavation materials, fill material and construction debris shall be covered by this Agreement.

(7) This Agreement shall not apply to City employees.

(8) This Agreement shall not apply to the work of persons, firms and other entities that perform consulting, planning, scheduling, management or other

supervisory services on the Project, provided such entities do not perform craft employee construction work on the Project with their own employees or to customer service work performed post completion by an entity other than the C/S/E that performed the original construction work.

(9) This Agreement shall not apply to DPW construction contracts or Projects, if such Project has federal funding and the federal funding source has established provisions or rules that forbid the inclusion of a Project Labor Agreement.

(10) For FHWA Projects, this Agreement shall apply to the covered project, in accord with the policies and conditions under which the FHWA funds are received from the U.S. Department of Transportation.

(11) Out-of-State Workers: Hours worked by residents of states other than California shall not be included in calculation of total hours of Project work for purposes of the percentage requirements set forth by the Agreement.

(12) Notwithstanding the foregoing, demolition and asbestos abatement shall constitute work covered by the Project Labor Agreement when such work is part of a Covered Project.

2.5 The DPW and/or the C/S/Es, as appropriate, have the absolute right to award contracts or subcontracts on this Project to any C/S/E notwithstanding the existence or non-existence of any agreements between such C/S/E and any Union parties, provided only that such C/S/E is ready, willing and able to execute and comply with this Agreement should such C/S/E be awarded work covered by this Agreement.

ARTICLE III

EFFECT OF AGREEMENT

3.1 By executing the Agreement, the Unions and the Board agree to be bound by each and all of the provisions of the Agreement.

3.2 By accepting the award of a construction contract for a Project, each C/S/E agrees to be bound by each and every provision of the Agreement.

3.3 At the time that any C/S/E enters into a subcontract with any subcontractor of any tier providing for the performance of construction for a Covered Project, the C/S/E shall provide a copy of this Agreement to said subcontractor and shall require the subcontractor as a part of accepting the award of a construction subcontract to agree in writing in the form of a Letter of Assent to be bound by each and every provision of this Agreement prior to the commencement of work. See Attachment "A" for a sample Letter of Assent. Approval of any C/S/E to perform work on the Project will be contingent upon the submittal of its Letter of Assent and its Employment Hiring Plan.

3.4 This Agreement shall only be binding on the signatory C/S/Es hereto and shall not apply to the parents, affiliates, subsidiaries, or other ventures of any construction contract prior to the execution of this Agreement.

ARTICLE IV

WORK STOPPAGES, STRIKES, SYMPATHY STRIKES AND LOCKOUTS

4.1 The Unions, Board and C/S/Es agree:

(1) During the existence of this Agreement, there shall be no strike, sympathy strike, picketing, hand billing, slowdown, withholding of work, refusal to work, lockout, sick-out, walk-off, sit-down, stand-in, wobble, boycott, or other work stoppage, disruption, advising the public that a labor dispute exists, or other impairment of any kind for any reason by the Unions or employees employed on the Project, at the job site of the Project, or at any other facility of the City because of a dispute on this Project.

(2) As to employees employed on the Project, there shall be no lockout of any kind by any C/S/E(s) covered by the Agreement. The C/S/E(s) may lay off employees for lack of work or delay of work on the Project.

(3) The Unions agree that they shall not sanction in any way any picket line or other impairment of the work on the Project and will affirmatively take all measures necessary to effectively induce their respective members to cross any and all picket lines and report for work as scheduled and that responsible representatives of the Unions who are employed on the Covered Project will also do so themselves.

(4) The Unions agree that they shall not sanction, aid, abet, encourage or continue any work stoppage, strike, picketing or other disruptive activity at the Project site or C/S/E's business site that will economically and/or materially affect the completion of the Project. Any such costs that

economically and/or materially harm the City shall be borne by the affected Union and made payable to the City.

(5) Notwithstanding any provision of this Agreement to the contrary, it shall not be a violation of this Agreement for any Union to withhold the services of its members (but not the right to picket) from a particular C/S/E who:

(i) fails to timely pay its weekly payroll; or

(ii) fails to make timely payments to the Union's Labor/Management Trust Funds in accordance with the provisions of the applicable MLA. Prior to withholding its members services for the C/S/E's failure to make timely payments to the Union's Labor/Management Trust Funds, the Union shall give at least ten (10) days (unless a lesser period of time is provided in the Union's MLA, but in no event less than forty-eight (48) hours) written notice of such failure to pay by registered or certified mail, return receipt requested, and by either email or facsimile transmission to the involved contractor, the prime contractor, and the BCA. Union will meet within the ten (10) day period to attempt to resolve the dispute.

(iii) Upon the payment of the delinquent C/S/E of all monies due and then owing for wages and/or fringe benefit contributions, the Union shall direct its members to return to work; the C/S/E shall return all such members back to work.

4.2 Expiration of Local Agreements: If the MLA, or any local, regional, and other applicable collective bargaining agreements expire during the term of the Covered

Project, the Union(s) agree that there shall be no work disruption of any kind as described in Section 4.1 above as a result of the expiration of any such agreement(s) having application on this Covered Project and/or failure of the involved Parties to that agreement to reach a new contract. For C/S/Es which are not independently signatory to an MLA, terms and conditions of employment established and set for purposes of prevailing wage requirements under this Agreement at the time of bid shall remain established and set. Otherwise to the extent that such agreement does expire and the Parties to that agreement have failed to reach concurrence on a new contract, work will continue on the Covered Project on one of the following two (2) options, both of which will be offered by the Unions involved to the C/S/Es affected:

(1) Each of the Unions with a contract expiring must offer to continue working on the Covered Project under interim agreements that retain all the terms of the expiring contract, except that the Unions involved in such expiring contract may each propose wage rates and employer contribution rates to employee benefit funds under the prior contract different from what those wage rates and employer contributions rates were under the expiring contracts. The terms of the Union's interim agreement offered to C/S/Es will be no less favorable than the terms offered by the Union to any other employer or group of employers covering the same type of construction work in Los Angeles County.

(2) Each of the Unions with a contract expiring must offer to continue working on the Project under all the terms of the expiring contract, including the

wage rates and employer contribution rates to the employee benefit funds, if the C/S/E affected by that expiring contract agrees to the following retroactive provisions: if a new MLA, local, regional or other applicable labor agreement for the industry having application at the Covered Project is ratified and signed during the term of this Agreement and if such new labor agreement provides for retroactive wage increases, then each affected C/S/E shall pay to its employees who performed work covered by this Agreement at the Project during the hiatus between the effective dates of such expired and new labor agreements, an amount equal to any such retroactive wage increase established by such new labor agreement, retroactive to whatever date is provided by the new labor agreement for such increase to go into effect, for each employee's hours worked on the Project during the retroactive period. All Parties agree that such affected C/S/Es shall be solely responsible for any retroactive payment to its employees and that neither the Project, nor the Board, nor the Board's designee, nor any other C/S/E has any obligation, responsibility or liability whatsoever for any such retroactive payments or collection of any such retroactive payments, from any such C/S/E.

(3) Some C/S/Es may elect to continue to work on the Project under the terms of the interim agreement option offered under paragraph (1) above and other C/S/Es may elect to continue to work on the Project under the retroactivity option offered under paragraph (2) above. To decide between the two options, C/S/Es will be given one week after the particular labor

agreement has expired or one week after the Union has personally delivered to the C/S/Es in writing its specific offer of terms of the interim agreement pursuant to paragraph (1) above, whichever date is later. If the C/S/E fails to timely select one of the above options, the C/S/E will be deemed to have selected paragraph (2), above.

4.3 Expedited Arbitration will be utilized for all work stoppages and lockouts. In lieu of or in addition to any other action at law or equity, any party may institute the following procedure when a breach or violation of Section 4.1 is alleged to have occurred:

(1) The party invoking this procedure shall notify the permanent arbitrator next in sequence from the following list:

1. Christopher David Ruiz Cameron
2. Michael Rappaport
3. Walter Daugherty
4. Paul Greenberg
5. Lou Zigman

The DPW and the Unions agree these shall be the five permanent Arbitrators under this procedure. In the event that none of the five permanent Arbitrators are available for a hearing within 24 hours, the party invoking the procedure shall have the option of delaying until one of the five permanent Arbitrators is available or of asking the permanent Arbitrator that would normally hear the matter to designate an arbitrator to sit as a substitute Arbitrator for this dispute. If any of the permanent Arbitrators ask

to be relieved from their status as a permanent Arbitrator, the DPW and the Unions shall mutually select a new permanent Arbitrator from the following list of arbitrators:

1. John Kagel
2. Fred Horowitz
3. Wayne Estes

The selection of a new permanent Arbitrator shall be made by each party alternately striking from the foregoing list until one name remains who shall be the replacement permanent Arbitrator. Expenses incurred in arbitration shall be borne equally by the Union and the Contractor involved and the decision of the Arbitrator shall be final and binding on both Parties, provided, however, that the Arbitrator shall not have the authority to alter or amend or add to or delete from the provisions of this Agreement in any way. Notice to the Arbitrator shall be by the most expeditious means available, including by telephone and by facsimile or email to the party alleged to be in violation and to the Trades Council and involved local Union if a Union is alleged to be in violation.

(2) Upon receipt of said notice, the Arbitrator shall convene a hearing within twenty-four (24) hours if it is contended that the violation still exists.

(3) The Arbitrator shall notify the Parties to the Arbitration by telephone and by facsimile or email of the place and time for the hearing. Notice shall be given to the individual Unions alleged to be involved. Said hearing shall be completed in one session, which, with appropriate recesses at the

Arbitrator's discretion, shall not exceed twenty-four (24) hours unless otherwise agreed upon by all Parties. A failure of any party to attend said hearings shall not delay the hearing of evidence or the issuance of any decision by the Arbitrator.

(4) The sole issue at the hearing shall be whether or not a violation of Sections 4.1 or 4.2 of this Article IV has in fact occurred. The Arbitrator shall have no authority to consider any matter of justification, explanation or mitigation of such violation or to award damages, which issue is reserved for court proceedings, if any. The decision shall be issued in writing within three (3) hours after the close of the hearing, and may be issued without a written opinion. If any party desires a written opinion, one shall be issued within fifteen (15) days, but its issuance shall not delay compliance with or enforcement of the decision. The Arbitrator may order cessation of the violation of this Article and other appropriate relief and such decision shall be served on all Parties by hand or registered mail upon issuance.

(5) Such decision may be enforced by any Court of competent jurisdiction upon the filing of this Agreement and all other relevant documents referred to above in the following manner. Written notice of the filing of such enforcement proceedings shall be given to the other party. In the proceeding to obtain a temporary order enforcing the Arbitrator's decision as issued under Section 4.3(3) of this Article, all Parties waive the right to a hearing and agree that such proceedings may be ex parte. Such agreement does not waive any party's right to participate in a hearing for a final order

of enforcement. The Court's order or orders enforcing the Arbitrator's decision shall be served on all Parties by hand or delivered by registered mail.

(6) Any rights created by statute or law governing arbitration proceedings inconsistent with the above procedure or which interfere with compliance therewith are hereby waived by the Parties to whom they accrue.

(7) The fees and expenses incurred in arbitration shall be divided equally by the parties (the applicable Union and Contractor) to the arbitration.

4.4 The procedures contained in Section 4.3 shall be applicable to alleged violations of Article IV to the extent any conduct described in Sections 4.1 or 4.2 occurs on the Project. Disputes alleging violation of any other provision of this Agreement's other provisions, including any underlying disputes alleged to be in justification, explanation, or mitigation of any violation of Sections 4.1 or 4.2 shall be resolved under the applicable grievance adjudication procedures for these other Articles.

ARTICLE V

NO DISCRIMINATION

5.1 The C/S/Es and Unions agree not to engage in any form of discrimination, including in the hiring and dispatching of workers, on the grounds of, or because of, race, religion, national origin, ancestry, sex, sexual orientation, age, physical handicap, domestic partner status, medical condition, political affiliation, membership in a labor organization, being a party to a collective bargaining agreement, color or disability.

ARTICLE VI

UNION SECURITY

6.1 The C/S/Es recognize the Unions as the respective sole bargaining representatives for all craft employees working within the scope of this Agreement.

6.2 Employees are not required to become or remain union members or pay dues or fees as a condition of performing Covered Work under this Agreement. Employers shall make and transmit all deductions for union dues, fees, and assessments that have been voluntarily authorized by employees in writing in accordance with the applicable Master Labor Agreement. Nothing in this Section 6.2 is intended to supersede independent requirements of applicable Master Labor Agreements as to those Employers otherwise signatory to such Master Labor Agreements and as to the employees of those Employers who are performing Covered Work.

ARTICLE VII

REFERRAL

7.1 The Union(s) shall be the primary source of all craft labor employed on the Project(s) and will exert their best efforts to recruit and identify individuals, particularly residents of the City residing in the Tier 1 or Tier 2 zip code areas, as well as those referred by the Jobs Coordinator, for entrance into joining labor/management apprenticeship programs, and to assist individuals in qualifying and becoming eligible for such programs. In the event that the C/S/E has it's own Core Worker(s), and wishes to employ such workers to perform covered work, the C/S/E shall employ such workers in accord with the provisions of this Article VII.

The following process shall govern the employment of workers at the Project:

(1) A worker shall be considered a member of a C/S/E's core workforce for the purposes of this Article if the worker meets the required definition stated in Section 1.10 of this Agreement. The C/S/E shall identify Core Workers in their Employment Hiring Plan and shall provide payroll records evidencing the worker's qualification as a Core Worker upon request by the City. Prior to each C/S/E, which utilizes any core employees, performing any work on Covered Project(s), each such C/S/E shall provide a list of its core employees to the BCA and the Trades Council. Failure to do so will prohibit the C/S/E from using any core employees. The number of Core Workers on this Project shall be governed by the following procedure: one Core Worker shall be selected and one worker from the hiring hall of the affected trade or craft and this process shall repeat until such C/S/E's requirements are met or until such C/S/E has hired five (5) such Core Workers for that craft, whichever occurs first. Thereafter, all additional employees in the affected trade or craft shall first be requisitioned from the hiring hall in accordance with other provisions in Article VII.

(2) In the event of a reduction-in-force or layoff, such will take place in a manner to assure that the number of Core Workers in the affected craft does not exceed, at any time, the number of others working in that craft who were employed pursuant to other procedures available to the C/S/E under this Agreement. This provision applies only to C/S/Es which are not independently signatory to a current MLA for the craft workers under their

employ and is not intended to limit the transfer provisions of the MLAs of any Union.

7.2 C/S/Es shall be bound by and utilize the registration facilities and referral systems established or authorized by the signatory Unions for all job site craft employee(s) before such employee(s) begin work, when such procedures are not in violation of Federal or State law or in conflict with provisions set forth in this Agreement.

7.3 In the event that the referral facilities maintained by the Unions are unable to fill the requisition of a C/S/E for Local Residents and/or Transitional Workers within a forty-eight (48) hour period after such requisition is made by the C/S/E (Saturdays, Sundays and holidays excepted), the C/S/E shall be free to obtain Local Residents and/or Transitional Workers from any source. However, for all other requisitions by a C/S/E for non-Local Residents or non-Transitional Workers, only after a forty-eight (48) hour period (Saturdays, Sundays and holidays excepted) after such requisition is made by the C/S/E, shall the C/S/E be free to obtain work persons from any source if the Unions are unable to fill the requisition. However, the C/S/E is still responsible for complying with conditions and requirements of the Targeted Hiring Guidelines for Contractors and the Policy.

(1) The C/S/E's must document, from the applicable Tiers, all efforts made to comply with the targeted hiring process to locate and hire Local Residents and/or Transitional Workers. The C/S/E may employ Local Residents and/or Transitional Workers referred by the Jobs Coordinator. However, in the event the Jobs Coordinator is unable to fill the requisition of a C/S/E for Local Residents and/or Transitional Workers, the C/S/E may utilize any

organization, such as those listed in the Targeted Hiring Guidelines for Contractors, to assist them in satisfying the requirements of the Targeted Hiring Guidelines for Contractors and the Policy.

(2) The C/S/E shall inform the Unions, Job Coordinator and the BCA of the name, address, worker craft classification and social security number of any worker hired from other sources upon their employment on the Project(s).

(3) No Local Resident and/or Transitional Worker, having been pre-screened and/or pre-qualified by the Jobs Coordinator, and employed by the C/S/E to work on the Project, shall be required to participate in any Joint Labor/Management "boot camp" or pre-apprentice program that will unnecessarily delay the Local Resident and/or Transitional Worker's start of work or cause said worker's termination due to having to participate in such "boot camps" or pre-apprentice programs.

(4) Any work person hired under this Section 7.3, as well as all other workers hired under this Article VII, shall be obligated to register with the appropriate Union hiring hall, prior to their first day of employment on the Project.

7.4 The Unions will exert their best efforts to refer/recruit sufficient numbers of skilled craft Local Residents and Transitional Workers to fulfill the requirements of the C/S/E(s). In recognition of the fact that the communities within the boundaries of the City will be impacted by the construction of the Project(s), the Parties agree to support the development and graduation of Transitional construction apprentices and workers from residents within Tier 1 or Tier 2 zip code areas. Towards that end, the Unions agree to encourage and provide referrals and utilization of

qualified workers residing preferably within the Tier 1 zip code areas identified in the following:

Tier 1 Zip Codes

90001	90013	90028	90044	90068	91402
90002	90014	90029	90046	90077	
90003	90015	90031	90047	90089	
90005	90016	90032	90049	90248	
90006	90017	90033	90056	90731	
90007	90018	90037	90057	90744	
90008	90020	90038	90058	90810	
90010	90021	90039	90059	90813	
90011	90023	90042	90063	91205	
90012	90024	90043	90065	91331	

7.5 Wherein the Unions cannot provide the C/S/Es, having documented their efforts in the attainment of Local Residents and/or Transitional Workers within the Tier 1 zip code areas as listed in Section 7.4 above, the Unions will exert their best efforts to recruit and identify Local Residents and/or Transitional Workers within Tier 2 zip code areas identified in the following and Transitional Workers in the remaining zip code areas of the City:

Tier 2 Zip Codes

90004	90048	90265	90710	91304	91342	91405	91605
90019	90061	90272	90717	91306	91343	91406	91606
90025	90062	90290	90732	91307	91344	91411	91607
90026	90064	90291	90745	91311	91345	91423	
90027	90066	90292	91040	91316	91352	91504	
90034	90067	90305	91042	91324	91356	91505	
90035	90095	90402	91201	91325	91364	91506	
90036	90230	90405	91206	91330	91367	91601	
90041	90232	90501	91302	91335	91401	91602	
90045	90247	90502	91303	91340	91403	91604	

The Unions will exert their best efforts to recruit and identify Local Residents and/or Transitional Workers of the City and assist individuals in qualifying and becoming eligible for such apprenticeship programs.

7.6 The Prime Contractor is responsible for ensuring compliance with the targeted hiring process for the Project(s) to achieve the following anticipated levels of participation:

(1) The following percentages shall be the targeted hiring for the Project:

(a) At least 30% of total work hours shall be performed by Local Residents residing within Tier 1 described in Article 7.4. If the 30% local hire is not attained utilizing the Tier 1, the outreach shall expand to the Tier 2 as described in Article 7.5 of this Agreement.

(b) At least 10% of total work hours shall be performed by Transitional Workers residing within Tier 1 or Tier 2 zip code areas described in Articles 7.4 and 7.5 respectively and the remaining zip code areas within the City of Los Angeles. These hours shall be applied towards the 30% Local Resident targeted hiring.

(c) Apprentices must be employed on each project in accordance with the requirements mandated by Section 1777.5 of the California Labor Code. The Parties agree that City residents in the Tier 1 or Tier 2 zip code areas, as well as Transitional Workers, will perform 50% of all apprenticeship hours worked on the Project.

An apprentice who begins his/her period of apprenticeship as a City resident in the Tier 1 or Tier 2 zip code areas, or an apprentice

Transitional Worker, will retain that status for the entire apprenticeship, regardless of any changes in the apprentice's residence provided the Unions submit to BCA the necessary identifying information to enable the tracking of such apprentices, if requested by BCA.

(d) The C/S/Es shall coordinate with their designated Jobs Coordinator to document their compliance efforts through the utilization of the Craft Request Form, hiring hall procedures, the resources of organizations listed in BCA's Targeted Hiring Guidelines for Contractors, or any other organization/agency that can assist the C/S/E in meeting this requirement. The provisions to address the non-attainment of the targeted hiring participation and/or apprenticeship hiring participation levels on a Project are addressed in the Policy.

(2) The employer retains authority in making individual hiring decisions.

(3) Hours worked by residents of states other than California shall not be included in calculation of total hours of Project work for purposes of the percentage requirements set forth above.

(4) The above referenced targeted hiring shall apply to FHWA projects in accord with the policies and conditions under which the FHWA funds are received from the U.S. Department of Transportation.

7.7 The Transitional Workers may be referred to the Unions from the Jobs Coordinator or Employer. The Jobs Coordinator or Employer shall pre-screen and/or pre-

qualify any applicant prior to referral to the Unions. Drug screening will be a prerequisite to employment. The following criteria will be used to identify the Transitional Worker, with first priority given to Group 1:

(1) Satisfies one of the following criteria:

a. Being a veteran;

b. Having a documented history of involvement with the justice system;

c. Being homeless; or

(2) Is an LA/OCBTC approved MC3 pre-apprenticeship program graduate

OR

Faces at least two of the following barriers to employment:

a. Having a household income below 50% of the Los Angeles County's median annual household income;

b. Emancipated from the foster care system;

c. Receiving public assistance;

d. Lacking a GED or high school diploma;

e. Being an apprentice with less than 15% of the apprentice hours required to graduate to journey level in a program as described in Section 1.3;

f. Being a custodial single parent;

g. Suffering from long-term unemployment, as described in Section 1.20;

To qualify under this section, the Jobs Coordinator shall verify and certify that the individual's primary place of residence is within the City and that such individual

satisfies the criteria set forth above.

7.8 The C/S/Es and the Unions recognize a desire to facilitate the entry into the building and construction trades of veterans who are interested in careers in the building and construction industry. The C/S/Es and Unions agree to utilize the services of the Center for Military Recruitment, Assessment and Veterans Employment (hereinafter "Center") and the Center's "Helmets to Hardhats" program to serve as a resource for preliminary orientation, assessment of construction aptitude, referral to apprenticeship programs or hiring halls, counseling and mentoring, support network, employment opportunities and other needs as identified by the Parties.

7.9 The Unions and C/S/Es agree to coordinate with the Center to create and maintain an integrated database of veterans interested in working on a Project and of apprenticeship and employment opportunities for a Project. To the extent permitted by law, the Unions will give credit to such veterans for bona fide, provable past experience.

7.10 The C/S/Es shall use the Craft Request Form (See Attachment C) and the procedures written therein to request any and all workers from Unions with a concurrent transmittal of such request to the Jobs Coordinator, including workers qualified as Local Residents, Transitional Workers, and/or general dispatch.

(1) When Local Residents and/or Transitional Workers are requested by the C/S/Es, the Unions will refer such workers regardless of their place in the Unions' hiring halls' list and normal referral procedures.

(2) In the event that a C/S/E, having not achieved its targeted hiring participation levels, requests a Local Resident and/or Transitional Worker from the Union hiring facility, and is referred a worker who is not a Local Resident and/or Transitional Worker, the C/S/E is under no obligation to hire the referred worker for the Project work and shall notify the Union hiring facility and the Jobs Coordinator.

(3) The C/S/Es, Unions and Jobs Coordinator agree to maintain copies of all Craft Request Forms used on the Project submitted or received including transmission verification reports that are date/time imprinted. All Craft Request Forms and transmission verification reports shall be available for inspection and copies provided, upon request by the City representative as described in Article XI of this Agreement.

7.11 Apprentices

(1) The Parties recognize the need to maintain continuing support of the programs designed to develop adequate numbers of competent workers in the construction industry, the obligation to capitalize on the availability of the City's local work force, and the opportunities to provide continuing work for Projects covered by this Agreement. To these ends, the Parties shall facilitate, encourage, and assist Local Residents and/or Transitional Workers to commence and progress in Labor/Management apprenticeship and/or training programs in the construction industry leading to participation in such apprenticeship programs. The City, Jobs Coordinator, Work Source Centers, other non-profit entities, organizations and the Unions, will work

cooperatively to identify, or establish and maintain effective programs and procedures for persons interested in entering the construction industry and which will help prepare them for the formal joint Labor/Management apprenticeship programs maintained by the signatory unions.

(2) Unions shall track retention of Apprentices hired through this program for so long as those Apprentices participate in a joint labor/management apprenticeship program. The DPW shall provide a list of all Apprentices who have worked on City of Los Angeles PLA projects to the apprenticeship coordinators of the signatory unions on a quarterly basis. In turn, the signatory unions shall collect and compile information on the retention of these Apprentices and submit this information to the DPW on a quarterly basis. The DPW will use the information provided to generate a quarterly report on retention of Apprentices on the City's PLA projects.

(3) All apprentices shall work under the direct supervision of a journeyman from the trade in which the apprentice is indentured. A journeyman shall be defined as set forth in the California Code of Regulations, Title 8 [apprenticeship] section 205, which defines a journeyman as a person who has either completed an accredited apprenticeship in his or her craft, or has completed the equivalent of an apprenticeship in length and content of work experience and all other requirements in the craft which has workers classified as journeyman in the apprenticeable occupation. Should a question arise as to a journeyman's qualification under this subsection, the

C/S/E shall provide adequate proof evidencing the worker's qualification as a journeyman.

ARTICLE VIII

WAGES AND BENEFITS

8.1 Wages.

All employees covered by this Agreement shall be classified in accordance with work performed and paid the hourly wage rates for those classifications in compliance with the applicable prevailing wage rate determination established pursuant to the California Labor Code by the Department of Industrial Relations or as established by the US DOL if applicable. If a prevailing rate increases during the term of this Agreement under State law or Federal law, the Contractor shall pay the rate as of its effective date under the applicable law. The C/S/Es directly signatory to one or more of the MLAs are required to pay all wages set forth in those MLAs without reference to the forgoing. If the prevailing wage laws are repealed during the term of this Agreement, the contractor shall pay the wage rates established under the MLAs, except as otherwise provided in this Agreement.

8.2 Benefits.

(1) All C/S/Es not signatory to the established Labor/Management Trust Fund agreements, as specified in the MLAs for the craft workers in their employ, shall sign a "Subscription Agreement" with the appropriate Labor/Management Trust Fund covering the work performed under this agreement.

(2) All C/S/Es shall pay contributions to the established employee benefit funds on behalf of all employees performing Project work under this Agreement in the amounts designated in the appropriate MLA and make all employee-authorized deductions in the amounts designated in the appropriate MLA; provided, however, that such contributions shall not exceed the contribution amounts set forth in the applicable prevailing wage determination. The C/S/Es directly Signatory to one or more of the MLAs are required to make all contributions set forth in those MLAs without reference to the forgoing. Bona fide jointly-trusteed benefit plans or authorized employee deductions programs established or negotiated under the applicable MLA or by the Parties to this Agreement during the life of this Agreement may be added, provided that the contributions do not exceed the amounts set forth in the applicable prevailing wage determination.

(3) The C/S/E adopts and agrees to be bound by the written terms of the applicable, legally established, trust agreement(s) specifying the detailed basis on which payments are to be made into, and benefits paid out of, such trust funds for its employees. The C/S/E authorizes the Parties to such trust funds to appoint trustees and successors' trustees to administer the trust funds and hereby ratifies and accepts the trustees so appointed as if made by the C/S/E.

ARTICLE IX

EMPLOYEE GRIEVANCE PROCEDURE

9.1 Should a grievance arise regarding the imposition of discipline of an employee, or the dismissal of an employee, working on Project work, all such grievance(s) shall be processed, exclusively, under the grievance procedure contained in the applicable MLA for the craft Union representing such employee(s) and not under the provisions of the Grievance Arbitration provisions of Article XIII.

9.2 The C/S/Es shall not discipline or dismiss its employees except for good cause.

ARTICLE X

DEPARTMENT POLICIES AND PROCEDURES

10.1 All construction contracts identified by the DPW as part of the Projects shall include the following provisions. Such provisions include, but are not limited to:

(1) All persons who perform labor in the execution of a construction contract shall be paid the prevailing rate of wages applicable to the classification as provided in Article III, Section 377 of the Los Angeles City Charter.

(2) All C/S/Es shall provide information concerning their experience, financial qualifications, including proof of a current State Contractor's License, Business Tax Registration Certificate, and ability to perform said contract or subcontract.

10.2 In addition to the above requirements, the C/S/Es and Unions understand and agree that all construction contracts shall be awarded in accordance with other applicable provisions of the Los Angeles City Charter ("Charter") (effective July 1,

2000), and the Los Angeles Administrative Code ("Administrative Code") (and any future amendments applicable thereto), including, but not limited to:

(1) Los Angeles City Charter Article III, Section 371 (award of construction contracts to the lowest responsible bidder);

(2) Administrative Code Sections, 10.8-1 0.13 (prohibition of discrimination); and Mayor's Executive Directive No. 2001-26 (City of Los Angeles Minority, Women, and Other Business Enterprise Program).

ARTICLE XI

COMPLIANCE

11.1 It shall be the responsibility of the C/S/Es and Unions to investigate and monitor compliance with the provisions of the Agreement contained in Article VIII (Wages and Benefits). The Board shall appoint the BCA or its designee to investigate and monitor compliance with Article VIII, the applicable provisions of the Charter and the Administrative Code, including, but not limited to, the prevailing wage requirements of the Charter, Local Residents, and Transitional Worker hiring compliance and the Policy, and the affirmative action provisions of the Administrative Code, and to recommend to the Board or designee enforcement measures to ensure the C/S/E's compliance with the general conditions of a construction contract and the Policy. At the conclusion of any six-month period, the Parties to the Agreement shall report to the Board with a status update on the Agreement with regard to that Project, including a description of any obstacles or barriers faced. The provisions of this Article shall not substitute for or preclude any

employee or Union from filing a grievance for any violation of Article VIII under the provisions of the Grievance Arbitration Procedure provisions of Article XIII.

11.2 Each C/S/E shall cooperate fully and promptly with any inquiry or investigation the City or its designated representatives deems necessary in order to monitor compliance with the provisions in this Agreement and the Policy.

ARTICLE XII

JOINT ADMINISTRATIVE COMMITTEE

12.1 The Parties to this Agreement may establish an eight (8) person Joint Administrative Committee (JAC). This JAC shall be comprised of one (1) representative selected by the Board; one (1) representative of the City Inspector of Public Works; one (1) representative of the City Engineer; one (1) representative of the prime contractor, and four (4) representatives of the signatory Unions to be appointed by the Trades Council, to be chaired jointly by a representative of the City Inspector of Public Works and the Council. Each representative shall designate an alternate who shall serve in his or her absence.

12.2 The JAC shall meet at the call of either of the joint chairs to discuss the implementation and administration of this Agreement, the progress of the Project, general labor management problems that may arise, and any other matters consistent with this Agreement. A unanimous decision of the JAC shall be final and binding upon all Parties. However, the JAC shall have no authority to make determinations upon or to decide grievances arising under this Agreement.

12.3 A quorum will consist of at least two (2) City and two (2) signatory union

representatives. For voting purposes, only an equal number of City and signatory union representatives present may constitute a voting quorum.

ARTICLE XIII

GRIEVANCE ARBITRATION PROCEDURE

13.1 The Parties hereby agree that all grievances and disputes that may arise concerning the meaning, application or the interpretation of the terms of this Agreement, other than disputes arising from conduct described in Sections 4.1 and 4.2, Article IX (Employee Grievance Procedure) and Sections 14.1, 14.2, 14.3 and 14.4 shall be settled in accordance with the following procedures set out herein. Grieving parties are encouraged to meet as soon as possible and try to resolve the dispute. However, if a resolution cannot be reached, the following procedure shall be used.

13.2 Grievances and disputes shall be settled according to the following procedures:

Step 1: The business representative of the local Union involved shall first attempt to settle the matter by oral discussion with the particular C/S/E's representative no later than five (5) working days after the Union submitting the grievance first became aware of, or by the use of reasonable diligence should have been aware of, the occurrence first giving rise to the dispute or grievance. If the matter is not resolved with the C/S/E's representative within five (5) working days after the oral discussion with said C/S/E's representative, the dispute or grievance shall be reduced to writing by the grieving Union.

Step 2: In the event that the representatives (C/S/E and Union) are unable to resolve

the grievance after its referral to Step 1, either involved party may submit the grievance, within five (5) business days of the Step 1 meeting of the parties to the grievance, to the Joint Administrative Committee (JAC), which shall meet within five (5) business days after such referral (or such longer time as is mutually agreed upon by all representatives of the JAC), to confer in an attempt to resolve the grievance. If the grievance is not resolved by the parties to the grievance within five (5) business days after its referral (or such longer time as is mutually agreed on by all representatives of the JAC) to the JAC, it may be referred within five (5) business days by either party to Step 3 by written notice of the submittal of the grievance to arbitration in accordance with the provisions set forth below.

Step 3: After notice by any party of intent to submit a grievance to arbitration, the Parties shall have five (5) working days to attempt, by mutual agreement, to select as the Arbitrator to hear the dispute, one of the Arbitrators listed under the Expedited Arbitration provisions of Article IV, Section 4.3 of this Agreement. If the Parties are unable to reach such agreement, the first arbitrator from the list, on a rotational basis, shall be the arbitrator to hear the dispute. The decision of the Arbitrator shall not have the authority to alter, amend, add to or delete from the provisions of this Agreement in any way. A failure of any party to attend said hearing shall not delay the hearing of evidence or the issuance of any decision by the Arbitrator. The fees and expenses incurred in arbitration shall be divided equally by the parties (the applicable Union and Contractor) to the arbitration. Should any party seek

confirmation of the Award made by the Arbitrator, the prevailing party shall be entitled to receive its reasonable attorney fees and costs.

13.3 The time limits specified in any step of the Grievance Arbitration Procedure set forth in Section 13.2 may be extended by mutual agreement of the Parties. However, failure to process a grievance, or failure to respond in writing within the time limits provided above, without a request for an extension of time, shall be deemed a waiver of such grievance without prejudice, or without precedent to the processing and/or resolution of like or similar grievances.

13.4 Grievances which are settled directly by the Parties to such grievance shall not be precedent setting.

13.5 The City or its designated representative shall be given advance notification of all proceedings of all actions at Steps 2 and 3 and may observe such proceedings upon request.

ARTICLE XIV

JURISDICTIONAL DISPUTES / PRE-JOB CONFERENCE

14.1 The assignment of work will be solely the responsibility of the C/S/E performing the work involved; and such work assignments will be in accordance with the Plan for the Settlement of Jurisdictional Disputes in the Construction Industry (the "Plan") or any successor plan.

14.2 All jurisdictional disputes on this Project, between or among Building and Construction Trades Unions and employers shall be settled and adjusted according to the present Plan established by the Building and Construction Trades

Department or any other plan or method of procedure that may be adopted in the future by the Building and Construction Trades Department. Decisions rendered shall be final, binding and conclusive on the C/S/Es and Unions. A decision shall not award back pay or any other damages for a misassignment of work, nor may any party bring an independent action for back pay or any other damages based upon a decision.

14.3 If a dispute arising under this Article involves the Southwest Regional Council of Carpenters or any of its subordinate bodies, an Arbitrator shall be chosen by the procedures specified in Article V, Section 5, of the Plan from a list composed of John Kagel, Thomas Angelo, Robert Hirsch and Thomas Pagan. The Arbitrator's hearing on the dispute shall be held at the offices of the Council within fourteen (14) days of the selection of the Arbitrator. All other procedures shall be as specified in the Plan.

14.4 No Work Disruption Over Jurisdiction. All jurisdictional disputes shall be resolved without the occurrence of any strike, work stoppage, disruption, or slowdown of any nature and the C/S/E's assignments shall be adhered to until the dispute is resolved. Individuals violating this section shall be subject to immediate discharge.

14.5 Pre-Job Conference. A pre-job conference shall be held with all parties prior to the start of work by the prime contractor for the Covered Project covered by this Agreement. The purpose of the conference will be to, among other things, determine craft manpower needs, schedule of work for the contract and project work rules/owner rules. The subcontractors/owner operators of any tier will be advised in advance of all such conferences and shall participate. The Trades

Council and the BCA's Office of Contract Compliance shall be advised in advance of all such conferences and may participate if they wish. All work assignments shall be disclosed by the C/S/E at a pre-job conference. Any formal jurisdictional dispute raised under Article XIV must be raised at the pre-job conference upon disclosure of the work assignments. If the C/S/E intends to change the work assignment after the pre-job conference or to make an assignment of work not previously known, the C/S/E must notify the appropriate affected craft union(s) prior to the commencement of work. The C/S/E performing all project work that was not previously assigned at the pre-job conference will conduct a separate pre-job conference for such newly assigned work prior to commencing such work.

ARTICLE XV

MANAGEMENT RIGHTS

15.1 The C/S/Es shall retain full and exclusive authority for the management of their operations, as set forth in this Article, unless expressly limited or required by the other Articles of this Agreement on an MLA. This includes, but is not limited to, the right to direct their working force and to establish coordinated working hours and starting times.

15.2 There shall be no limit on production by workers or restrictions on the full use of tools or equipment. Craftsmen using tools shall perform any of the work of the trades and shall work under the direction of the craft foremen. There shall be no restrictions on efficient use of manpower other than as may be required by safety regulations. The C/S/Es may utilize the most efficient methods or techniques of

construction, tools or other labor-saving devices to accomplish the work. Restrictive practices not a part of the terms and conditions of this Agreement will not be recognized.

15.3 The C/S/Es shall be the sole judge of the number and classifications of employees required to perform work subject to this Agreement. The C/S/Es shall have the absolute right to hire, promote, suspend, discharge or lay off employees at their discretion and to reject any applicant for employment, subject to the provisions of the respective craft collective bargaining agreement between the particular C/S/E and Union and pursuant to this Agreement.

15.4 Nothing in this Agreement shall be construed to limit the right of any of the C/S/Es to select the lowest bidder they deem qualified for the award of contracts or subcontracts or material, supplies, or equipment purchase orders on the Covered Project. The right of ultimate selection remains solely with the C/S/E in accordance with the construction contract.

15.5 It is recognized that certain materials, equipment and systems of a highly technical and specialized nature will have to be installed at the Covered Project. The nature of the materials or the nature of the equipment and systems, together with requirements of manufacturer's warranty, may dictate that it will be pre-fabricated, pre-piped, pre-wired and/or installed under the supervision and direction of the DPW, City and/or manufacturer's personnel. The Unions agree that such materials, equipment and systems shall be installed without the occurrence of any conduct described in Sections 4.1 or 4.2.

ARTICLE XVI

SAFETY, PROTECTION OF PERSON AND PROPERTY

16.1 It shall be the responsibility of each C/S/E to ensure safe working conditions and employee compliance with any safety rules contained herein or established by the DPW, City, the state and the C/S/E. It is understood that the employees have an individual obligation to use diligent care to perform their work in safe manner and to protect themselves and the property of the C/S/E, the City and the DPW.

16.2 Employees shall be bound by the safety, security and visitor rules established by the C/S/E and the DPW. These rules will be published and posted in conspicuous places throughout the work site. An employee's failure to satisfy his or her obligations under this Section will subject him or her to discipline, including discharge.

16.3 The Parties acknowledge that the City and the C/S/E have a policy, which prohibits the use, sale, transfer, purchase and/or possession of a controlled substance, alcohol and/or firearms while on the City's premises. Additionally, the C/S/E has a "drug free" work place policy, which prohibits those working on the City's premises from having a level of alcohol in their system, which could indicate impairment, and/or any level of controlled substances (i.e., illegal drugs) in their system.

16.4 To that end, the Parties agree to adopt the Los Angeles/Orange Counties Building and Construction Trades Council Approved Drug and Alcohol Testing Policy, a copy of which is attached hereto as Attachment B which shall be the policy and procedure utilized under this Agreement.

ARTICLE XVII

SAVINGS CLAUSE

17.1 The Parties agree that in the event any article, provision, clause, sentence or work of the Agreement is determined to be illegal or void as being in contravention of any applicable law, by a court of competent jurisdiction, the remainder of this Agreement shall remain in full force and effect. The Parties further agree that if any article, provision, clause, sentence or word of this Agreement is determined to be illegal or void, by a court of competent jurisdiction, the Parties shall substitute, by mutual agreement, in its place and stead, an article, provision, sentence or word which will meet the objections to its validity and which will be in accordance with the intent and purpose of the article, provision, clause, sentence or word in question.

17.2 The Parties also agree that in the event that a decision of a court of competent jurisdiction materially alters the terms of this Agreement such that the intent of the Parties is defeated, then the entire Agreement shall be null and void.

17.3 If a court of competent jurisdiction determines that all or part of the Agreement is invalid and/or enjoins the City or DPW from complying with all or part of its provisions and the Board accordingly determines that the Agreement will not be required as part of an award to a C/S/E, the Unions will no longer be bound by the provisions of Article IV to the extent that such C/S/E is no longer bound. The Unions and their members shall remain bound to Article IV with respect to all other C/S/Es who remain bound to this Agreement, and no action taken by the Unions or their members shall disrupt the work of such C/S/Es.

17.4 The provisions of this Agreement shall not be applicable where prohibited by Presidential Executive Order, Federal or State law, or where the application would be inconsistent with terms and conditions of a grant or a contract with the agency of the United States, State of California, or the instruction of an authorized representative of any of these agencies with respect to any grant or contract.

ARTICLE XVIII

STEWARD

18.1 Each Union shall have the right to designate a working craft employee as steward for each C/S/E employing such craft on the Project. Such designated steward shall be a qualified workman assigned to a crew and shall perform the work of the craft. The steward shall not perform supervisory duties. Under no circumstances shall there be nonworking stewards. Stewards shall be permitted a reasonable amount of time during working hours to perform applicable Union duties related to the work being performed by the craft employees of his/her C/S/E and not to the work being performed by other C/S/Es or their employees.

18.2 Authorized representatives of the Union(s) shall have access to the Covered Project, provided that such representatives fully comply with posted visitor, security, and safety rules and the environmental compliance requirements of the Covered Project, provided that they do not unnecessarily interfere with the employees or cause them to neglect their work. The Contractor recognizes the right of access set forth in this Section and such access will not be unreasonably withheld from an authorized representative of the Union.

ARTICLE XIX

TERM

19.1 This Agreement shall commence upon execution by all Parties (the City of Los Angeles Department of Public Works and the Los Angeles/Orange Counties Building and Construction Trades Council and the Craft Unions signatory to this Agreement) and shall continue in full force and effect from the date of execution by all Parties for a period of ten years. During the term of this Agreement, upon request by either Party or by mutual consent, the Parties will meet to discuss the application of, and their experience with, this Agreement. As a result of any such meeting, the Parties may, but shall not be obligated to, mutually agree to amendments or modification of this Agreement.

19.2 The Agreement shall continue in full force and effect for each covered Project until project acceptance by the Board. Either party desiring to renew, extend or to negotiate changes to this Agreement upon expiration, shall make such intention known to the other party by written notice thereof not less than six (6) months prior to the expiration of this Agreement.

19.3 Any covered Project awarded during the term of this Agreement shall continue to be covered hereunder, until completion of the Project, notwithstanding the expiration date of this Agreement.

IN WITNESS WHEREOF, the Parties hereto have executed this Agreement on the day and year written below. THE UNION OFFICIALS signing this Agreement warrant and represent that they are authorized to collectively bargain on behalf of the organizations whom they represent and the members of such organizations.

COMPANY LETTERHEAD

Date: _____

Mr. John L. Reamer, Jr., Inspector of Public Works
City of Los Angeles
Bureau of Contract Administration
1149 S. Broadway, Suite 300
Los Angeles, CA 90015

PROJECT NAME: _____

Dear Mr. Reamer:

This is to certify that the undersigned Contractor/Subcontractor/Employer (C/S/E) has read and understood the Project Labor Agreement (PLA) entered into by and between the City of Los Angeles Department of Public Works (DPW) and the Los Angeles/Orange Counties Building and Construction Trades Councils and Unions dated _____ and the DPW Public Works Infrastructure Stabilization Policy (Policy). The undersigned C/S/E hereby agrees to comply with all of the terms and conditions of the aforementioned duly signed PLA and DPW Policy.

The undersigned C/S/E acknowledges that compliance with the provisions relating to Local Hire and Transitional Workers (Articles 7.3, 7.6, 7.7 & 7.10), Workforce Referral and Development (Articles 7.1, 7.4, 7.5, 7.8 & 7.10), and Apprenticeship Participation (Article 7.7 & 7.11) is of particular importance.

It is understood that the signing of the Letter of Assent shall be as binding on the undersigned C/S/E as though the C/S/E had signed the DPW PLA and shall require all its subcontractors, of whatever tier, to become similarly bound for all work within the scope of this PLA and the DPW Policy.

This further certifies (per Articles 3, 11.2 & the Policy) that the undersigned C/S/E understands that submission of this Letter of Assent and employment hiring plan will be required prior to the commencement of any work in relation to this contract. Non-submittal of this letter and all required hiring plan documentation may preclude the C/S/E from being approved to work on this project.

This Letter of Assent shall become effective and binding upon the undersigned C/S/E the _____ day of _____, _____, and shall remain in full force and effect until the completion of the above stated project.

Sincerely,
(Name of Construction Company)

By: _____
(Name and Title of Authorized Executive)

BUILDING AND CONSTRUCTION TRADES COUNCIL

APPROVED

DRUG AND ALCOHOL TESTING POLICY

(rev. December 2019)

The Parties recognize the problems which drug and alcohol abuse have created in the construction industry and the need to develop drug and alcohol abuse prevention programs. Accordingly, the Parties agree that in order to enhance the safety of the workplace and to maintain a drug and alcohol-free work environment, individual Employers may require applicants or employees to undergo drug and alcohol testing.

1. It is understood that the use, possession, transfer or sale of illegal drugs, narcotics, or other unlawful substances, as well as being under the influence of alcohol and the possession or consuming alcohol is absolutely prohibited while employees are on the Employer's job premises or while working on any jobsite in connection with work performed under the Project Labor Agreement ("PLA").

2. No Employer may implement a drug testing program which does not conform in all respects to the provisions of this Policy.

3. No Employer may implement drug testing at any jobsite unless written notice is given to the Union setting forth the location of the jobsite, a description of the project under construction, and the name and telephone number of the Project Supervisor. Said notice shall be addressed to the office of each Union signing the CWA. Said notice shall be sent by email or by registered mail before the implementation of drug testing. Failure to give such notice shall make any drug testing engaged in by the Employer a violation of the CWA, and the Employer may not implement any form of drug testing at such jobsite for the following six months.

4. An Employer who elects to implement drug testing pursuant to this Agreement shall require all employees on the Project to be tested. With respect to individuals who become employed on the Project subsequent to the proper implementation of a valid drug testing program, such test shall be administered upon the commencement of employment on the project, whether by referral from a Union Dispatch Office, transfer from another project, or another method. Individuals who were employed on the project prior to the proper implementation of a valid drug testing program may only be subjected to testing for the reasons set forth in paragraphs 5(g)(l) through 5(g)(3) and paragraphs 6(a) through 6(e) of this Policy. Refusal to undergo such testing shall be considered sufficient grounds to deny employment on the project.

5. The following procedure shall apply to all drug testing:

a. The Employer may request urine samples only. The applicant or employee shall not be observed when the urine specimen is given. An applicant or employee, at his or her sole option, shall, upon request, receive a blood test in lieu of a urine test. No employee of the Employer shall draw blood from a bargaining unit employee, touch or handle urine specimens, or in any way become involved in the chain of custody of urine or blood specimens. A Union Business Representative, subject to the approval of the individual applicant or employee, shall be permitted to accompany the applicant or employee to the collection facility to observe the collection, bottling, and sealing of the specimen.

b. An employer may request an applicant to perform an alcohol breathalyzer test, at a certified laboratory only and cutoff levels shall be those mandated by applicable state or federal law.

c. The testing shall be done by a laboratory approved by the Substance Abuse & Mental Health Services Administration (SAMHSA), which is chosen by the Employer and the Union.

d. An initial test shall be performed using the Enzyme Multiplied Immunoassay Technique (EMIT). In the event a question or positive result arises from the initial test, a confirmation test must be utilized before action can be taken against the applicant or employee. The confirmation test will be by Gas Chromatography/Mass Spectrometry (GC/MS). Cutoff levels for both the initial test and confirmation test will be those established by SAMHSA. Should these SAMHSA levels be changed during the course of this Agreement or new testing procedures are approved, then these new regulations will be deemed as part of this existing Agreement. Confirmed positive samples will be retained by the testing laboratory in secured long-term frozen storage for a minimum of one year. Handling and transportation of each sample must be documented through strict chain of custody procedures.

e. In the event of a confirmed positive test result the applicant or employee may request, within forty-eight (48) hours, a sample of his/her specimen from the testing laboratory for purposes of a second test to be performed at a second laboratory, designated by the Union and approved by SAMHSA. The retest must be performed within ten (10) days of the request. Chain of custody for this sample shall be maintained by the Employer between the original testing laboratory and the Union's designated laboratory. Retesting shall be performed at the applicant's or employee's expense. In the event of conflicting test results the Employer may require a third test.

f. If, as a result of the above testing procedure, it is determined that an applicant or employee has tested positive, this shall be considered sufficient grounds to

deny the applicant or employee his/her employment on the project.

g. No individual who tests negative for drugs pursuant to the above procedure and becomes employed on the project shall again be subjected to drug testing with the following exceptions:

1. Employees who are involved in industrial accidents resulting in damage to plant, property or equipment or injury to him/her or others may be tested for drug or alcohol pursuant to the procedures stated hereinabove.

2. The Employer may test employees following thirty (30) days advance written notice to the employee(s) to be tested and to the applicable Union. Notice to the applicable Union shall be as set forth in paragraph 3 above and such testing shall be pursuant to the procedures stated hereinabove.

3. The Employer may test an employee where the Employer has reasonable cause to believe that the employee is impaired from performing his/her job. Reasonable cause shall be defined as being aberrant or unusual behavior, the type of which is a recognized and accepted symptom of impairment (i.e., slurred speech, unusual lack of muscular coordination, etc.). Such behavior must be actually observed by at least two persons, one of whom shall be a supervisor who has been trained to recognize the symptoms of drug abuse or impairment and the other of whom shall be the Job Steward. If the Job Steward is unavailable or there is no Job Steward on the project the other person shall be a member of the applicable Union's bargaining unit. Testing shall be pursuant to the procedures stated hereinabove. Employees who are tested pursuant to the exceptions set forth in this paragraph and who test positive will be removed from the Employer's payroll.

h. Applicants or employees who do not test positive shall be paid for all time lost while undergoing drug testing. Payment shall be at the applicable wage and benefit rates set forth in the applicable Union's Master Labor Agreement. Applicants who have been dispatched from the Union and who are not put to work pending the results of a test will be paid waiting time until such time as they are put to work. It is understood that an applicant must pass the test as a condition of employment. Applicants who are put to work pending the results of a test will be considered probationary employees.

6. The Employers will be allowed to conduct periodic jobsite drug testing on the Project under the following conditions:

a. The entire jobsite must be tested, including any employee or subcontractor's employee who worked on that project three (3) working days before or after the date of the test;

b. Jobsite testing cannot commence sooner than fifteen (15) days after start of the work on the project;

c. Prior to start of periodic testing, a Business Representative will be allowed to conduct an educational period on company time to explain periodic jobsite testing program to affected employees;

d. Testing shall be conducted by a SAMHSA certified laboratory, pursuant to the provisions set forth in paragraph 5 hereinabove.

e. Only two (2) periodic tests may be performed in a twelve (12) month period.

7. It is understood that the unsafe use of prescribed medication, or where the use of prescribed medication impairs the employee's ability to perform work, is a basis for the Employer to remove the employee from the jobsite.

8. Any grievance or dispute which may arise out of the application of this Agreement shall be subject to the grievance and arbitration procedures set forth in the CWA.

9. The establishment or operation of this Policy shall not curtail any right of any employee found in any law, rule or regulation. Should any part of this Agreement be found unlawful by a court of competent jurisdiction or a public agency having jurisdiction over the parties, the remaining portions of the Agreement shall be unaffected, and the parties shall enter negotiations to replace the affected provision.

10. Present employees, if tested positive, shall have the prerogative for rehabilitation program at the employee's expense. When such program has been successfully completed the Employer shall not discriminate in any way against the employee. If work for which the employee is qualified exists, he/she shall be reinstated.

11. The Employer agrees that results of urine and blood tests performed hereunder will be considered medical records held confidential to the extent permitted or required by law. Such records shall not be released to any persons or entities other than designated Employer representatives and the applicable Union. Such release to the applicable Union shall only be allowed upon the signing of a written release and the information contained therein shall not be used to discourage the employment of the individual applicant or employee on any subsequent occasion.

12. The Employer shall indemnify and hold the Union harmless against any and all claims, demands, suits, or liabilities that may arise out of the application of this Agreement and/or any program permitted hereunder.

13. Employees who seek voluntary assistance for substance abuse may not be disciplined for seeking such assistance. Requests from employees for such assistance shall remain confidential and shall not be revealed to other employees or management personnel without the employee's consent. Employees enrolled in substance abuse programs will be subject to all Employer rules, regulations and job performance standards with the understanding that an employee enrolled in such a program is receiving

treatment for an illness.

14. The parties agree to develop and implement a drug abuse prevention and testing program for all apprentices entering the industry.

15. This Memorandum of Understanding shall constitute the only Agreement in effect between the parties concerning drug and alcohol abuse, prevention and testing. Any modifications thereto must be accomplished pursuant to collective bargaining negotiations between the parties.

APPENDIX A: SPECIMEN REPORTING CRITERIA

Initial Test Analyte	Initial Test Cutoff [1]	Confirmatory Test Analyte	Confirmatory Test Cutoff Concentration
Marijuana metabolites (THCA)[2]	50 ng/ml [3]	THCA	15 ng/ml
Cocaine metabolite (Benzoylecgonine)	150 ng/ml [3]	Benzoylecgonine	100 ng/ml
Codeine/ Morphine	2000 ng/ml	Codeine Morphine	2000 ng/ml 2000 ng/ml
Hydrocodone/ Hydromorphone	300 ng/ml	Hydrocodone Hydromorphone	100 ng/ml 100 ng/ml
Alcohol	0.02%	Ethanol	0.02%
Oxycodone/ Oxymorphone	100 ng/ml	Oxycodone Oxymorphone	100 ng/ml 100 ng/ml
6-Acetylmorphine	10 ng/ml	6-Acetylmorphine	10 ng/ml
Phencyclidine	25 ng/ml	Phencyclidine	25 ng/ml
Amphetamine/ Methamphetamine	500 ng/ml	Amphetamine Methamphetamine	250 ng/ml 250 ng/ml

---

[1] For grouped analytes (i.e., two or more analytes that are in the same drug class and have the same initial test cutoff):

Immunoassay: The test must be calibrated with one analyte from the group identified as the target analyte. The cross-reactivity of the immunoassay to the other analyte(s) within the group must be 80 percent or greater; if not, separate immunoassays must be used for the analytes within the group.

Alternate technology: Either one analyte or all analytes from the group must be used for calibration, depending on the technology. At least one analyte within the group must have a concentration equal to or greater than the initial test cutoff or, alternatively, the sum of the analytes present (i.e., equal to or greater than the laboratory's validated limit of quantification) must be equal to or greater than the initial test cutoff.

[2] An immunoassay must be calibrated with the target analyte, 9-tetrahydrocannabinoJ-9- carboxylic acid (THCA).

[3] **Alternate technology (THCA and benzoylecgonine):** The confirmatory test cutoff must be used for an alternate technology initial test that is specific for the target analyte (i.e., 15 ng/ml for THCA, 100 ng/ ml for benzoylecgonine).

MDMA[4]/MDA[5]	500 ng/ml	MDMA MDA	250 ng/ml 250 ng/ml
Initial Test Analyte	Initial Test Cutoff	Confirmatory Test Analyte	Confirmatory Test Cutoff Concentration
Barbiturates	300 ng/ml	Barbiturates	200 ng/ml
Benzodiazepines	300 ng/ml	Benzodiazepines	300 ng/ml
Methadone	300 ng/ml	Methadone	100 ng/ml
Methaqualone	300 ng/ml	Methaqualone	300 ng/ml
Propoxyphene	300 ng/ml	Propoxyphene	100 ng/ml

[4] Methylenedioxymethamphetamine (MDMA)
[5] Methylenedioxyamphetamine (MDA)

ADDENDUM 3

SIDE LETTER OF AGREEMENT
TESTING POLICY FOR DRUG ABUSE

It is hereby agreed between the parties hereto that an Employer who has otherwise properly implemented drug testing, as set forth in the Testing Policy for Drug Abuse, shall have the right to offer an applicant or employee a "quick" drug screening test. This “quick” screen test shall consist either of the “ICUP” urine screen or similar test or an oral screen test. The applicant or employee shall have the absolute right to select either of the two “quick” screen tests, or to reject both and request a full drug test.

An applicant or employee who selects one of the "quick" screen tests, and who passes the test, shall be put to work immediately. An applicant or employee who fails the "quick" screen test, or who rejects the "quick" screen tests, shall be tested pursuant to the procedures set forth in the Testing Policy for Drug Abuse. The sample used for the "quick" screen test shall be discarded immediately upon conclusion of the test. An applicant or employee shall not be deprived of any rights granted to them by the Testing Policy for Drug Abuse as a result of any occurrence related to the “quick” screen test.

CITY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
BUREAU OF CONTRACT ADMINISTRATION
REQUEST/VERIFICATION FOR CRAFT EMPLOYEES

(*Project:* _____)

INSTRUCTIONS

To the Contractor:

Please complete and fax this form to the applicable union to request craft workers that fulfill all hiring requirements for the City of Los Angeles project. After faxing your request, call the Local to verify receipt and substantiate their capacity to furnish local, transitional or general dispatch as requested. Contact information for Locals is listed on back of form. Please print your Fax Transmission Verification Report and keep a copy of this request for your records.

To the Union:

Please complete the "Union Use Only" section and fax form back to the requesting contractor. Retain form for your records.

To:	Local	Fax# ( )	Date:
From – Company Name			
Person Sending:		Contact Phone: ( )	

Please provide me with union craft workers per the City of Los Angeles Department of Public Works PLA that fulfills the requirements for this project as defined below:

30% Local Requirement (Union craft employees, including apprentices, who reside in the local metropolitan area zip codes listed below. If unavailable, can be dispatched from any one of the zip codes listed in Attachment).

SEE ATTACHED TIER 1 AND TIER 2 ZIP CODES

10% "Transitional Worker" Requirement (Union craft employees, including apprentices, who live in one of the zip codes listed in Attachment, and are certified to fulfill the "Transitional worker" hiring requirement).

General Dispatch (Union craft employees dispatched per normal dispatch procedures, not including the 30% Local or 10% Transitional Worker requirements)

Employee Name	Address	Zip Code

Craft Employees Requested						
Job/Craft Description	Journeyman / Apprenticeship Level	Number(s) Requested			Report Date	Report Time
		30% Local	10% Transitional	General Dispatch		

Total Workers Requested_____

Please have worker(s) report to the following address indicated below:

Site Address: _____ **Report to (On-Site Contact):** _____

On-Site Tel.#: ( ) **Fax: ( )** _____

Comments or special requirements:

Union Use Only

(Fax the Completed Form Back to Contractor)

ADDENDUM 3

City of Los Angeles

Department of Public Works

Public Works Infrastructure Stabilization Policy

Project Labor Agreement

2020 - 2030

Department of Public Works

RESOLUTION NO. _____

RESOLUTION ADOPTING A POLICY REGARDING PUBLIC WORKS INFRASTRUCTURE STABLIZATION

WHEREAS, the Department of Public Works continues to lead the way to advance, achieve and maintain the City's vital infrastructure facilities, resources and services through its Capital Improvement Program (CIP) that serve over four million residents covering a geographic area of 465 square miles; and

WHEREAS, the Department of Public Works is responsible for the engineering, design and construction of municipal facilities affecting the public right of way and public properties as well as the maintenance and repair of the City's streets, street lighting systems, medians, embankments, roadways and bridges that provide safety for pedestrians, vehicles and the safe flow of goods and services throughout the City; and

WHEREAS, the Department of Public Works is responsible for the collection, treatment, disposal and recycling of sewage, urban runoff, refuse and household hazardous waste; and

WHEREAS, the Department of Public Works protects the City and public interest by ensuring that all public works projects are constructed and administered in accordance with the plans, specifications, contract provisions, and necessary safety provisions in the project sites; and

WHEREAS, the successful completion of covered projects is also of utmost importance to the Department of Public Works and the general public in the City and as such the Project Labor Agreement will facilitate the prompt, safe and on-time delivery of projects within the Department of Public Works' CIP; and

WHEREAS, the work to be done will require maximum cooperation from the many parties who will be involved to mitigate the negative impact to the public right of way, minimize the disruptions to City residents that affect quality of life and ensure timely completion of public work projects; and

WHEREAS, it is recognized that projects of a certain magnitude with multiple contractors and bargaining units on the job site at the same time over an extended period of time create the potential for work disruption without an overriding commitment to maintain continuity of work; and

WHEREAS, the interests of the general public, the City, the unions, contractors, subcontractors, employers and workers will be best served when construction work proceeds in an orderly manner free of disruption caused by strikes, sympathy strikes, work stoppages, picketing, lockouts, slowdowns or other interferences; and

WHEREAS, the PLA will provide a pool of skilled craft workers to help ensure the delivery of quality and safe projects; and

WHEREAS, the Department of Public Works (DPW) has adopted a departmental Project Labor Agreement (PLA) which will provide construction employment and training opportunities in ways calculated to mitigate the harms caused by geographically concentrated poverty, unemployment and underemployment in concentrated poverty neighborhoods; and

WHEREAS, employment of City residents in high unemployment and/or Concentrated Poverty Neighborhood areas affects the City as a whole and positively impacts the social wellbeing of residents and to that end, the City has taken action to promote City residents receiving employment opportunities at City public work projects; and

WHEREAS, increasing access to employment opportunities with prevailing wages is one way for the City to directly combat poverty and stimulate economic reinvestment; and

WHEREAS, the DPW-PLA is not intended to have an adverse impact on the policy of the City to maximize business opportunities for minority, women and other business enterprises in City contracts; and

WHEREAS, the DPW-PLA reflects a commitment by all parties to the diversity in the workforce hiring that reflect levels of minority, women and other worker utilization at levels which are representative of the relevant workforce of these groups in the Greater Los Angeles Area as determined by the U.S. Census Bureau; and

WHEREAS, the DPW-PLA is in accordance with City policies to ensure discrimination-free, diverse and equitable workforce hiring practices; and

WHEREAS, the DPW-PLA will help advance the skills of the local labor pool, especially the youth, by maximizing opportunities to be indentured into federal- and/or state-certified joint labor/management apprenticeship programs; and

WHEREAS, the Department of Public Works through the PLA, seeks to create career opportunities through apprenticeship participation, retention, and graduation; and

WHEREAS, the Board of Public Works wishes to adopt a policy to promote the above objectives and protect the proprietary interests described above.

NOW, THEREFORE, BE IT RESOLVED BY THE BOARD OF PUBLIC WORKS OF THE CITY OF LOS ANGELES, CALIFORNIA,

AS FOLLOWS:

The Department of Public Works (DPW) adopts the following Public Works Infrastructure Stabilization Policy:

SECTION I. DEFINITIONS

1. "Apprentice" means any worker who is indentured in a bona fide Labor/Management construction apprenticeship program, registered and approved by the State of California Department of Industrial Relations, Division of Apprenticeship Standards (DAS) or in the case of Projects with federal funding, indentured in a bona fide Labor/Management apprenticeship program approved by the US Department of Labor (DOL) and California DAS.

2. "Apprenticeship Program" means any Labor/Management construction apprenticeship program certified and approved by the California DAS or in the case of Projects with federal funding, approved by the US Department of Labor (DOL) and California DAS.

3. "Awarding Authority" means any board or commission of the City, or any employee or officer of the City that is authorized to award or enter into any contract on behalf of the City.

4. "Board" means the City of Los Angeles Board of Public Works.

5. "Bureau of Contract Administration (BCA)" means the designated bureau within the City's DPW responsible for administering this Agreement.

6. "City" means the City of Los Angeles, a municipal corporation, and all City Awarding Authorities.

7. "Construction Contract" means a City contract which has been certified by the City Controller, awarded by the Board, and is necessary to complete the DPW Project.

8. "Contractor/Subcontractor/Employer (C/S/E)" means any individual firm, partnership, owner operator, or corporation, or combination thereof, including joint ventures, which is an independent business enterprise and which has entered into a contract with the DPW or any of its contractors or subcontractors/owner operators of any tier, with respect to the construction of any part of a Covered Project.

9. "Core Worker" means a verifiable member of a C/S/E's core workforce for the purpose of the DPW-PLA and this Policy if the worker's name appears on the C/S/E's active payroll for 60 of 100 working days immediately prior to award of the construction contract and meets all standards required by applicable local, state or federal law or regulation.

10. "Covered Project(s) or Project" means a project or projects which have been included within the Public Infrastructure Program Series (PIPS) and covered by the DPW-PLA or so designated by the Board of Public Works. The Board may identify additional projects that are appropriate for coverage by the DPW-PLA and the Policy by Board resolution.

11. "Craft Request Form" means the document through which a C/S/E shall request workers from the Union and/or Jobs Coordinator, in the form set forth in the DPW-PLA and/or Policy.

12. "Transitional Worker" means an individual whose primary place of residence is within the City of Los Angeles and who prior to commencing work on a Project has been certified as

satisfying at least one of the following criteria: (1) having Veteran status; having a documented history of involvement with the criminal justice system; or being homeless. If the Jobs Coordinator or Employer is not able to identify anyone using criteria (1), criteria (2) may be used. Criteria (2) is an individual that is either a graduate of an LA/OCBTC approved MC3 pre-apprenticeship program or facing two of the following barriers to employment: having a household income less than 50% of the Los Angeles County's median annual household income, receiving public assistance, lacking a GED or high school diploma, being a custodial single parent, suffering from long-term unemployment, being emancipated from the foster care system, or being an apprentice with less than 15% of the apprenticeship hours required to graduate to journey level in a program.

13. "DPW-PLA" means the Project Labor Agreement entered into between the Department of Public Works and Unions, applicable to Covered Projects.

14. "Employment Hiring Plan" (EHP) means a C/S/E's detailed hiring plan in achieving the targeted hiring percentages as described in Article 7 of the DPW-PLA and Policy.

15. "Engineer" means the City Engineer or his/her authorized representative.

16. "FHWA Project" means a DPW Project that is funded in whole or in part by the Federal Highway Administration (FHWA).

17. "Public Infrastructure Program Series List (PIPS) means all projects contained in the adopted PIPS (Attachment E of the DPW-PLA), along with any other projects, as approved by the Board of Public Works, that will operate under the DPW-PLA.

18. "Jobs Coordinator" means the Prime Contractor's designated person, agent or agency that will facilitate the local hire referral process with the C/S/E, Unions and other referral organizations.

19. "LA/OCBTC" (Trades Council) means the Los Angeles /Orange Counties Building and Construction Trades Council.

20. "Letter of Assent" means the document that each C/S/E (of any tier) must sign and submit to the City's Inspector of Public Works, which formally binds them to adherence to all the forms, requirements and conditions of the DPW-PLA and Policy.

21. "Liquidated Damages" means disputed funds withheld from the Prime Contractor until they are found to be in compliance, the contract is terminated, or the Covered Project is completed.

22. "Local Resident" means an individual whose primary residence is within Tier 1 or 2 zip code areas. The following are acceptable forms of proof of residency: (i) Copy of a current residential lease with the eligible household member's name listed on it; or (ii) Valid driver's license or State ID card with a City of Los Angeles address; or (iii) Medical card with current address; or (iv) Utility bill with eligible household member's name on it; or (v) Voter's registration card; or (vi) Other proof of residence address deemed acceptable by BCA.

23. "Long-Term Unemployment" as defined by the Bureau of Labor Statistics means being jobless for 27 weeks or more, or as defined.

24. "Policy" means the DPW Public Works Infrastructure Stabilization Policy.

25. "Project Work" means construction work performed as part of a Covered Project.

26. "Prime Contractor" means any individual firm, partnership, owner-operator, or corporation, or combination thereof, including joint-ventures, that is an independent business enterprise and that has entered into a Construction Contract.

27. "Reporting Period" means the BCA's indicated reporting period for measuring the targeted hiring efforts of the C/S/E(s). These reporting periods shall be at the BCA's determination of 10%, 30%, 50%, 70% and 90% construction completion phases.

28. "Tier 1" means the zip codes within the City, identified in Article 7.4 of the DPW-PLA, having at least 2 census tracts (or portion thereof) in which the median household income is less than 50% of the County of Los Angeles' median annual household income, and/or where the unemployment rate exceeds 200% of the County of Los Angeles' unemployment rate as reported by the most recent available U.S. Census Bureau data.

29. "Tier 2" means zip codes within the City, identified in Article 7.5 of the DPW-PLA, having at least 2 census tracts (or portion thereof) in which the median household income is less than the County of Los Angeles' median annual household income, and/or where the unemployment rate exceeds 100% of the County of Los Angeles' unemployment rate as reported by the most recent U.S. Census Bureau data.

30. "Underemployment" means a situation in which a worker (i) is employed only part-time when one needs and desires full-time employment, and/or (ii) is inadequately employed at a low-paying job that requires less skill or training than one possesses.

31. "Unemployment" means, in accordance with the Bureau of Labor Statistics definition, a situation in which a person does not have a job, has actively looked for work in the prior 4 weeks, and is currently available for work and chronic Unemployment means unemployment lasting 27 weeks or longer.

32. "Union(s)" or "Signatory Unions" means the Los Angeles/Orange Counties Building and Construction Trades Council affiliated with the Building & Construction Trades Department (AFL/CIO) Craft International Unions or any other craft labor organization signatory to the DPW-PLA, acting in their own behalf and on behalf of their respective affiliates and member organizations whose names are subscribed in the DPW-PLA and who have through their officers executed the DPW-PLA.

SECTION II. COVERAGE OF PROJECTS

1. Covered Projects: Except as provided otherwise herein, this Policy applies to all projects contained in the Public Infrastructure Programs Series List, awarded by the Board, and covered by the DPW-PLA. The Board may designate additional projects for coverage under the Policy and DPW-PLA based on specific findings that coverage will advance the City's legitimate proprietary and policy interests and promote the public interest in assuring completion of the project in question in a safe and cost-effective manner while minimizing or negating any adverse impact to the public welfare.

2. FHWA Projects: In the event that DPW determines that a project to which this Policy applies is an FHWA project, DPW shall modify or not enforce any aspect of the Policy or DPW-PLA in accordance with a valid and binding instruction from the U.S. Department of Transportation.

SECTION III. IMPLEMENTATION

Prior to bid, DPW staff shall review each Covered Project's bid specifications to ensure the following provisions are incorporated:

1. That the Request for Bid Package Authorization from the Board specifies that the Covered Project contains the DPW-PLA and Policy;

2. That the Bid specifications require all contractors submitting bids or proposals agree to the terms of the DPW-PLA and Policy;

3. That a provision exists in the prime contract obligating the Prime Contractor and all its C/S/Es (of any tier) to comply with the terms of the DPW-PLA and Policy and/or require compliance with the DPW-PLA and Policy terms through a Letter of Assent or any other form or legally enforceable obligation to the City.

4. That the Construction Contract shall include provisions establishing liquidated damages amounts as described in Section VIII of this Policy.

SECTION IV. EXCLUSIONS AND/OR MODIFICATIONS

1. Funding Source: this Policy shall not apply to DPW construction contracts or projects, if the funding source has established provisions or rules that forbid the inclusion of a PLA and/or Local Hire provision. If the project is listed as part of the PIPS, DPW staff must present the reason(s) to the Board prior to final determination to exclude the Covered Project.

2. This Policy shall not apply to work performed by a C/S/E's executives, managerial employees, engineering employees, supervisors (except those covered by State or Federal Prevailing Wage rates and/or Schedule A collective bargaining agreements), office and clerical employees, or any other employee not performing construction craftwork.

3. Out-of-State Workers: hours worked by residents of states other than California shall not be included in calculation of total hours of project work for purposes of determining compliance with the Section 5 below.

SECTION V. TARGETED HIRING

1. Requirements for Covered Projects:

   The Prime Contractor shall ensure that the following targeted hiring requirements are met for each Covered Project:

   a) At least 30% of total hours worked on each project shall be performed by Local Residents. For any hour of Project Work for which a C/S/E seeks to meet this 30% requirement, the C/S/E, Unions and the Jobs Coordinator must first refer individuals whose primary place of residence is within a Tier 1 zip code. After Unions, C/S/Es and the Jobs Coordinator have exhausted the available pool of Local Residents whose primary place of residence is within a Tier 1 zip code, they may refer Local Residents whose primary place of residence is within a Tier 2 zip code.

   b) Apprentices must be employed on each project in accordance with the requirements mandated by Section 1777.5 of the California Labor Code. The hours performed by apprentices in each individual craft shall not exceed the ratio to journeyperson established by the applicable craft union's State DAS approved apprenticeship standards. A minimum of 50% of all apprentice hours shall be performed by Local Residents.

   c) At least 10% of total hours worked on each project shall be performed by Transitional Workers residing within Tier 1 or Tier 2 zip code areas described in Articles 7.4 and 7.5 of the DPW-PLA respectively and the remaining zip codes within the City of Los Angeles. Hours of project work performed by Transitional Workers may be applied towards the 30% requirement of the DPW-PLA and/or this Policy. Additionally, apprentice work hours performed by Transitional Workers may be applied towards the 50% local apprentice requirement of the DPW-PLA.

SECTION VI. RESPONSIBILITIES OF BCA, C/S/Es, UNIONS, and JOBS COORDINATOR

1. BCA Responsibilities:

   a) Monitor and enforce the targeted hiring measures of the DPW-PLA and Policy and issue Notices of Non-Compliance where appropriate.

   b) Review, approve or disapprove submitted Employment Hiring Plans prior to a C/S/E(s)' estimated start of work. Approval of a C/S/E to work on a Covered Project is contingent on the C/S/E(s)' submittal of an approved EHP plan.

c) Ensure, prior to a C/S/E's approval to work on a Covered Project, its submittal of a duly signed Letter of Assent.

d) Ensure targeted hiring dashboards for Covered Projects on the BCA website (http://bca.lacity.org/pla_documents) are accurate and reflective of the most recent data received from C/S/E(s) and Jobs Coordinators.

e) Conduct timely Reporting Period Meetings for Covered Projects with C/S/E(s) and Jobs Coordinators.

f) Report to the Board on a quarterly basis the status of all Covered Projects, or as otherwise directed by the Board.

g) Determine the withhold amount from payment(s) as disputed funds and make recommendation(s) for assessment of Liquidated Damages.

2. Prime Contractor and C/S/Es:

a) Employment Hiring Plan (EHP): Prime Contractor shall ensure that its C/S/Es (of any tier), at least 20 business days prior to starting their work on the Covered Project, shall submit their plan(s) to the BCA for approval by the BCA Director or his/her designee. Each C/S/E shall also complete an EHP Acknowledgement that describes how it will meet the targeted hiring requirements set forth in the DPW-PLA and Policy. No C/S/E (of any tier) shall be approved to work on a Covered Project without an approved EHP.

b) PLA and Policy: Prime Contractor shall ensure that its C/S/Es (of any tier), prior to start of work, (i) read and understand the requirements of the DPW-PLA and Policy; (ii) submit their Employment Hiring Plans at least 20 business days prior to their subcontractors' start of work and (iii) sign and submit their Letters of Assent prior to start of work. No C/S/E (of any tier) shall be approved to work on a Covered Project without having submitted a signed Letter of Assent.

c) Prior to start of work on the project, the Prime Contractor shall:

- Recommend a Jobs Coordinator for approval by the BCA.
- Upon BCA's approval of its Jobs Coordinator, notify its subcontractors (of any tier) who the Jobs Coordinator is.
- Provide within 10-calendar days upon request by the BCA or its designated representative, documentation of their Jobs Coordinator's qualifications.

d) The Prime Contractor and its C/S/Es (of any tier) shall coordinate with the Jobs Coordinator for services to support their efforts in meeting the targeted hiring percentages as described in Article 7 of the DPW-PLA and the Policy.

e) Pre-Job Conference: The Prime Contractor and its C/S/Es (of any tier), prior to start of work, shall hold a pre-job conference. The purpose of the pre-job conference is to determine craft personnel needs, schedule of work for the contract and all other matters as described in the DPW-PLA and the Policy. All work assignments shall be disclosed by the Prime Contractor and/or C/S/Es (of any tier) at the pre-job

conference. Any formal jurisdictional dispute(s) raised under Article 14 of the DPW-PLA must be raised at the pre-job conference upon disclosure of the work assignments. If the Prime Contractor and/or C/S/Es intend to change the work assignment after the pre-job conference or to make an assignment of work not previously known, the Prime Contractor and/or C/S/Es must notify the appropriate affected craft union(s) prior to the commencement of work.

f) Craft Request Form: The Prime Contractor and its C/S/Es (of any tier) shall only use the Craft Request Form (Attachment "C" of the DPW-PLA) and the procedures written therein to request workers from the affected Union(s). All C/S/Es must transmit a concurrent Craft Request transmittal of such request to the Jobs Coordinator.

g) The Prime Contractor and its C/S/Es (of any tier) must satisfactorily document their contact with the Jobs Coordinator when the Unions have not been able to refer a Local Resident and/or Transitional Worker within the 48-hour window of referral.

h) The Prime Contractor and its C/S/Es (of any tier) shall maintain proof of transmittal of the Craft Request forms to the Union hiring halls and Jobs Coordinator. Upon request by the BCA or its designated representative, copies shall be provided within 10-calendar days of request.

i) The Prime Contractor and its C/S/Es (of any tier) shall make available to the BCA or its designated representatives records and information that are deemed relevant to monitoring and enforcement of the provisions of the DPW-PLA and the Policy.

j) The Prime Contractor and its C/S/Es (of any tier) shall cooperate fully and promptly with any inquiry or investigation the BCA or its designated representatives deem necessary in order to monitor compliance with the provisions of the DPW-PLA and the Policy.

k) The Prime Contractor and its C/S/Es (of any tier), within 60 calendar days after concluding work on the Covered Project, shall submit to the BCA a verified statement of the number of journeypersons and apprentices who worked on the project, their classifications and the hours worked. (Per California Labor Code 1777.5(e).)

Upon request of the BCA or its designated representatives, the Prime Contractor and its C/S/Es (of any tier) must provide documentation of their Local Resident, Apprentice and Transitional Workers targeted hiring participation level efforts within 10-calendar days of the request for documentation.

3. Union Responsibilities:

a) Ensure that its dispatchers properly adhere to the use of the Craft Request Form and the procedures written therein.

b) Refer Local Residents and/or Transitional Workers requested through the Craft Request Form, regardless of their place on the hiring hall list and normal referral procedures.

c) Exert their best efforts to recruit and identify Local Residents residing in Tier 1, and then Tier 2 zip code areas, as well as those referred by the Jobs Coordinator for entrance, indentureship into a union apprenticeship program, and assisting such individuals in graduating into eligible journeypersons.

d) Upon receiving a request from a C/S/E for a Local Resident, exhaust the available list of individuals residing the Tier 1 zip codes before referring an individual residing in the Tier 2 zip codes.

e) Track retention of Local Residents and/or Transitional Worker apprentices participating in joint Labor/Management apprenticeship programs and provide BCA with the necessary information as requested.

4. Jobs Coordinator:

a) Criteria for Selecting a Jobs Coordinator: The Jobs Coordinator plays an integral part in the success of its partners in obtaining the targeted hiring percentages. It is the responsibility of the Prime Contractor to designate a Jobs Coordinator possessing, but not limited to, the following demonstrable experience and qualifications:

i. Developing, creating, designing and marketing specific programs targeting Local Residents and/or Transitional Workers for construction opportunities at the Covered Project (e.g. handouts and fliers for "walk-ins" demonstrating program entrance procedures).

ii. Coordinating services for contractors to assist in their local worker, transitional worker and apprentice utilization.

iii. Educating and assisting contractors on incentives provided by State or federal programs for On-the-Job Training and employer tax credits.

iv. Conducting orientations, job fairs and community outreach meetings to the local community.

v. Providing supportive services such as skills training, child care, transportation, education remediation, assistance with union fees and tools.

vi. Screening and certifying the transitional (formerly known as disadvantaged) status of workers.

vii. Establishing a referral and retention tracking mechanism for placed local and/or transitional workers and apprentices.

viii. Networking with the various Work Source Centers, community and faith based organizations and other non-profit entities that provide qualified local workers and/or transitional workers.

ix. Liaising with the various building trades crafts for referral and placement of local hire and/or transitional workers.

b) Jobs Coordinator Affirmation. While not mandatory, it is strongly suggested that each covered project employ a Jobs Coordinator.

i. The BCA will affirm the Jobs Coordinator on an individual project basis, utilizing its existing Jobs Coordinator review process.

ii. The review process consists of BCA reviewing the Jobs Coordinator's requisite experience and qualifications to assist the DPW-PLA's covered project to meet, if not exceed the targeted hiring requirements.

c) Jobs Coordinator Responsibilities. On each covered project in which they are employed, the Jobs Coordinator shall:

i. Coordinate the covered project's local hire referral process with the C/S/Es, Unions, City Work Source Centers, Faith and Community Based Organizations, and other organizations that can provide qualified local hire referrals.

ii. Coordinate the covered project's overall hiring process with all C/S/Es to help ensure that no PLA hiring and referral violations occur and the targeted hiring requirement percentages remain in compliance.

iii. Certify any Transitional Worker's status and maintain written proof of that certification for the duration of the covered project.

iv. Maintain a database of pre-qualified local residents for referral to work on a Covered Project and/or indentureship into a bona fide Labor/Management apprenticeship program.

v. Facilitate relationships among approved MC3 pre-apprenticeship and apprenticeship programs and the C/S/Es' to enable prompt referral.

vi. Be the point of contact to provide information about available job opportunities.

vii. Educate and provide financial incentives information to the C/S/Es' who hire eligible workers under Work Opportunity Tax Credit (WOTC) and On-the-Job Training (OJT) and other benefits for which a C/S/E may be eligible based on their implementation of the Local Hire requirements.

viii. Coordinate the C/S/Es' local hire effort documentations and other reports as it relates to their Local Resident and/or Transitional Worker targeted hiring requirements.

ix. Work closely with BCA staff, the building trades and C/S/Es in achieving the targeted hiring.

x. Attend all mandatory DPW-PLA related meetings, including, but not limited to Pre-Bid Conferences, Quarterly Jobs Coordinator meetings and Reporting Period Meetings. Jobs Coordinators will be individually notified when any scheduled meeting has been designated as mandatory.

Parties with responsibilities under the DPW-PLA and/or Policy, shall maintain those responsibilities regardless of the performance of the Jobs Coordinator at the tasks described in the DPW-PLA and the Policy.

SECTION VII. COMPLIANCE

The BCA or its authorized representatives shall determine whether a Prime Contractor and its C/S/Es have complied with the requirements of the DPW-PLA and the Policy. The Prime Contractor is ultimately responsible for it and its C/S/Es (of any tier) compliance with the DPW-PLA and Policy requirements.

1. If, after taking into account all hours of project work performed up to that point in time of the Reporting Period, the targeted hiring requirements of the DPW-PLA and Policy have been satisfied for a Covered Project, then the Prime Contractor and its subcontractors (of any tier) working on that Covered Project shall be deemed to be in compliance.

2. If the targeted hiring requirements of the DPW-PLA and the Policy have not been satisfied for a Covered Project, the Prime Contractor nonetheless may be deemed to be in compliance if it demonstrates both (a) that it and each of its C/S/Es (of any tier) have complied with all other requirements of the DPW-PLA and the Policy, and (b) that it and each C/S/E (of any tier) have either (i) satisfied the targeted hiring requirements of the DPW-PLA and this Policy with regard to the project work that it has performed or (ii) satisfactorily demonstrated the following:

    a) Adherence to procedures contained in its Employment Hiring Plan as approved by the BCA.

    b) Requests to Unions, through Craft Request Forms, of sufficient numbers of Local Residents and Transitional Workers.

    c) Documented contact with the Jobs Coordinator in each instance when the relevant Union did not refer qualified Local Residents or Transitional Workers within the 48 hours following the C/S/E's request and the C/S/E's fair consideration of any Local Resident or Transitional Worker subsequently referred by the Jobs Coordinator.

    d) Accurate records documenting the C/S/E's compliance efforts that include (but not limited to):
        i. A listing by name and address of all local recruitment sources contacted by the C/S/E;

        ii. The date of the local recruitment contact and the identity of the person contacted, the trade and classification and number of hire referrals requested;

iii. The number of Local Residents and/or Transitional Workers hires made as a result of the contact;

iv. The identity and address of the worker(s) hired pursuant to the contact;

v. Documentation when a referral was not hired (reason for non-hire) and/or premature termination.

3. Any Covered Project that fully satisfies the terms and conditions of this section will be deemed to have complied with the PLA's Targeted Hiring Requirements and will not be subject to Liquidated Damages. Furthermore, the employed Jobs Coordinator's Affirmation status will not be affected.

SECTION VIII. ENFORCEMENT

The Prime Contractor for every Covered Project agrees:

1. To be liable to the City for Liquidated Damages as provided in this section;

2. That the Prime Contractor and its C/S/Es (of any tier) commitment to comply with the targeted hiring requirements of DPW-PLA and Policy is a material element of the Covered Project;

3. That the failure of the Prime Contractor and its C/S/Es (of any tier) to comply with the targeted hiring requirements will cause harm to the City and the public which is significant and substantial but extremely difficult to quantify. The harm to the City includes the difficult-to-quantify harm that the community and its families suffer as a result of high unemployment and concentrated poverty;

4. Liquidated Damages: Due to the difficulty of estimation of damages for violation(s) of requirements of this Policy, Construction Contracts shall have provisions establishing liquidated damage to be assessed as follows:

   a) The Prime Contractor shall pay liquidated damages equal to the average journeyperson project wage for each hour the Covered Project fell short of the targeted hiring, or $500 per day, whichever is greater.

   b) If the Covered Project's targeted hiring requirements are out of compliance during any Reporting Period, the Prime Contractor shall meet with the BCA to develop a plan for compliance. The Prime Contractor has until the next Reporting Period to effectuate compliance or Liquidated Damages shall be withheld.

   c) Before Liquidated Damages are sought, the Prime Contractor shall be notified of the proposed Liquidated Damages and served with a summary of the information upon which the Liquidated Damages are based.

   d) Liquidated Damages shall be withheld from all subsequent monthly progress payment request(s) as disputed funds until such time as Prime Contractor is found

to be in compliance, the Covered Project contract is terminated, or the Covered Project is completed.

e) Should the Covered Project be terminated or completed before the Prime Contractor is found to be in compliance, recommendation shall be made to the Board to assess Liquidated Damages and the amount of the Liquidated Damages shall be returned to the fund from whence they came.

5. Liquidated Damages Appeal:

a) The Prime Contractor may appeal the assessment of Liquidated Damages before the Board. Prior to the Board hearing to address assessment of Liquidated Damages, the Prime Contractor shall be provided a summary of the information upon which the recommendation assessment is based.

b) The Prime Contractor must request an appeal in writing within 10-calendar days of receipt of the Liquidated Damages assessment summary. At the Board hearing to determine assessment of Liquidated Damages, the Prime Contractor will be allowed to provide evidence that it has made all of the showings required under Section VII of the Policy. Failure to submit a written request for an appeal within the time frame stipulated in this Section will be deemed a waiver of the right to appeal and the recommendation for assessment of Liquidated Damages will be implemented.

6. Termination of Contract(s): Consistent, substantial violations of the DPW-PLA and/or Policy by any Prime Contractor and/or C/S/E may result in a recommendation to the Board that the contract of the offending Prime Contractor and/or C/S/E be terminated per Section 00405 of the Master General Conditions.

SECTION IX. APPLICABLE LAW AND SEVERABILITY

The provisions of this Policy shall not be applicable where prohibited by federal or state law, or where the application would violate or be inconsistent with the terms and conditions of a grant or a contract with an agency of the United States or the State of California, or the valid instructions of an authorized representative of any of these agencies with respect to any grant or contract. If enforcement of any provision of this Policy is enjoined by a court of competent jurisdiction, the remaining provisions shall remain in full force and effect.

I. Introduction

The BOE project manager introduced City staff and informed participants to provide their information in order to record attendance.

II. General Project Overview

A description of the three projects was provided, including City Engineer's estimate, liquidated damages, project duration, and interim milestone.

The Sixth Street Viaduct PARC project will develop a new 12-acre park underneath and adjacent to the Sixth Street Viaduct from Mateo Street on the west to the US101 freeway to the east. The park features walking/jogging paths, dog parks, restroom buildings, Rec & Park staff building, cafe building, performance arts plaza, adult fitness equipment, synthetic soccer field, multi-purpose fields, basketball court, children's mister area, picnicking/grilling areas, general landscaping and irrigation, fencing, lighting, and tunnel improvements.

The Dept. of Cultural Affairs LA Hands Art Piece Foundations project will construct the two foundations to support the commissioned artist's art work.

Rehabilitate approximately 477 linear feet of existing 36-inch circular sewers in the Central Business District by ultra violet cured-in-place pipe (UV CIPP). The alignment of the reach begins at the 6th Street Siphon outlet structure continuing west on 6th Street towards Santa Fe Avenue, then south on Santa Fe Avenue. Rehabilitate 6th Street Siphon outlet structure and existing maintenance holes.

City Engineer's Estimate: $36,979,003.00
Duration: 730 calendar days
Liquidated Damages: $5,000 per day
Interim Milestone: 555 calendar days.
Interim Milestone Liquidated Damages: $12,000 per day
Refer to the General Requirements Section 01112 for detailed information regarding the interim milestone.

III. Bureau of Contract Administration

A. Business Inclusion Program

Lisa Adams from the Bureau of Contract Administration (BCA) described the Business Inclusion Program (BIP) and explained the steps to fulfill the BIP obligations. Questions can be sent to bca.biphelp@lacity.org

B. Project Labor Agreement

John Butler from BCA discussed the Project Labor Agreement (PLA) that will be implemented for this project and provided information on how it will evaluate labor compliance. Questions can be sent to ocps.help@lacity.org

IV. Contractor Development Technical Assistance and Bonding Assistance

Elizabeth Juarez from Merriwether & Williams presented the various resources it has available to assist contractors for technical development and bonding assistance. Questions can be addressed to Elizabeth at ejuarez@imwis.com.

V. Questions

The meeting was opened for questions. None were received. The project manager informed the group to submit technical questions as Requests for Information (RFI) which will be addressed via an addendum. Send questions to gary.lam@lacity.org.

Meeting Adjourned

Bidders are hereby notified of the following changes:

I. MODIFICATIONS TO BID PROPOSAL:

1. **REPLACE AND ADD** the plan sheets in Attachment No. 9 with the **attached revised Attachment 9**. (526 pages)

2. **REPLACE** Section **F of the Important Notice to read as follows:**

F. CONTRACTOR PARTICIPATION

The Prime Contractor shall perform, with its own organization, contract work amounting to at least **35%** of the contract price. Any items designated as specialty items by the City and performed by Subcontractors shall be deducted from the contract price before computing the amount of the work required to be performed by the Prime Contractor with its own forces. This percentage shall be based upon the original contract price, exclusive of specialty items performed by Subcontractors, but include the cost of materials and manufactured products purchased or produced by the Prime Contractor.

Sincerely,

_____

ADDENDUM 5

NOTICE TO CONTRACTORS

1. SPECIFICATIONS: ALL WORK SHALL CONFORM TO THE LATEST EDITION AND SUPPLEMENTS OF "THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION" (GREENBOOK), AND THE CORRESPONDING "ADDITIONS AND AMENDMENTS TO THE LATEST EDITION OF THE STANDARD SPECIFICATIONS FOR THE PUBLIC WORKS CONSTRUCTION" (BROWN BOOK) AND THE CITY STANDARD PLANS.
2. THIS IMPROVEMENT CONSISTS OF WORK CALLED FOR ONLY ON THIS PLAN.
3. INSPECTION: ALL PUBLIC WORKS CONSTRUCTION AND MATERIAL ARE SUBJECT TO INSPECTION, BY THE CITY OF LOS ANGELES PURSUANT TO SECTION 2-11 OF THE CITY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS (BROWN BOOK), CALL (213) 485-5080 BEFORE NOON OF THE WORKING DAY, BEFORE THE INSPECTION IS REQUIRED.
4. SURVEY MONUMENT PRESERVATION IS REQUIRED, AND SHALL INCLUDE SUBMITTAL OF MONUMENT TIES TO THE ENGINEER, AS NOTED BY SECTION 2-9.3 OF THE "BROWN BOOK".
5. NOTIFICATION:
   AT LEAST TEN (10) DAYS BEFORE THE START OF CONSTRUCTION, THE CONTRACTOR SHALL NOTIFY, IN WRITING, ABUTTING PROPERTY OCCUPANTS OF THE PROPOSED CONSTRUCTION START DATE. A COPY OF SAID WRITTEN NOTIFICATION SHALL BE PROVIDED TO THE INSPECTOR FOR APPROVAL BEFORE THEY ARE DISTRIBUTED TO THE OCCUPANTS OF THE ABUTTING PROPERTY.
6. THE CONTRACTOR SHALL REESTABLISH ALL PERTINENT SURVEY MARKERS AS PER SSPWC 2-9.1.
7. THE CONTRACTOR SHALL PROVIDE AN ALTERNATIVE ACCESSIBLE ROUTE FOR DISABLED PEDESTRIANS WHENEVER AN EXISTING ROUTE IS BLOCKED DUE TO SIDEWALK OR ROADWAY CONSTRUCTION. THE ALTERNATIVE ROUTE SHALL BE PROVIDED AT ALL TIMES EXCEPT AS APPROVED BY THE INSPECTOR OR ENGINEER. THE FOLLOWING TEMPORARY ALTERNATIVES MAY BE EMPLOYED, SUBJECT TO PRIOR APPROVAL BY THE INSPECTOR OR ENGINEER ON A SPECIFIC LOCATION BASIS.
   A. PROVIDE A MINIMUM 5-FOOT WIDE WALK.
   B. PROVIDE TEMPORARY SIGNING WITH A DISABLED ACCESS LOGO POINTING TO AN ALTERNATIVE ACCESSIBLE ROUTE WITHIN 300 FEET.
   C. A 5-FOOT WIDE CLEAR WALKWAY IN A PARKING OR CLOSED CURB LANE, SHALL CONFORM TO THE LATEST CALIFORNIA MUTCD (SEPTEMBER 2006).
   D. TEMPORARY AC CURB RAMPS IN A PARKING OR CLOSED CURB LANE NEXT TO THE CURB. THEY SHALL BE 4-FEET WIDE, PARALLEL TO THE STREET, WITH A 4 FOOT BY 4 FOOT LEVEL CLEAR LANDING AT THE TOP AND A MAXIMUM RAMP SLOPE OF 1:12. ALL PEDESTRIAN DETOURS SHALL CONFORM TO THE LATEST CALIFORNIA MUTCD (SEPTEMBER 2006).
   E. MOVABLE WOODEN CURB RAMPS AS IN "D" ABOVE SHALL HAVE WOODEN OR METAL HAND RAILS ON THE NONRAMP STREET SIDES.
   F. OTHER TEMPORARY ARRANGEMENTS AS THE INSPECTOR OR ENGINEER MAY AUTHORIZE.
8. PAVING: PAVING OF ROADWAY AREAS SHALL BE WITHHELD UNTIL COMPLETED UTILITY CHANGES OR INSTALLATIONS HAVE BEEN MADE UNDER CITY PERMIT. ACWS SHALL NOT BE PLACED UNTIL ALL AC BASE IS PLACED.
9. REPAIR AND/OR REPLACE ANY EXISTING BROKEN OR OFFGRADE CONCRETE CURB, CONCRETE GUTTER OR CONCRETE SIDEWALK AND/OR PAVEMENT IMMEDIATELY ADJACENT TO OR WITHIN THE AREA OF REQUIRED IMPROVEMENTS TO THE SATISFACTION OF THE CITY ENGINEER PER SPECIFICATIONS.
10. CONSTRUCTION STAKES FOR CURB AND LONGITUDINAL GUTTER, WITH GRADE LESS THAN 0.50%, SHALL BE SET 12.5 FEET ON THE CENTER.
11. THE CONTRACTOR IN CONFORMANCE WITH LOS ANGELES CITY ORDINANCE NO. 150,478, SHALL POTHOLE EXISTING SUBSURFACE INSTALLATIONS CARRYING UNSTABLE SUBSTANCES TO DETERMINE THEIR LOCATIONS AND ELEVATIONS PRIOR TO COMMENCING EXCAVATION. NO POWER TOOLS ARE PERMITTED, ECXEPT TO BREAK THE PAVEMENT.
12. THE CURB FACE SHALL BE 8 INCHES OR MATCH THE EXISTING.
13. IN ADDITION TO THE CONSTRUCTION OF PAVEMENT SHOWN HEREON, WORK REQUIRED UNDER THIS PLAN WILL ALSO INCLUDE THE CONSTRUCTION OF PERMANENT TRENCH RESURFACING IN ALL AREAS WHERE UTILITY LINES HAVE BEEN INSTALLED TO SERVE THIS PROJECT. CONDITIONS OF TRENCH BACKFILL AND RESURFACING SHALL BE AS SPECIFIED ON THE EXCAVATION PERMIT.
14. 4" CMB UNDER ALL SIDEWALKS AND CURB RAMPS. CURBS & GUTTERS, DRIVEWAYS, AND PAVEMENT SHALL BE PLACED IN ACCORDANCE WITH CITY STREET DESIGN MANUAL, PER PAVEMENT CALCULATIONS AND AS SHOWN ON TYPICAL CROSS SECTIONS.
15. TEMPORARY AC PAVEMENT SHALL BE PLACED ADJACENT TO ALL CONCRETE EDGES AND OTHER ROUGH AREAS WITHIN THE AREA OF REMOVAL, SO AS TO PROVIDE A SMOOTH SURFACE FOR VEHICULAR TRAFFIC.
16. SIGNS REQUIRED BY THE LADOT WORKSITE TRAFFIC CONTROL PLAN (S-488.0), AND APPROVED SITE SPECIFIC WORKSITE TRAFFIC CONTROL PLANS, THE CONTRACTOR SHALL FURNISH AND POST "ADVANCE NOTICE" CONSTRUCTION SIGNS AS PART OF THIS PROJECT IN ACCORDANCE WITH STANDARD PLAN S-791-1. TRAFFIC CONTROL SIGNS NEED TO BE COORDINATED THROUGH LADOT BEFORE INSTALLATION.
17. REMOVALS:
   A. REMOVE EXISTING IMPROVEMENTS THAT INTERFERE WITH THE CONSTRUCTION OF THIS PROJECT AND COORDINATE WITH ALL OWNERS OF EXISTING FACILITIES.
   B. ALL IMPACTED UTILITIES EXCEPT TRAFFIC SIGNALS AND STREET LIGHTING FACILITIES SHALL BE REMOVED OR RELOCATED ACCORDING TO THE DRAWINGS, EITHER BY THE CONTRACTOR OR BY OTHERS. CONTRACTOR MUST COORDINATE WITH UTILITY OWNER REGARDING WORK TO BE PERFORMED BY OTHERS.
   C. LADOT WILL INSTALL, REMOVE AND/OR COVER PARKING METER HEADS AS APPROPRIATE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR REMOVING THE PARKING METER POSTS AFFECTED BY CONSTRUCTION ONLY AFTER THE PARKING METER HEADS HAVE BEEN REMOVED BY LADOT. THE CONTRACTOR SHALL CONTACT LADOT (213) 485-2610, 10 WORKING DAYS PRIOR TO PARKING METER REMOVAL.
18. UNDERGROUND SERVICE ALERT:
   BEFORE COMMENCING ANY EXCAVATION, THE CONTRACTOR SHALL OBTAIN AN UNDERGROUND SERVICE ALERT (USA) INQUIRY I.D. NUMBER BY CALLING (800) 227-2600. TWO WORKING DAYS SHALL BE ALLOWED AFTER THE I.D. NUMBER IS OBTAINED AND BEFORE THE CONTRACTOR STARTS THE EXCAVATION WORK SO THAT UTILITY OWNERS CAN BE NOTIFIED. IF THE UTILITY OWNER IS THE CITY OF LOS ANGELES, A CONFIRMATION NUMBER INDICATING THE CITY HAS BEEN NOTIFIED SHALL BE OBTAINED BY USA AND/ OR THE CONTRACTOR FROM THE APPROPRIATE CITY DEPARTMENT. THE I.D. NUMBER TOGETHER WITH THE DATE ACQUIRED SHALL BE REPORTED TO THE BUREAU OF CONTRACT ADMINISTRATION WHEN CALLING FOR INSPECTION. I.D. NUMBERS WILL NOT BE GIVEN MORE THAN 10 DAYS BEFORE STARTING EXCAVATION WORK.
19. ALL POWER POLES AND POWER FACILITIES WILL BE REPLACED AND/OR ADJUSTED BY LADWP. CONTRACTOR SHALL NOT DISTURB NOR DAMAGE OVERHEAD FACILITIES.
20. TRAFFIC SIGNAL EQUIPMENT (POLES, CONDUITS, PULLBOXES, LOOPS) INTERFERING WITH CONSTRUCTION MAY BE RELOCATED ONLY WITH PRIOR APPROVAL BY LADOT. IN THE EVENT OF DAMAGE TO TRAFFIC SIGNAL EQUIPMENT, THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE LADOT INSPECTOR FERNANDO ALEGRIA AT (213) 792-7637 AND SHALL BE RESPONSIBLE FOR IMMEDIATE REPAIR/REPLACEMENT AT NO COST TO THE CITY. REPAIRED OR REPLACED TRAFFIC SIGNAL EQUIPMENT SHALL BE INSPECTED BY THE LADOT INSPECTOR BEFORE SIGNAL CIRCUITS ARE ENERGIZED.
21. LOCATION OF EXISTING TRAFFIC SIGNAL CONDUIT SHOWN ON THE PLANS IS APPROXIMATE ONLY. CONTRACTOR SHALL DETERMINE IN ADVANCE OF THE WORK THE LOCATION OF TRAFFIC SIGNAL CONDUIT OR OTHER TRAFFIC SIGNAL EQUIPMENT WHICH MAY INTERFERE WITH THE WORK OR WHICH MAY BE DAMAGED BY HIS OPERATIONS.
22. PRIOR TO WORKING WITHIN THE PUBLIC RIGHT-OF-WAY, NOTIFY LADOT 5 WORKING DAYS IN ADVANCE, (213) 485-2610, FOR APPROVAL TO CLOSE TRAFFIC LANES AND/OR SIDEWALKS. THE CONTRACTOR WILL BE REQUIRED TO MEET WITH LADOT TO DETERMINE THE NEED FOR WORKSITE TRAFFIC CONTROLS PER STANDARD PLANS S-488, AND/OR SITE-SPECIFIC WORKSITE TRAFFIC CONTROL PLANS AND DETOUR PLANS. HOURS AND DURATION OF TRAFFIC LANE CLOSURES SHALL COMPLY WITH TRAFFIC LANE REQUIREMENTS PREVIOUSLY ESTABLISHED AND PROVIDED BY LADOT.
23. THE CONTRACTOR SHALL PROTECT ALL EXISTING DRAINAGE STRUCTURES DURING CONSTRUCTION AND KEEP THEM FREE OF CONCRETE, TRASH AND OTHER CONSTRUCTION DEBRIS.
24. ALL STORMDRAIN FACILITIES IN CALTRANS R/W ARE OWNED AND MAINTAINED BY CALTRANS.
25. CONTRACTOR SHALL COMPLY WITH "SEWAGE SPILL PREVENTION RESPONSE PLAN" PER CITY OF LOS ANGELES BROWN BOOK, 7-8.4.
26. ALL EXISTING SANITARY SEWER & STORM DRAIN MAINTENANCE HOLES WITHIN THE WORK AREA THAT WILL REMAIN IN OPERATION AFTER CONSTRUCTION SHALL BE ADJUSTED TO GRADE.
27. UNLESS OTHERWISE NOTED, THE CONTRACTOR SHALL ADJUST WATER SERVICES AND WATER GATE VALVES TO GRADE AFTER NOTIFYING AND COORDINATING WITH DWP-WS.
28. LIMITS OF COLD PLANE AND OVERLAY TO BE DETERMINED BY THE CITY ENGINEER PRIOR TO CONSTRUCTION.
29. ALL CURB RAMPS SHALL HAVE TRUNCATED DOMES ON THE "W" PORTION. SEE STD PLAN S-442-3.
30. PRE-CONSTRUCTION MEETING IS REQUIRED PRIOR TO START OF CONSTRUCTION, PRE AND POST INSTALLATION CCTV INSPECTION OF THE LINE IS REQUIRED BETWEEN MH'S TO CONFIRM NUMBER OF EXISTING LATERALS AND TO VERIFY THAT NO DAMAGE WAS DONE TO THE PIPE.
31. CONTRACTOR SHALL BACKFILL TRENCHES WITH SLURRY TO BOTTOM OF PAVEMENT SECTION PER SSPWC 100-E-100 WITHIN CITY STREETS. JETTED BACKFILL ALLOWED PER CITY STANDARD PLAN 251-1 RFI 0101
32. CONTRACTOR SHALL COORDINATE ALL UTILITY RELOCATIONS WITH THE FINAL DESIGN OF TRACK, SYSTEMS, FACILITIES AND DUCT BANKS.

SURVEY CONTROL

BASIS OF BEARING

BASIS OF BEARING S 77° 38' 27" E :
COORDINATES, BEARINGS AND DISTANCES SHOWN ON THIS SURVEY ARE BASED ON THE ICM COORDINATES SHOWN ON NAVIGATE LA HOLDING THE COORDINATE (N=1836387.06 , E=6491165.61) AT THE INTERSECTION OF 6TH ST. AND MATEO ST. FOR POSITION AND HOLDING THE COORDINATE (N=1835473.68 , E=6495334.11) AT THE INTERSECTION OF BOYLE AVE. AND WHITTIER BLVD. FOR DIRECTION OR BEARING.

COMPLIANCE WITH THE GENERAL PERMIT FOR STORM WATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITIES

1. THE CONTRACTOR IS REQUIRED TO MEET THE FOLLOWING MINIMUM STANDARDS OF GOOD HOUSEKEEPING:
   a. ERODED SEDIMENTS AND OTHER POLLUTANTS MUST BE RETAINED ON SITE AND MAY NOT BE TRANSPORTED FROM THE SITE VIA SHEETFLOW, SWALES, AREA DRAINS, NATURAL DRAINAGE, OR WIND.
   b. STOCKPILES OF EARTH AND OTHER CONSTRUCTION-REALATED MATERIALS MUST BE PROTECTED FROM BEING TRANSPORTED FROM THE SITE BY WIND OR WATER.
   c. FUELS, OILS, SOLVENTS, AND OTHER TOXIC MATERIALS MUST BE STORED IN ACCORDANCE WITH THEIR LISTING AND ARE NOT TO CONTAMINATE THE SOIL NOR THE SURFACE WATERS. ALL APPROVED TOXIC STORAGE CONTAINERS ARE TO BE PROTECTED FROM THE WEATHER. SPILLS MUST BE CLEANED UP IMMEDIATELY AND DISPOSED OF IN A PROPER MANNER. SPILLS SHALL NOT BE WASHED INTO DRAINAGE SYSTEM.
   d. EXCESS OR WASTE CONCRETE SHALL NOT BE WASHED INTO THE PUBLIC WAY OR ANY DRAINAGE SYSTEM. PROVISIONS SHALL BE MADE TO RETAIN CONCRETE WASTES ON-SITE UNTIL THEY CAN BE APPROPRIATELY DISPOSED OF OR RECYCLED.
   e. TRASH AND CONSTRUCTION-RELATED SOLID WASTES MUST BE DEPOSITED INTO A COVERED RECEPTACLE TO PREVENT CONTAMINATION OF RAINWATER AND DISPERSAL BY WIND.
   f. SEDIMENTS AND OTHER MATERIALS MAY NOT BE TRACKED FROM THE SITE BY VEHICLE TRAFFIC. THE CONSTRUCTION ENTRANCE ROADWAYS MUST BE STABILIZED SO AS TO INHIBIT SEDIMENTS FROM BEING DEPOSITED INTO THE PUBLIC WAYS. ACCIDENTAL DEPOSITS MUST BE SWEPT UP IMMEDIATELY AND MAY NOT BE WASHED DOWN BY RAIN OR BY ANY OTHER MEANS.
2. WET WEATHER EROSION CONTROL PLAN (WWECP)
   PURSUANT TO SECTION 61.02 OF THE LAMC, WHENEVER IT APPEARS THAT THE CONSTRUCTION SITE WILL HAVE GRADING BETWEEN OCTOBER 1 AND APRIL 15, THE CONTRACTOR SHALL SUBMIT A WWECP TO THE PROJECT MANAGER FOR APPROVAL WITHIN 30 DAYS AFTER AWARD OF CONTRACT OR GET APPROVAL 30 DAYS PRIOR TO THE BEGINNING OF THE RAINY SEASON, WHICHEVER IS LONGER.
   GUIDANCE ON PREPARING THE WWECP CAN BE FOUND IN THE DEVELOPMENT BEST MANAGEMENT PRACTICES HANDBOOK - PART A, CONSTRUCTION ACTIVITIES ADOPTED BY THE BOARD OF PUBLIC WORKS, AS AUTHORIZED BY SECTION 64.72 OF IN LOS ANGELES MUNICIPAL CODE. THIS HANDBOOK CAN BE OBTAINED AT COST AT THE PUBLIC/PERMIT COUNTERS OF THE BUREAU OF ENGINEERING.
3. NOTICE OF INTENT
   THE CONTRACTOR SHALL FILE A "NOTICE OF INTENT" (NOI) WITH THE STATE WATER RESOURCES CONTROL BOARD TO COMPLY WITH THE CALIFORNIA GENERAL CONSTRUCTION ACTIVITY STORMWATER PERMIT AND PREPARE AND IMPLEMENT A STORMWATER POLLUTION PREVENTION PLAN (SWPPP). WHENEVER THE CONTRACTOR IS REQUIRED TO GET ANY TYPE OF PERMIT FROM THE DEPARTMENT OF BUILDING AND SAFETY (DBAS), THE CONTRACTOR SHALL SHOW A WASTE DISCHARGE IDENTIFICATION NUMBER (WDID) TO DBS AS PROOF OF SUBMITTAL OF THE NOI. IF THE CONTRACTOR DOES NOT NEED ANY TYPE OF PERMIT FROM THE DBAS, THE CONTRACTOR SHALL SHOW THE WDID TO THE PROJECT MANAGER. OWNER RECOGNIZES THAT THE PHYSICAL CHARACTERISTICS OF THE PROJECT SITE, THE PLANNED SITE IMPROVEMENTS, AND THE MEANS, METHODS, AND SEQUENCE OF WORK SELECTED BY THE CONTRACTOR MAY AFFECT THE QUALITY OF STORM WATER DISCHARGES FROM THE SITE, BOTH DURING AND AFTER CONSTRUCTION ACTIVITY. ACCORDINGLY, THE SWPPP FOR THE PROJECT SHALL REQUIRE IMPLEMENTATION OF POLLUTANT CONTROL PRACTICES AT THREE LEVELS : 1) SPECIFIC MANDATORY PRACTICES THAT MUST BE IMPLEMENTED AS SPECIFIED; 2) ALTERNATIVE MANDATORY PRACTICES WHERE THE CONTRACTOR SELECTS FROM LISTED PRACTICES THE ALTERNATIVE THAT BEST FITS THE MEANS, METHODS, AND SEQUENCE OF WORK; AND 3) PRACTICES WHERE THE CONTRACTOR SELECTS THE CONTROL PRACTICES THAT BEST FIT THE MEANS, METHODS, AND SEQUENCE OF WORK SO AS TO CONTROL POLLUTANTS IN A MANNER CONSISTENT WITH THE GENERAL PERMIT. CONTRACTOR, IN ASSUMING SOLE, COMPLETE, AND CONTINUOUS RESPONSIBILITY FOR THE CONDITIONS AT THE JOB SITE DURING CONSTRUCTION, SHALL FULLY COMPLY WITH ALL REQUIREMENTS, TERMS, AND CONDITIONS IN THE NOTICE TO INTENT AND GENERAL PERMIT AND SHALL IMPLEMENT THE SWPPP.
   OWNER RETAINS THE RIGHTS AND POWERS TO EFFECT PROMPT CORRECTIVE ACTION UPON FAILURE BY THE CONTRACTOR TO COMPLY WITH ANY REQUIREMENTS, TERMS, OR CONDITIONS IN THE NOI, GENERAL PERMIT, OR SWPPP; HOWEVER, OWNER'S RETAINING OF THESE RIGHTS DOES NOT OBLIGATE THE OWNER TO EFFECT SAID CORRECTIVE ACTION OR TO NOTIFY CONTRACTOR THAT CORRECTIVE ACTION IS REQUIRED, NOR DOES IT RELIEVE THE CONTRACTOR FROM THE FULL RESPONSIBILITY TO COMPLY. CONDITIONS OF NON-COMPLIANCE DUE TO ANY ACTION OR INACTION OF ANY SUBCONTRACTOR, MATERIAL SUPPLIER, PROVIDER OF SERVICE, OR WORKER ON THE ACCOUNT OF THE CONTRACTOR SHALL BE CONSIDERED A FAILURE BY THE CONTRACTOR TO COMPLY. CONTRACTOR SHALL DESIGNATE IN WRITING THE NAME AND TELEPHONE NUMBER OF THE PERSON RESPONSIBLE FOR IMPLEMENTING THE SWPPP. THE DESIGNATED PERSON SHALL BE AVAILABLE 24 HOURS PER DAY, SEVEN DAYS PER WEEK AND SHALL HAVE THE AUTHORITY TO RESPOND TO STORM WATER POLLUTION ISSUES AND TO IMPLEMENT CORRECTIVE AND PREVENTATIVE MEASURES AS REQUIRED. THE DESIGNATED PERSON AND THE TELEPHONE NUMBER SHALL BECOME PART OF THE SWPPP, A DOCUMENT AVAILABLE TO THE PUBLIC.

APPROVED FOR CONSTRUCTION

METRO TRANSIT DIVISION
BUREAU OF ENGINEERING
CITY OF LOS ANGELES

City of Los Angeles Bureau of Engineering's review of these submittals, plans, specifications, and shop drawings shall not relieve HNTB, its consultants, and its contractors of the responsibility for errors, or omissions in the submitted documents. HNTB is responsible to insure and confirm that the City of Los Angeles Standards (Standards) are used to perform all work on or effecting City facilities. The Standards shall be the current edition in use upon the date City receives such submittal or per an effective date as specified in the agreement (if any).

ADDENDUM 5

NOTICE TO CONTRACTORS

GENERAL NOTES

1. NOTIFY THE METROPOLITAN TRANSIT AUTHORITY, (213) 922-4632, 48 HOURS PRIOR TO ANY WORK WHICH WILL AFFECT NORMAL BUS OPERATIONS.

2. TO ENSURE SURVEY MONUMENT PRESERVATION, CONTRACTOR SHALL PROTECT AND/ OR PERPETUATE ANY CITY/ COUNTY SURVEY FACILITY AFFECTED BY THE PROJECT INCLUDING, BUT NOT LIMITED TO, BENCHMARKS, MONUMENTS, CORNER TIES, NAIL AND TINS, RIGHT OF WAY CORNERS, BOUNDARY MONUMENTS, BRASS DISKS, ETC. AS ACCEPTED BY THE CITY. PRIOR TO DISTURBANCE, THE CITY SHALL BE NOTIFIED AND A CORNER RECORD OR RECORD OF SURVEY MUST BE FILED WITH THE COUNTY SURVEYOR PRIOR TO CONSTRUCTION. IN ADDITION, CITY MONUMENT TIE NOTES SHALL BE FILED IN ORDER APPROPRIATELY TO ACHIEVE FULL COMPLIANCE WITH STATE LAW.

STREET IMPROVEMENTS - ADDITIONAL NOTES

1. GRADING REQUIRED ON PRIVATE PROPERTY OUTSIDE THE STREET AND ALLEY DEDICATION, IN CONNECTION WITH THIS IMPROVEMENT, SHALL BE PERFORMED EITHER WITHIN DEDICATED SLOPE EASEMENTS OR IN AREAS FOR WHICH SATISFACTORY RIGHTS-OF-ENTRY HAVE BEEN OBTAINED.

2. DRAINAGE FROM ALL LOTS SHALL BE CARRIED TO THE IMPROVED GUTTER BY MEANS OF A DRIVEWAY, APPROVED OUTLET STRUCTURE, OR SIDEWALK DRAIN (SECTION 306-7 GREENBOOK).

3. PAVING OF ROADWAY AREAS SHALL BE WITHHELD UNTIL THE SEWER AND STORM DRAIN WORK HAS BEEN APPROVED BY UNDERGROUND FINAL INSPECTION.

4. WHERE TWO STREETS OF UNEQUAL BASE AND PAVEMENT THICKNESS INTERSECT, THE ENTIRE INTERSECTION TO THE ECR SHALL BE PAVED WITH THE GREATER THICKNESS OF BASE AND PAVEMENT.

STORM DRAIN CONSTRUCTION NOTES:

1. WHERE THE STORM DRAIN IS TO BE PLACED WITHIN A FILL, THE CONTRACTOR SHALL FIRST COMPACT THE FILL A MINIMUM OF 12" ABOVE THE TOP OF PIPE BEFORE TRENCH EXCAVATION TO LAY PIPE.

2. TRENCH BACKFILL FOR ALL STORM DRAINS CONSTRUCTED IN DRAINAGE EASEMENTS SHALL BE MECHANICALLY COMPACTED TO A RELATIVE DENSITY OF 90%.

3. PROTECTION BARS SHALL BE INSTALLED ON ALL SIDE OPENING CATCH BASINS UNLESS INDICATED OTHERWISE ON PLAN.

4. LOCATIONS OF EXISTING HOUSE CONNECTION SEWERS SHOWN HEREON ARE APPROXIMATE. IF INTERFERENCE IS ENCOUNTERED, REMODEL THE HOUSE CONNECTION IN CONFORMANCE WITH THE APPLICABLE DETAIL ON STANDARD PLAN S-111-0.

5. THE CONTRACTOR SHALL VERIFY THE ELEVATION OF ANY SUBSTRUCTURE INDICATED WITH AN ASTERISK (*) AND SHALL SECURE CLEARANCE OF THE PRIVATE ENGINEER BEFORE PROCEEDING WITH INSTALLATION OF THE PIPE.

6. SPPWC PER BUREAU OF ENGINEERING SPECIAL ORDER NO. 007-0701, DATED JULY 16, 2001.

7. SPACE BETWEEN THE BACK OF SIDE OPENING CATCH BASINS AND EXISTING SIDEWALK, IF LESS THAN 2 FEET, SHALL BE FILLED WITH 4" CONCRETE SIDEWALK PLACED MONOLITHICALLY WITH THE TOP SLAB OF THE CATCH BASIN.

8. SPECIFICATIONS: ALL DRAINAGE WORK SHALL CONFORM TO THE LATEST EDITION AND SUPPLEMENTS OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION (SSPWC) THE GREEN BOOK AS MODIFIED BY THE CORRESPONDING ISSUE OF THE BROWN BOOK AND ANY SPECIAL PROVISIONS.

9. THE GRATES FURNISHED FOR ALL SURFACE DRAINAGE INLETS SHALL BE GRAY CAST IRON. GRATES SHALL BE CAPABLE OF SUPPORTING HS20-44 WHEEL LOADING FOR HEAVY-DUTY TRAFFIC AND H-10 LOADING FOR PEDESTRIAN TRAFFIC. GRATES SHALL CONFORM TO STANDARD PLANS S-601-0.

10. ALL PVC PIPE SHALL CONFORM TO ASTM D3034 SDR 35.

11. ALL PROPOSED & REMODELED CATCH BASINS SHALL INCLUDE CATCH BASIN INSERTS, CATCH BASIN OPENING SCREEN COVER, SEE SPECIFICATIONS.

12. ALL NEW AND REMOLDED OR REPLACED CATCH BASINS UNDER THIS PROJECT SHALL BE STENCILED WITH PROHIBITIVE LANGUAGE SUCH AS "NO DUMPING DRAINS TO OCEAN".

TREES AND TREE WELLS

1. TREE WELL COVERS, TYPE A, PER STANDARD PLAN S-450-3 SHALL BE PROVIDED FOR TREES PLANTED WITHIN THE SIDEWALK AREA. WHEN EXISTING CURB TO BACK OF WALK IS LESS THAN 8' USE TYPE A-2 TREE WELLS, AND IF 8' OR GREATER USE TYPE A-1 TREE WELLS.

2. PLANT _____ IN THE TREE WELLS WITH ROOT CONTROL BARRIER'S PER STANDARD PLAN S-456-2. STAKE THE TREES PER STANDARD PLAN S-663-1.

3. THE CONTRACTOR SHALL NOTIFY THE URBAN FORESTRY DIVISION FIVE WORKING DAYS PRIOR TO CONSTRUCTING THE SIDEWALK FOR THE MARKING OF THE TREE LOCATIONS. CALL (213) 847-0833.

4. TREE REMOVAL: PRIOR TO THE REMOVAL OF ANY STREET TREE, A BOARD REPORT MUST BE SUBMITTED AND APPROVED BY THE BOARD OF PUBLIC WORKS (30-60 DAYS FROM RECEIPT OF A WRITING FORMAL REQUEST,) A COPY OF THE PERMIT IS REQUIRED TO BE ON THE JOB SITE WHILE THE TREE WORK IS TAKING PLACE.

5. ROOT TRIMMING: TREE(S) MUST BE TRIMMED PRIOR TO ROOT PRUNING TO COMPENSATE FOR THE ROOT LOSS AND TO STABILIZE THE TREE. THE CROWN OF THE TREE IS TO BE REDUCED BY NO MORE THAN 25% OF FOLIAGE (UNLESS APPROVED OTHERWISE BY AN URBAN FORESTRY ARBORIST). PRUNE THE ROOTS ON ONE SIDE OF THE ROOT SYSTEM ONLY (UNLESS APPROVED OTHERWISE BY AN URBAN FORESTRY ARBORIST). DO NOT PRUNE ROOTS LARGER THAN 4" DIAMETER (PERMIT IS REQUIRED).
   - CONTRACTOR IS TO TRIM THE TREE(S) TO THE SATISFACTION OF THE URBAN FORESTRY DIVISION USING A.N.S.I. A300 STANDARDS AND/OR I.S.A. PRUNING GUIDELINES. (PERMIT IS REQUIRED).
   - NOTIFY THE URBAN FORESTRY DIVISION AT (213) 485-5675, FIVE WORKING DAYS PRIOR TO TRIMMING AND/OR ROOT PRUNING FOR A REPRESENTATIVE TO INSPECT AND ISSUE THE NECESSARY PERMITS.

ADDENDUM 5

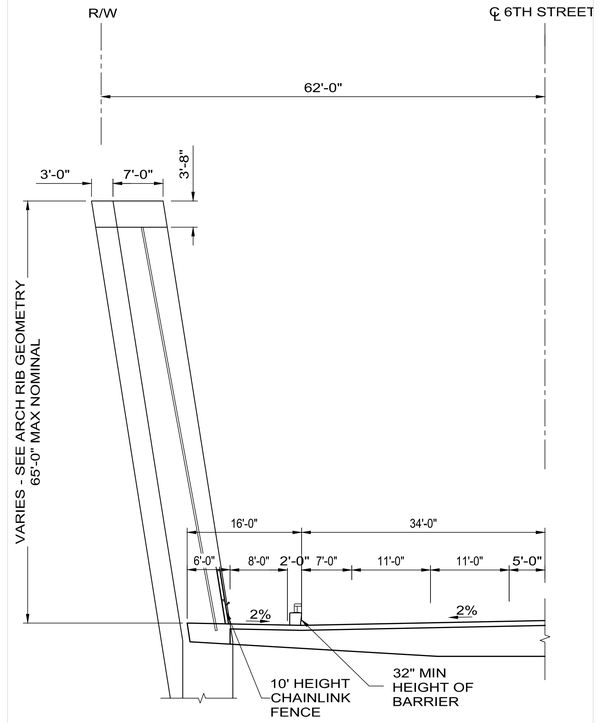
GENERAL EXCAVATION ZONES

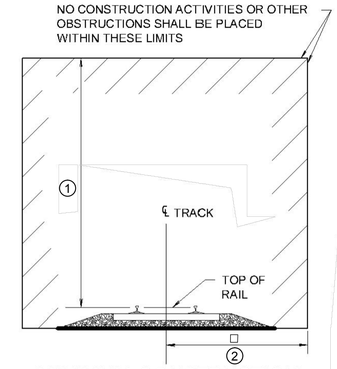
GENERAL SHORING NOTES:

1. ALL DIMENSIONS ARE MEASURED PERPENDICULAR TO ℄ TRACK.
2. PRIOR TO COMMENCING ANY WORK, SUBMIT TO THE RAILROAD FOR APPROVAL,, DETAILED PLANS INDICATING THE NATURE AND EXTENT OF THE TRACK PROTECTION SHORING PROPOSED. INSTALL THE TEMPORARY SHORING SYSTEM PER THE APPROVED PLANS. DESIGN THE TEMPORARY SHORING SYSTEM TO COMPLY WITH THE RAILROAD'S "GUIDELINES FOR TEMPORARY SHORING.
3. FOR EXCAVATIONS WHICH ENCROACH INTO ZONE A OR B, SUBMIT CALCULATIONS WITH SHORING PLANS. PLANS AND CALCULATIONS MUST BE SIGNED AND STAMPED BY A PROFESSIONAL ENGINEER REGISTERED IN THE STATE OF CALIFORNIA.



TYPICAL SECTION AT RAILROAD ARCH SPANS

SCALE: 1" = 10'



MINIMUM CONSTRUCTION CLEARANCE ENVELOPE

(NORMAL TO RAILROAD)

	1	2
MTA	21'-0"	15'-0"
AMTRAK	21'-0"	8'-6"
BNSF	21'-0"	15'-0"
METROLINK EAST	22'-6"	15'-0"
METROLINK WEST	22'-6"	15'-0"
UPRR	21'-6"	12'-0"

RAILROAD GENERAL NOTES:

1. RAILROAD REVIEW AND APPROVAL OF SHORING, ERECTION, DEMOLITION, AND FALSEWORK IS REQUIRED. ALLOW A MINIMUM OF FOUR WEEKS FOR THE REVIEW AND APPROVAL OF EACH SUBMITTAL.
2. THE PROPOSED GRADE SEPARATION PROJECT SHALL NOT INCREASE THE QUANTITY AND/OR CHARACTERISTICS OF THE FLOW IN THE RAILROAD'S DITCHES AND/OR DRAINAGE STRUCTURES.
3. THE ELEVATION OF THE EXISTING TOP-OF-RAIL PROFILE SHALL BE VERIFIED BEFORE BEGINNING CONSTRUCTION. ALL DISCREPANCIES SHALL BE BROUGHT TO THE ATTENTION OF THE RAILROAD PRIOR TO CONSTRUCTION.
4. THE CONTRACTOR MUST SUBMIT A PROPOSED METHOD OF EROSION AND SEDIMENT CONTROL AND HAVE THE METHOD APPROVED BY THE RAILROAD.
5. ALL SHORING SYSTEMS THAT IMPACT THE RAILROAD'S OPERATIONS AND/OR SUPPORTS THE RAILROAD'S EMBANKMENT SHALL BE DESIGNED AND CONSTRUCTED PER CURRENT RAILROAD GUIDELINES FOR TEMPORARY SHORING.
6. ALL DEMOLITIONS WITHIN THE RAILROAD'S RIGHT-OF-WAY AND/OR DEMOLITION THAT MAY IMPACT THE RAILROAD'S TRACKS OR OPERATIONS SHALL BE IN COMPLIANCE WITH THE RAILROAD'S DEMOLITION GUIDELINES.
7. ERECTION OVER THE RAILROAD'S RIGHT-OF-WAY SHALL BE DESIGNED TO CAUSE NO INTERRUPTION TO THE RAILROAD'S OPERATION, ENABLING THE TRACK(S) TO REMAIN OPEN TO TRAFFIC PER THE RAILROAD'S REQUIREMENTS.
8. ALL CONSTRUCTION PHASING THAT MAY IMPACT THE RAILROAD OPERATIONS SHALL BE DESIGNED TO CAUSE NO INTERRUPTION TO THE RAILROAD'S OPERATION, ENABLING THE TRACK(S) TO REMAIN OPEN TO TRAFFIC PER THE RAILROAD'S REQUIREMENTS.
9. FALSE-WORK CLEARANCES SHALL COMPLY WITH MINIMUM CONSTRUCTION CLEARANCES.
10. ALL PERMANENT CLEARANCES SHALL BE VERIFIED BEFORE PROJECT CLOSING.
11. FOR RAILROAD COORDINATION REFER TO THE RAILROAD COORDINATION REQUIREMENTS AS PART OF SPECIAL PROVISIONS.
12. SUBSEQUENT STAGES, UP TO AND INCLUDING THE FINAL SIGNED AND STAMPED PLANS, OF THIS PROJECT ARE SUBJECT TO THE REVIEW AND APPROVAL OF UPRR. REFER TO UPRR / BNSF GUIDE LINES.

1. RAILROAD REVIEW AND APPROVAL OF SHORING, DEMOLITION AND FALSE WORK PLANS ARE REQUIRED PRIOR TO THEIR COMMENCEMENT.

1. DETAILED DEMOLITION PLANS SHALL BE SUBMITTED TO UPRR FOR REVIEW AND APPROVAL.
   A. DEMOLITION PLANS SHALL BE PLANNED TO AVOID INTERRUPTING RAILROAD OPERATIONS
   B. DEBRIS WILL NOT BE PERMITTED TO FALL DIRECTLY ONTO RAILROAD RIGHT-OF-WAY. TEMPORARY TRACK SHIELDS SHALL BE PROVIDED FOR SECONDARY PROTECTION ONLY. DEBRIS SHALL BE CONTAINED WITHIN PRIMARY PROTECTION SYSTEM AND/OR BRIDGE COMPONENTS SHALL BE CUT INTO SECTIONS AND REMOVED.
   C. FURTHER COORDINATION WITH THE LOCAL SERVICE UNIT WILL BE NECESSARY FOR CONSTRUCTION ACCESS, AC PAVEMENT INSTALLATION, TEMPORARY CROSSINGS OVER YARD TRACK, TRACK PROTECTION, ETC.

FOR WORK WITHIN AMTRAK ROW

2

1. ALL UNDERGROUND UTILITIES, CABLE, AND FACILITIES MUST BE LOCATED AND PROTECTED BEFORE ANY EXCAVATING, DRILLING, BORING,DIRECTIONAL DRILLING, GROUND PENETRATING ACTIVITIES, OR CONSTRUCTION TASKS PLACE. THIS INCLUDE RAILROAD AND COMMERCIAL UTILITIES, CABLES, DUCT LINES, AND FACILITIES. THESE ACTIVITIES WILL NOT BE PERFORMED IN CLOSE PROXIMITY TO THE AMTRAK DUCT LINES UNLESS MONITORED BY ON-SITE AMTRAK COMMUNICATIONS AND SIGNAL (C&S) DEPARTMENT PERSONNEL. HAND DIGGING MAY BE REQUIRED, AS DIRECTED BY AMTRAK THROUGH THE ON-SITE AMTRAK C&S SUPPORT PERSONNEL. AMTRAK MAINTAINS THE RIGHT TO ACCESS ALL EXISTING CABLES AND CONDUITS THROUGHOUT CONSTRUCTION. AMTRAK ALSO RESERVES THE RIGHT TO UPGRADE AND INSTALL NEW CABLES AND CONDUITS IN THE AFFECTED AREA. THE "ONE CALL" PROCESS MUST BE FOLLOWED. PLEASE NOTE THAT AMTRAK IS NOT A PART OF THE ONE-CALL PROCESS.CONTACT AMTRAK ENGINEERING TO HAVE ALL AMTRAK UNDERGROUND UTILITIES AND ASSETS LOCATED. PRECAUTIONS MUST BE TAKEN TO PREVENT ANY INTERRUPTION TO AMTRAK'S OPERATION.
2. CONTRACTOR SHALL PERFORM ALL WORK ON AMTRAK RIGHT OF WAY AND ADJACENT TO AMTRAK TRACKS IN ACCORDANCE WITH THE PROCEDURES PROVIDED IN THE ATTACHED AMTRAK ENGINEERING PRACTICE NUMBER EP 01, MAINTENANCE AND PROTECTION OF RAILROAD TRAFFIC DURING CONTRACTOR OPERATIONS.
3. EXCAVATION AND SHORING ADJACENT TO AMTRAK RAILROAD TRACKS SHALL BE DESIGNED AND CONSTRUCTED IN ACCORDANCE WITH THE ATTACHED AMTRAK I & C SPECIFICATIONS SECTION 02261A, REQUIREMENTS FOR TEMPORARY SHEETING AND SHORING TO SUPPORT AMTRAK TRACKS.
4. HOISTING OPERATIONS OVER AMTRAK TRACKS SHALL BE DESIGNED IN ACCORDANCE WITH THE ATTACHED AMTRAK'S I&C SPECIFICATIONS SECTION 01152A - SUBMISSION DOCUMENTATION REQUIRED FOR AMTRAK REVIEW AND APPROVAL OF PLANS FOR BRIDGE ERECTION, DEMOLITION AND OTHER CRANE/HOISTING OPERATIONS OVER RAILROAD RIGHT-OF-WAY.
5. TEMPORARY SHIELDS FOR CONSTRUCTION ABOVE AMTRAK TRACKS SHALL BE DESIGNED IN ACCORDANCE WITH THE ATTACHED AMTRAK'S I&C SPECIFICATIONS SECTION 01520 - REQUIREMENTS FOR TEMPORARY PROTECTION SHIELDS FOR DEMOLITION AND CONSTRUCTION OF OVERHEAD BRIDGES AND OTHER STRUCTURES.

FOR WORK WITHIN SCRRA ROW

1. CONTRACTOR SHALL NOTIFY SCRRA'S CONTRACTOR AT (714) 920-9107 A MINIMUM OF 15 DAYS PRIOR TO BEGINNING WORK ON THE RIGHT OF WAY TO ARRANGE FOR FLAGGING SERVICES. PRIOR TO NOTIFICATION FOR SAFETY PROTECTION DOES NOT GUARANTEE THE AVAILABILITY OF PROTECTIVE SERVICES FOR THE PROPOSED DATE OF WORK.
2. TEMPORARY RIGHT OF ENTRY AGREEMENT, SCRRA FORM 6, IS A REQUIREMENT OF WORKING ON OR ADJACENT TO THE SCRRA RIGHT OF WAY. THE CONTRACTOR SHALL CONTACT SCRRA PERMIT AND ROW ENCROACHMENTS COORDINATOR
   SOUTHERN CALIFORNIA REGIONAL RAIL AUTHORITY (METROLINK)
   255 SUPPLY STREET, POMONA, CALIFORNIA 91767
   (909) 392-3136
3. SCRRA IS NOT A MEMBER OF DIGALERT, CONTRACTOR SHALL CALL SCRRA'S SIGNAL DEPARTMENT AT (909) 592-1236 A MINIMUM OF 5 WORKING DAYS PRIOR TO BEGINNING CONSTRUCTION TO MARK SIGNAL AND COMMUNICATION CABLES AND CONDUITS. TO ASSURE CABLES AND CONDUITS HAVE BEEN MARKED, NO WORK MAY PROCEED UNTIL YOU HAVE BEEN PROVIDED WITH AN SCRRA DIG NUMBER. IN CASE OF SIGNAL EMERGENCIES OR GRADE CROSSING PROBLEMS, THE CONTRACTOR SHALL CALL SCRRA'S 24-HOUR SIGNAL EMERGENCY NUMBER 1-800-336-9721
4. THE CONTRACTOR AND HIS SUBCONTRACTORS CITY AND THEIR CONSULTANTS AND INSPECTORS AND OTHER INTERESTED PARTIES HAVING A NEED TO ENTER THE RIGHT OF WAY SHALL BE REQUIRED TO ATTEND A SCRRA SAFETY ORIENTATION CLASS PRIOR TO RECEIVING PERMISSION TO ENTER THE RIGHT OF WAY. CONTRACTOR SHALL NOTIFY SCRRA'S CONTRACTOR AT 1-877-452-0205 TO ARRANGE FOR THIRD PARTY SAFETY TRAINING.
5. MAXIMUM ALLOWABLE TRAIN SPEEDS ARE WEST BAN 79 MPH PASSENGER & 40 MPH FREIGHT AND EAST BAN 70 MPH PASSENGER & 40 MPH FREIGHT.
6. NO EQUIPMENT, TRUCKS OR MATERIAL ARE ALLOWED TO BE STORED ON THE RAILROAD RIGHT-OF-WAY.
7. THE APPLICANT AND/OR THE CONTRACTOR SHALL FOLLOW SCRRA RULES AND REGULATIONS ADDRESSED IN "RULES AND REQUIREMENTS FOR CONSTRUCTION ON RAILWAY PROPERTY" SCRRA FORM 57.
8. THE CONTRACTOR WILL BE REQUIRED TO MONITOR THE EXCAVATION AND SHORING OPERATIONS TO ENSURE THAT THE TRACKS ARE NOT MOVING IN ACCORDANCE WITH SECTION 9 OF THE SCRRA EXCAVATION SUPPORT GUIDELINES.

Sheet Version 3.0

Basic Excavation Requirements

Any proposed excavation that may occur in SCRRA Right-of-Way or that may affect operations on SCRRA tracks must adhere to the design, submittal and review requirements presented in these Guidelines and shall not proceed without acceptance by SCRRA.

RAILROAD ZONE OF INFLUENCE

The Railroad Zone of Influence is defined on Figure 2-1. The area below the Influence Line is divided into four zones. Requirements and limitations for excavation and temporary excavation support systems within each zone are described in detail below. Excavation requirements apply on or off of SCRRA Right-of-Way. Excavation beyond the Railroad Zone of Influence shall satisfy OSHA and other applicable requirements.

ZONE 1:

- **Excavation is prohibited.**
- Alternates to shored excavations shall be utilized. Potential alternates include temporary relocation of the tracks away from the area of excavation or completion of excavation and backfilling work during an Exclusive Track Window that has been planned and approved in advance by SCRRA. Requirements for requesting an Exclusive Track Window are provided in Section 10.2. Minimum requirements for excavation and backfill work within Zone 1 are provided in Section 2.2. Prior to beginning any shoring SCRRA will typically require that the track be removed and hot mix asphalt concrete (HMAC) sub-ballast layer be placed, 8 inches thick, 12 feet wide (centered on the track centerline) and extending 20 feet in each direction past the length of the shored excavation. SCRRA shoofly requirements are provided in the SCRRA Design Criteria Manual.

ZONE 2:

- **No excavation or temporary shoring installation will be allowed without the special written permission of SCRRA.** Requirements for requesting a variance are provided in Section 10.3. Additional requirements for excavation and shoring within Zone 2 are provided in Section 2.2.
- Alternates to shored excavations shall be utilized when practical.
- If SCRRA grants a variance to allow excavation, vertical excavation with continuous shoring walls is required. Shoring installation shall be complete prior to any excavation. Design of the shoring system shall include lateral surcharge due to railroad live load.
- Prior to beginning any shoring SCRRA will typically require that the track be removed and hot mix asphalt concrete (HMAC) sub-ballast layer be placed, 8 inches thick, 12 feet wide (centered on the track centerline) and extending 20 feet in each direction past the length of the shored excavation.
- Examples of continuous shoring wall types include interlocked sheet piling or diaphragm walls. Diaphragm wall types include deep soil mix walls, secant pile walls, tangent pile walls, and slurry walls. Soldier piles and lagging are not allowed if excavation is necessary to install lagging.

ZONE 3:

- **Excavation requires temporary shoring.** Excavations shall be vertical. Continuous shoring walls installed prior to any excavation are preferred. Maximum excavation lifts shall be limited to five (5) feet for each stage of excavation for soldier pile and lagging walls or any other type of shoring that requires excavation of an open soil face prior to installing continuous support elements.
- If the shored excavation is 15 feet or less from the centerline of the track, prior to beginning any shoring SCRRA may require that the track be removed and hot mix asphalt concrete (HMAC) sub-ballast layer be placed, 8 inches thick, 12 feet wide (centered on the track centerline) and extending 20 feet in each direction past the length of the shored excavation.
- **Design of the shoring system shall include lateral surcharge due to railroad live load.**

ZONE 4:

- Excavation requires temporary shoring.
- Lateral surcharge due to railroad live load need not be considered in the shoring design.
- The excavation shall be provided with a shoring system that actively supports the sides of the excavation and prevents the excavation faces from unraveling or moving. Sloped excavations are not permitted.
- Hydraulic and mechanical trench shores with sheeting, trench shields, and timber shoring may be utilized. However, installation of the shoring system must be completed before movement of trains is allowed on the adjacent track. Work Windows within which the shoring system installation must be completed shall be coordinated with SCRRA.

EXCAVATIONS BEYOND INFLUENCE LINE:

- Lateral surcharge due to railroad live load need not be considered in the shoring design.
- Shored vertical excavations are preferred. Sloped excavations are discouraged. SCRRA may require slope stability analysis for sloped excavations.
- Excavation and temporary shoring shall comply with Cal/OSHA and other applicable requirements.

Excavations shall also comply with the following:

- Finished excavation surfaces shall be in uniform planes, with no abrupt breaks.
- Positive drainage shall be maintained away from the tracks and track subgrade at all times.
- Backfilling materials, procedures, placement and performance criteria shall meet the requirements of SCRRA Standard Specifications for Earthwork Section 02300 and other applicable specification including hot mix asphalt concrete sub-ballast and aggregate base sub-ballast.

Jacking and receiving pits for installation of culverts or utility casings shall be a minimum of 25 feet from centerline of the nearest active track. Construction activities on SCRRA Right-of-Way and excavations for jacking and/or boring operations shall comply with all other provisions of these Guidelines as applicable.

SHEET OF SHEETS

ADDENDUM 5

City of Los Angeles Bureau of Engineering's review of these submittals, plans, specifications, and shop drawings shall not relieve HNTB, its consultants, and its contractors of the responsibility for errors, or omissions in the submitted documents. HNTB is responsible to insure and confirm that the City of Los Angeles Standards (Standards) are used to perform all work on or effecting City facilities. The Standards shall be the current edition in use upon the date City receives such submittal or per an effective date as specified in the agreement (if any).

GENERAL NOTES

1. ALL PROPOSED & REMODELED CATCH BASINS SHALL INCLUDE CATCH BASIN INSERTS, CATCH BASIN OPENING SCREEN COVER, SEE SPECIFICATIONS.
2. ALL NEW AND REMOLDED OR REPLACED CATCH BASINS UNDER THIS PROJECT SHALL BE STENCILED WITH PROHIBITIVE LANGUAGE SUCH AS "NO DUMPING DRAINS TO OCEAN".
3. CONTRACTOR SHALL REFER TO THE CURRENT CITY OF LOS ANGELES, BUREAU OF ENGINEERING STANDARD PLANS AND 2009 APWA STANDARD PLANS FOR PUBLIC WORK CONSTRUCTION (SPPWC).
4. CONTRACTOR SHALL POTHOLE AND VERIFY DEPTH AND SIZE OF EXISTING UTILITIES PRIOR TO CONSTRUCTION.
5. VERIFY IN FIELD AND AS-BUILT EXISTING SD SYSTEM. SUBMIT PLANS FOR APPROVAL.
6. STREET LIGHTING REMOVAL OR RELOCATION SEE STREET LIGHTING PLANS.
7. FOR DISPOSITION OF EXISTING UTILITIES SEE UTILITY PLANS. EXISTING UTILITIES TO BE PROTECTED IN PLACE UNLESS OTHERWISE NOTED.
8. ABANDONMENT OF EXISTING STORM DRAINS SHALL CONFORM TO "GREEN BOOK" SECTION 306-5 AS MODIFIED BY "BROWN BOOK". FILL ABANDONED PIPES WITH CLSM.
9. FRAME AND GRATING FOR CATCH BASIN ADA COMPLIANCE SEE SPECIFICATIONS FOR BRIDGE DECK DRAIN.
10. FOR ADDITIONAL STORM DRAIN CONSTRUCTION NOTES SEE G-403
11. FOR NOTICE TO CONTRACTOR SEE G-402
12. FOR LIST OF ABBREVIATIONS AND LEGENS SEE G-405 THROUGH G-408
13. FOR LIST OF CONSTRUCTION NOTES SEE G-409

RFI No.: 26 The City takes no exception to the Contractor abandoning the storm drain pipe(s) in place conforming to Green Book Section 306-5 as modified by the Brown Book. Where existing pipe that has been noted for removal conflicts with elements of the proposed viaduct, it is recommended that the Contractor partially remove the portion of pipe in conflict.

The Contractor shall as-built the lines/locations where the storm drain pipes have been abandoned in place vs. removed. The Contractor shall remove abandoned portions of pipe at no cost to the City if found to be in conflict with future contract, temporary, or change order work.

City of Los Angeles Bureau of Engineering's review of these submittals, plans, specifications, and shop drawings shall not relieve HNTB, its consultants, and its contractors of the responsibility for errors, or omissions in the submitted documents. HNTB is responsible to insure and confirm that the City of Los Angeles Standards (Standards) are used to perform all work on or effecting City facilities. The Standards shall be the current edition in use upon the date City receives such submittal or per an effective date as specified in the agreement (if any).

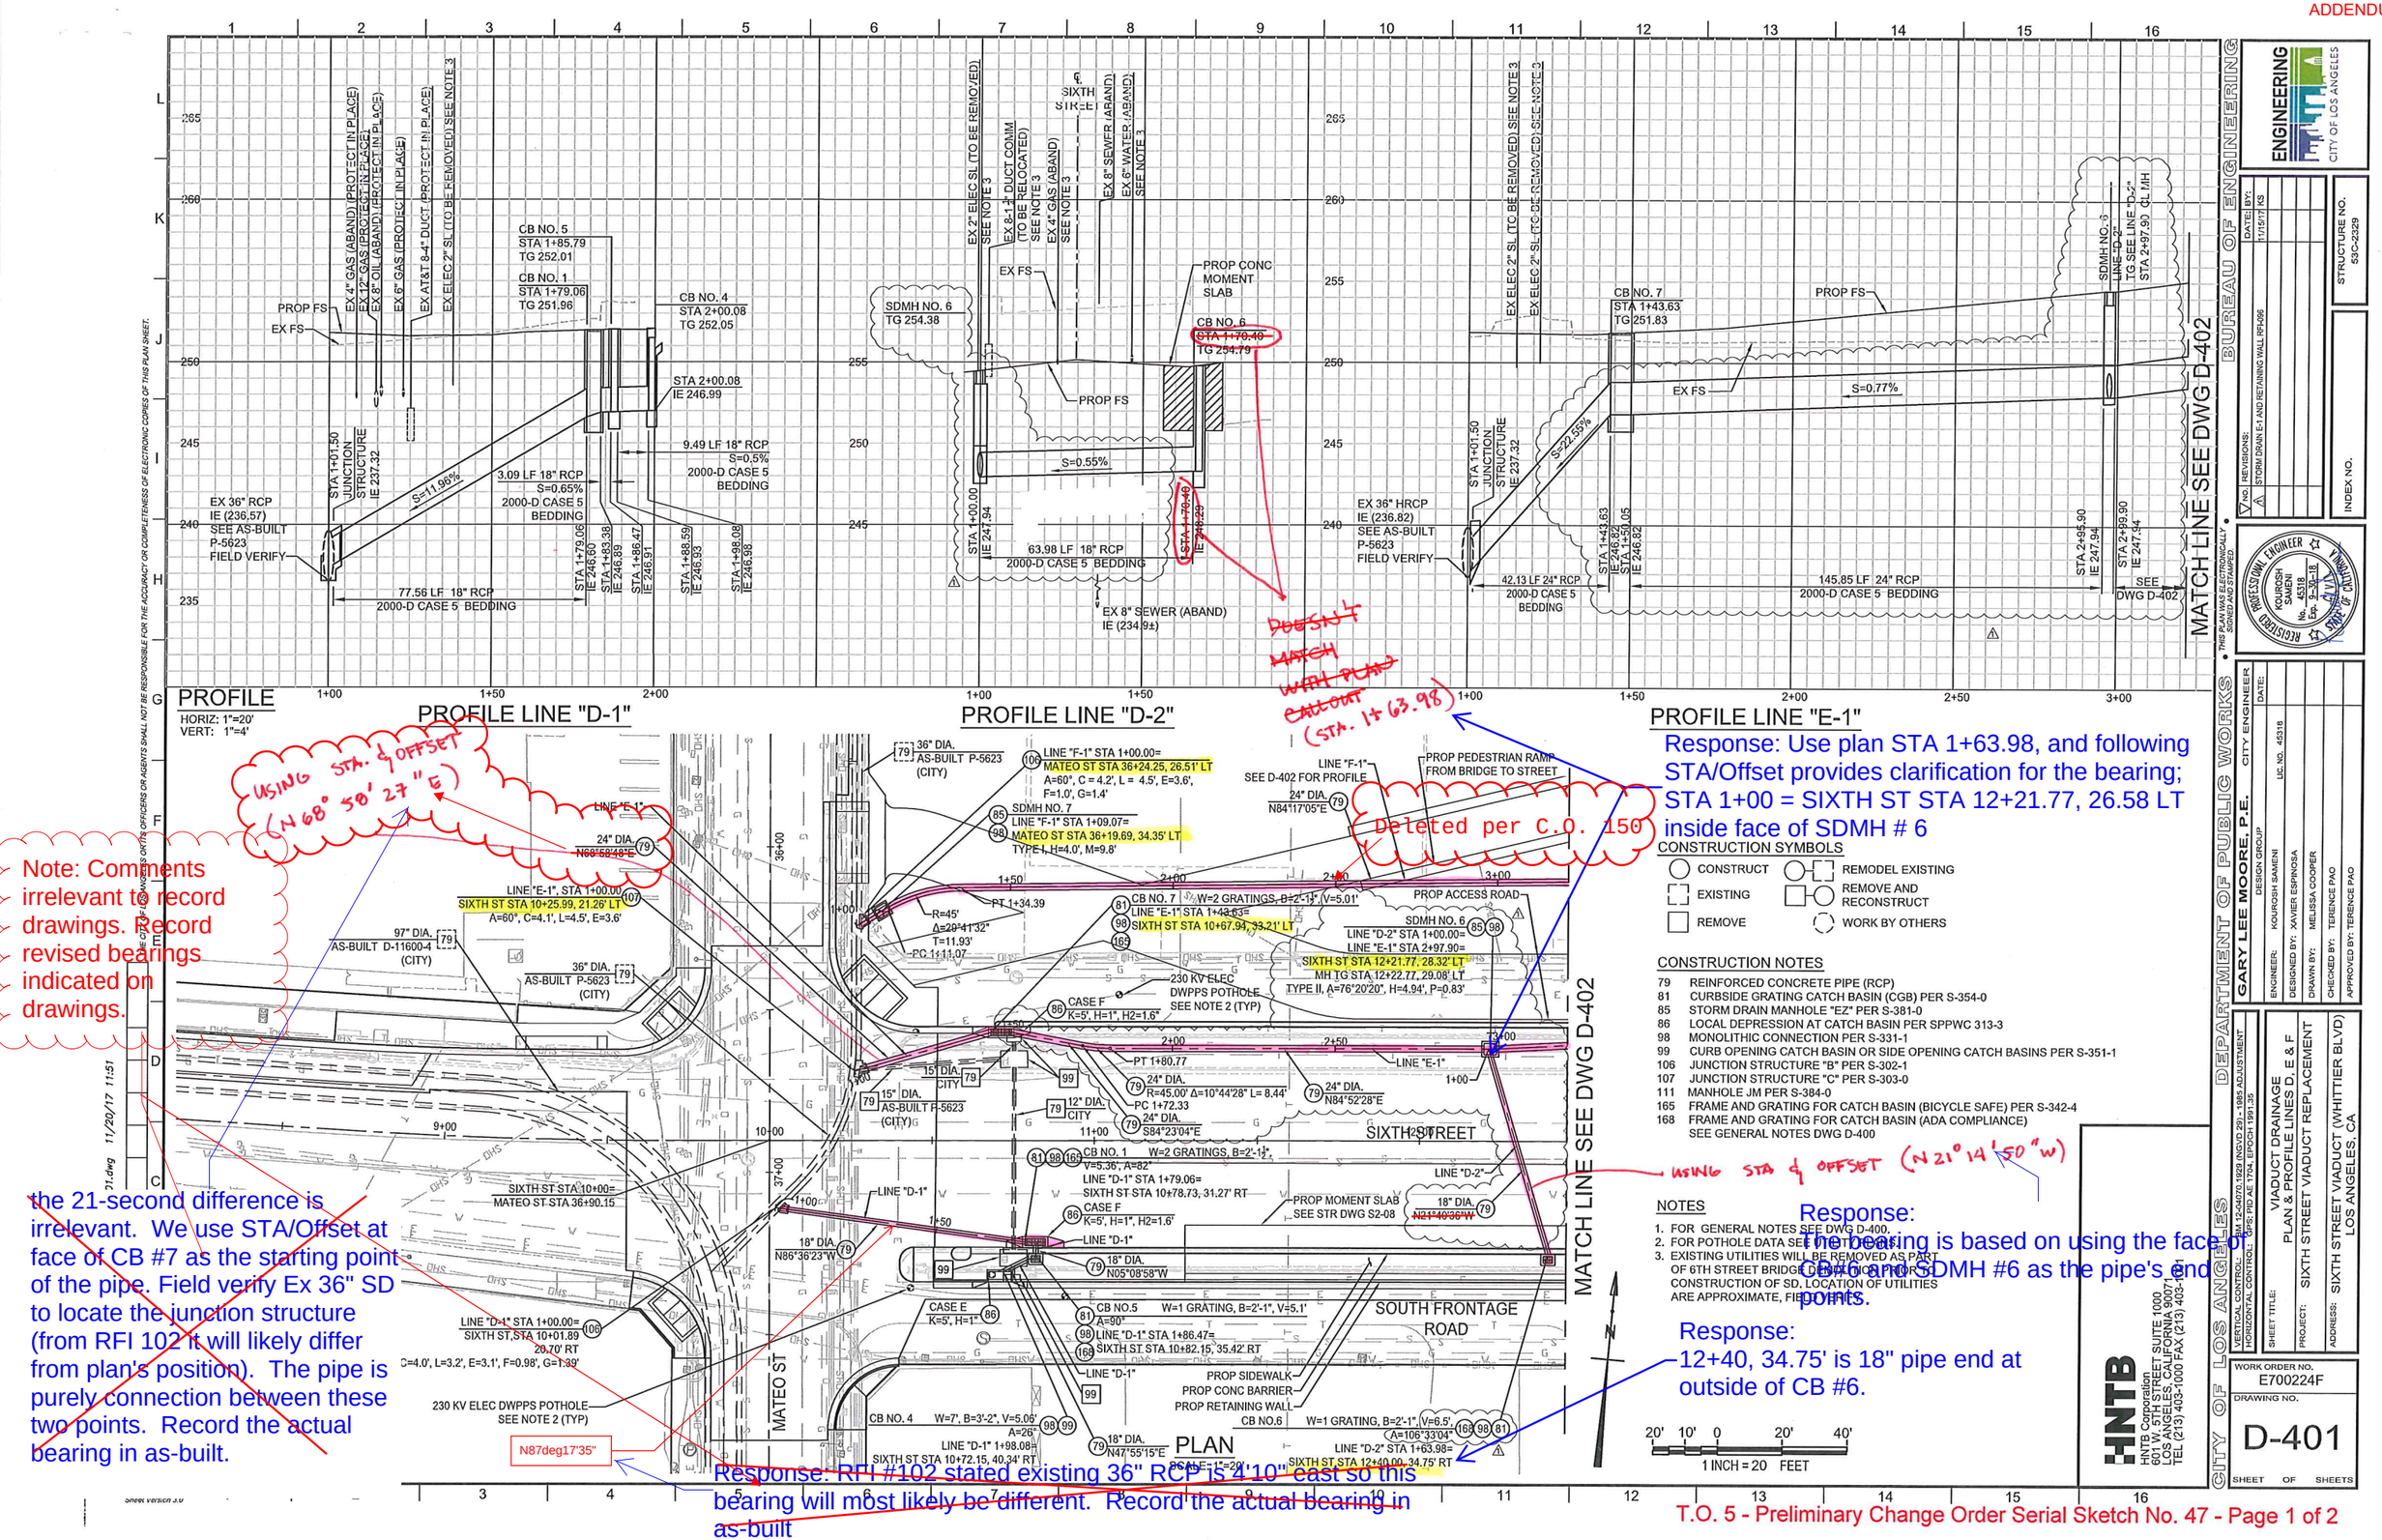
Sheet Version 3.0

THE CITY OF LOS ANGELES OR ITS OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF ELECTRONIC COPIES OF THIS PLAN SHEET.

ADDENDUM 5



Note: Comments irrelevant to record drawings. Record revised bearings indicated on drawings.

the 21-second difference is irrelevant. We use STA/Offset at face of CB #7 as the starting point of the pipe. Field verify Ex 36" SD to locate the junction structure (from RFI 102 it will likely differ from plan's position). The pipe is purely connection between these two points. Record the actual bearing in as-built.

Response: RFI #102 stated existing 36" RCP is 4'10" east so this bearing will most likely be different. Record the actual bearing in as-built

Response: Use plan STA 1+63.98, and following STA/Offset provides clarification for the bearing; STA 1+00 = SIXTH ST STA 12+21.77, 26.58 LT inside face of SDMH # 6

Response: The bearing is based on using the face of CB #6 and SDMH #6 as the pipe's end points.

Response: 12+40, 34.75' is 18" pipe end at outside of CB #6.

Deleted per C.O. 150

USING STA. & OFFSET (N 68° 58' 27" E)

USING STA & OFFSET (N 21° 14' 50" W)

DOESN'T MATCH WITH PLAN CALLOUT (STA. 1+63.98)

N87deg17'35"

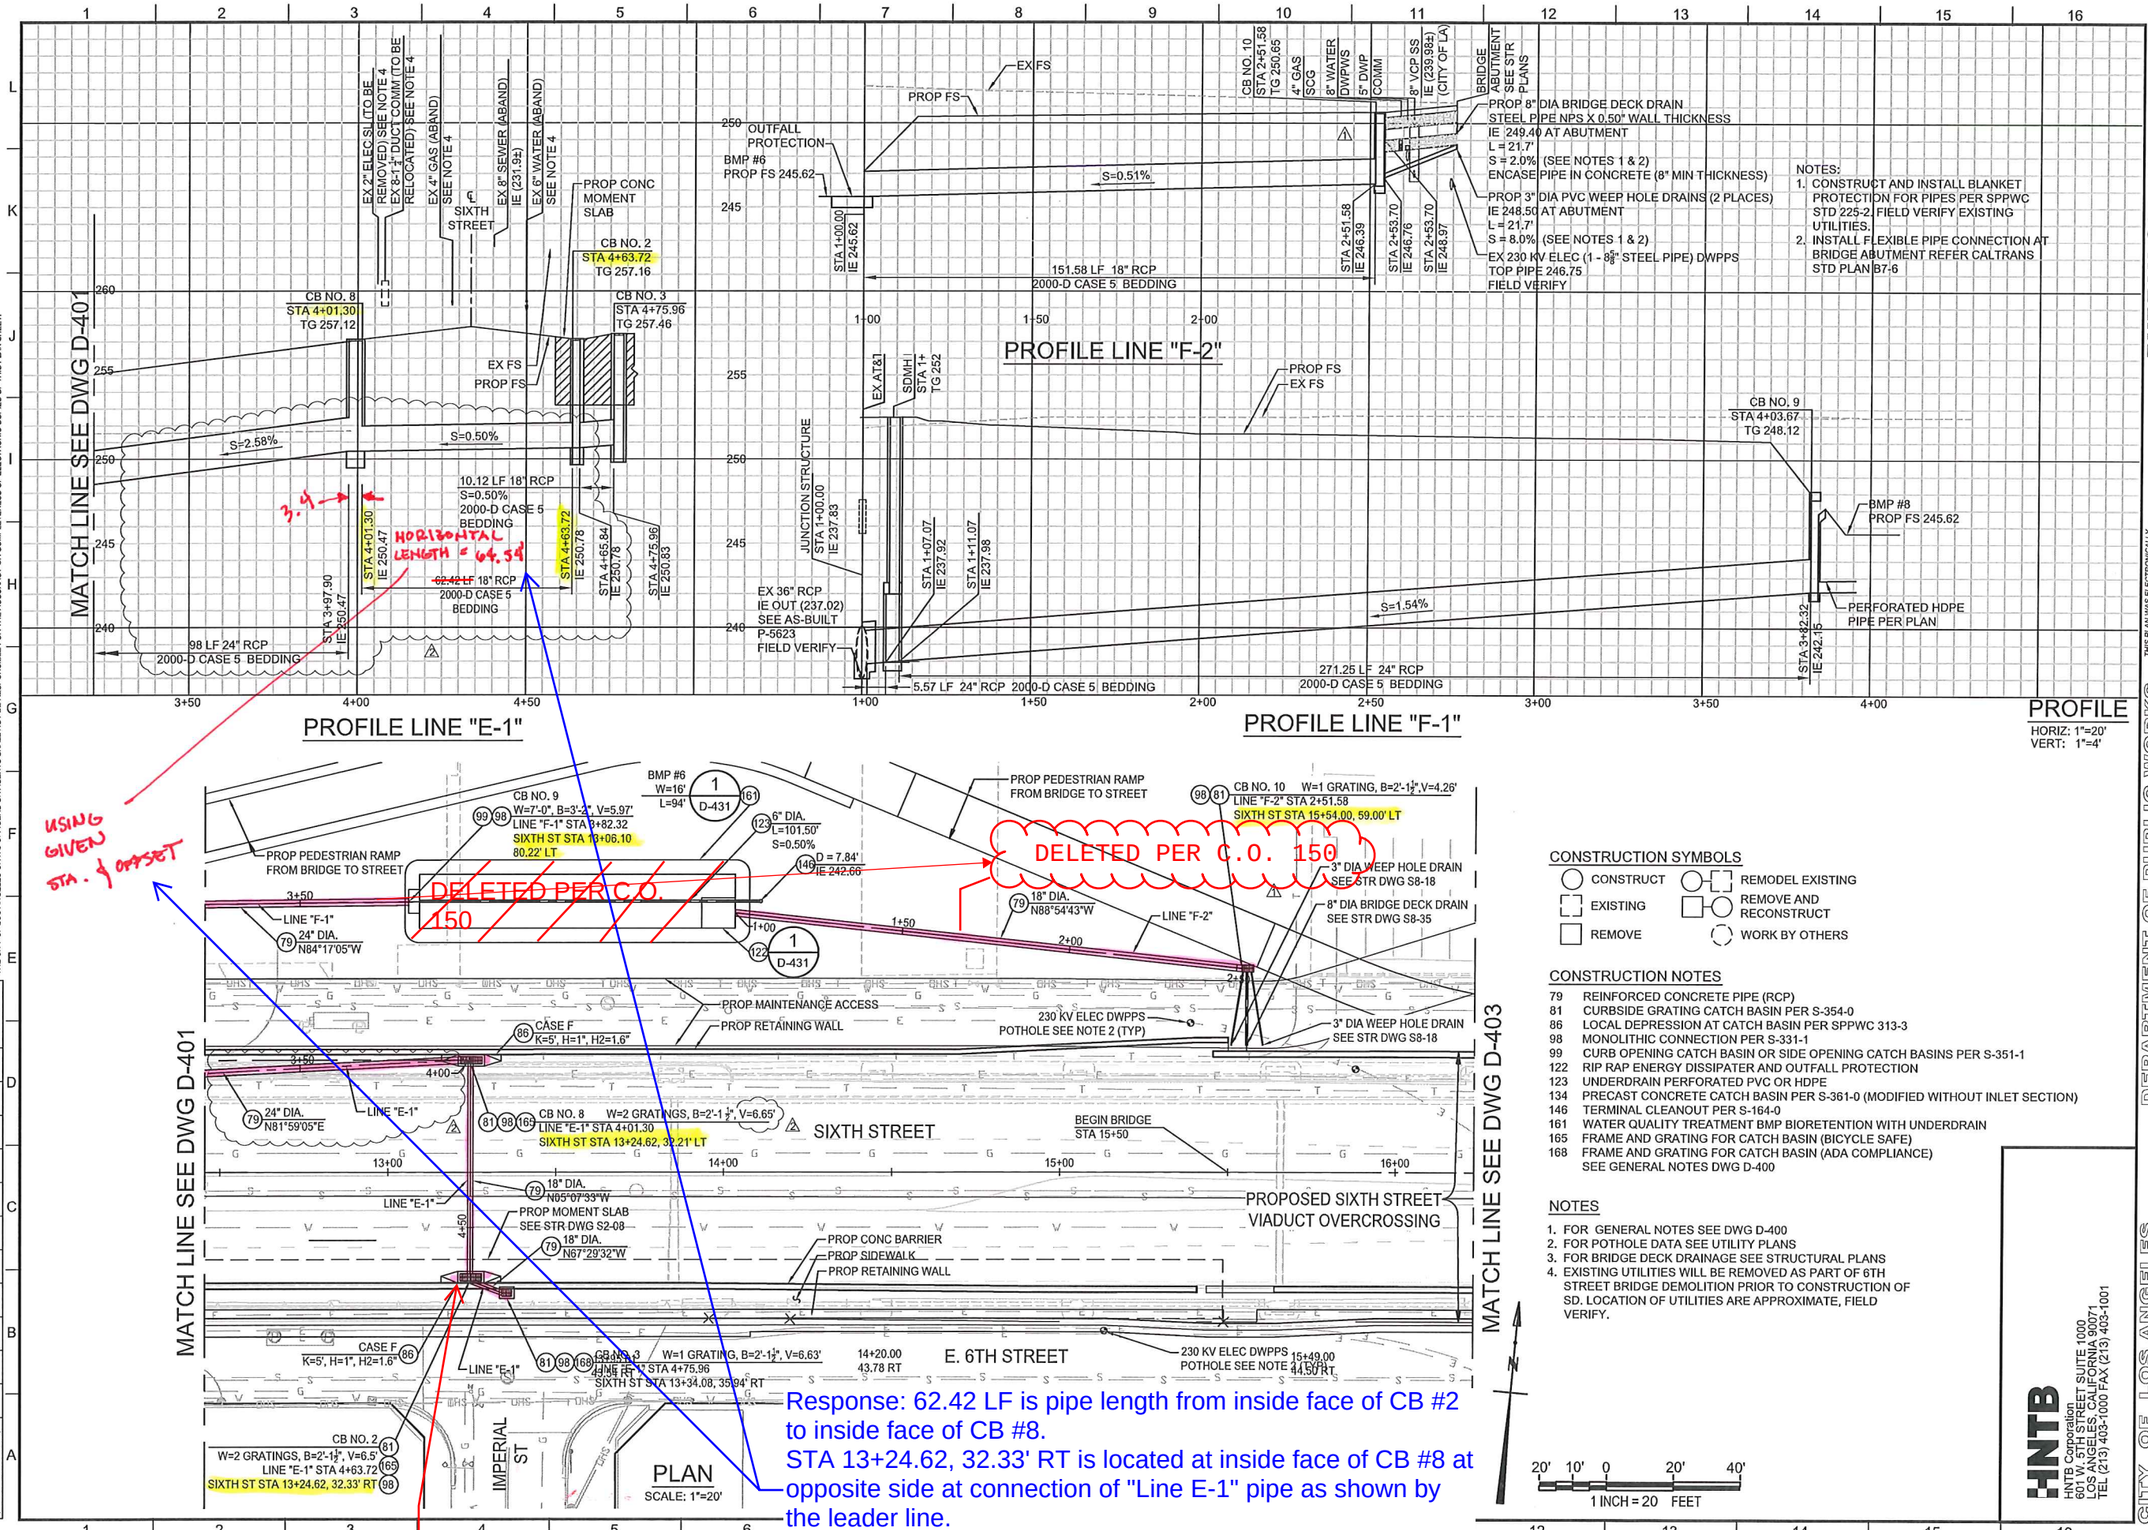
ADDENDUM 5



Response: 62.42 LF is pipe length from inside face of CB #2 to inside face of CB #8.
STA 13+24.62, 32.33' RT is located at inside face of CB #8 at opposite side at connection of "Line E-1" pipe as shown by the leader line.
STA 13+24.62, 32.21' LT is at inside face of CB #8 as shown by the leader line.

CONSTRUCTION NOTES

79 REINFORCED CONCRETE PIPE
81 CURBSIDE GRATING CATCH BASIN (CGB) PER S-354-0
85 STORM DRAIN MANHOLE "EZ" PER STD PLAN S-381-0
86 LOCAL DEPRESSION AT CATCH BASIN PER SPPWC 313-3
98 MONOLITHIC CONNECTION PER S-331-1
99 CURB OPENING CATCH BASIN OR SIDE OPENING CATCH BASIN PER S-351-1
122 RIP RAP ENERGY DISSIPATER AND OUTFALL PROTECTION
123 UNDERDRAIN PERFORATED PVC OR HDPE
126 PIPE ANCHORS AND BACKFILL STABILIZERS PER STD PLAN S-252-1
133 CAST-IN-PLACE PIPE
134 PRECAST CONCRETE CATCH BASIN PER S-361-0 (MODIFIED WITHOUT INLET SECTION)
146 TERMINAL CLEANOUT PER S-164-0
152 BLANKET PIPE PROTECTION FOR PIPE PER S-255-1
165 FRAME AND GRATING FOR CATCH BASIN (BICYCLE SAFE) PER S-342-4

5. Per CO 150 Storm drain system below grade removed from contract. Bridge deck drain piping installed to outlet in bent below grade.

NOTES:

1. FOR GENERAL NOTES SEE DWG D-400
2. FOR BRIDGE DECK DRAINAGE SEE STRUCTURAL PLANS.
3. LOCATION OF EXISTING UTILITIES ARE APPROXIMATE, FIELD VERIFY PRIOR TO CONSTRUCTION OF SD.
4. PROVIDE MINIMUM 2% SLOPE DECK DRAIN OUTLET TO CATCH BASIN.

GENERAL NOTES:

1. FOR ENLARGED PLAN OF WEST BANK SEE DRAWING D-412.
2. FOR ENLARGED PLAN OF EAST BANK SEE DRAWING D-413.

USACE GENERAL NOTES:

1. PROTECT UTILITY WITHIN THE USACE RIGHT-OF-WAY.
2. PROVISIONS SHALL BE MADE TO PREVENT DEBRIS FROM FALLING INTO THE CHANNEL DURING CONSTRUCTION.
3. COMPACTION EQUIPMENT USED TO PLACE BACKFILL BEHIND CHANNEL WALL MUST NOT EXCEED 35,000 POUNDS INCLUDING DYNAMIC FORCED FROM VIBRATOR COMPACTOR.
4. NO EQUIPMENT IN EXCESS OF H-10 HIGHWAY LOADING (AASHTO), AND NO STOCKPILING OF MATERIAL WILL BE PERMITTED ALONG THE CHANNEL WITHIN A DISTANCE OF ONE-HALF WALL HEIGHT.
5. NO EQUIPMENT IN EXCESS OF H-20 HIGHWAY LOADING WILL BE PERMITTED TO OPERATE ON THE INVERT OF THE CHANNEL. ONLY RUBBER-TIRED, LEGALLY LOADED EQUIPMENT SHALL BE OPERATED ON THE EXPOSED CHANNEL INVERT. IF STEEL CRAWLER TYPE EQUIPMENT IS USED, WOODEN MATTING SHALL BE PROVIDED OVER THE INVERT IN THE OPERATING AREA. LOADS FROM TRACK VEHICLES SHALL NOT EXCEED 300 PSF ON A SURFACE AT THE BOTTOM OF THE INVERT SLAB.

LEGEND

- EXISTING JOINT
- DEMOLITION OF CONCRETE CHANNEL LINING
- ORDINARY HIGH WATER MARK (OHWM)

GENERAL NOTES:

1. FOR LA RIVER CONSTRUCTION PHASING SEE DWG D-415.
2. CONTRACTOR SHALL SUBMIT ALL CONSTRUCTION SEQUENCES AND DETAILS IN ACCORDANCE WITH THE SPECIFICATION TO THE ENGINEER FOR APPROVAL PRIOR TO ANY REMOVAL AND CONSTRUCTION. USACE PERMIT IS REQUIRED FOR ANY MODIFICATION TO LA RIVER CHANNEL AND ACCESS RAMP.
3. CONTRACTOR SHALL PROVIDE TEMPORARY WORKS WHICH ALLOW FOR THE PASSAGE OF STORM AND DRAINAGE WATER IN A MANNER EQUIVALENT TO THE EXISTING SYSTEM. THE CAPACITY OF THE CHANNEL SHALL BE MAINTAINED FOR DESIGN Q (104,000 CFS) AS FOLLOWS: 5% OF DESIGN Q FOR JUNE 1 TO AUGUST 31, 33% OF DESIGN Q FOR APRIL 15 TO MAY 31 AND SEPTEMBER 1 TO OCTOBER 15, AND 100% OF DESIGN Q OCTOBER 16 TO APRIL 14. ANY WORK IN THE FLOOD CONTROL CHANNEL SHALL BE PERFORMED DURING THE PERIOD BETWEEN APRIL 15 AND OCTOBER 15. ANY WORK STARTED AFTER APRIL 15 SHALL BE COMPLETED PRIOR TO THE FOLLOWING OCTOBER 15 AND SHALL BE COORDINATED WITH THE AGENCY.
4. CONTRACTOR SHALL MAINTAIN EXISTING ACCESS TUNNEL OPEN FOR USACE OPERATIONS DURING DEMOLITION AND CONSTRUCTION.
5. FOR DEMOLITION OF EXISTING SIXTH STREET BRIDGE SEE DEMOLITION PLANS IN DEMOLITION PACKAGE SUBMITTAL.
6. FOR LA RIVER CHANNEL MODIFICATIONS SEE D-411, D-412, AND D-413.

LEGEND

- PROPOSED PCC PAVEMENT
- TEMPORARY CONSTRUCTION PLATFORM
- ORDINARY HIGH WATER MARK (OHWM)
- LIMITS OF CHANNEL RECONSTRUCTION
- ST-2B — CONSTRUCTION STAGING (STAGE 2 B)

GENERAL NOTES:

1. SUGGESTED STAGE CONSTRUCTION SEQUENCES ARE FOR INFORMATION ONLY. CONTRACTOR CAN ALTER, DELETE, OR ADD ANY SUGGESTED SEQUENCES, STEPS, METHODS TO FIT HIS OWN PLANS, SCHEDULE FOR A SAFER AND RELIABLE CONSTRUCTION.
2. TEMPORARY PLATFORMS AND PIERS ARE TO BE DESIGNED AND DETAILED BY A CALIFORNIA LICENSED ENGINEER WITH CONTRACTOR. ALL DETAILS AND SHOP DRAWINGS SHALL BE SUBMITTED TO BOE FOR APPROVAL PRIOR TO CONSTRUCTION.
3. CONTRACTOR SHALL DESIGN SWPPP. INSTALL TEMPORARY BMPS PRIOR TO CONSTRUCTION, MAINTAIN BMPS THROUGHOUT CONSTRUCTION AND REMOVE AT COMPLETION OF THE PROJECT.
4. FOR ADDITIONAL NOTES SEE DEMOLITION PLAN D-414

SUGGESTED CONSTRUCTION SEQUENCES:

STAGE-1:
- A. IMPLEMENT SWPPP AND INSTALL BMPS
- B. DEMOLISH EXISTING BRIDGE SUPERSTRUCTURE
- C. REMOVE EXISTING BRIDGE CENTER PIER AND CONSTRUCT CONCRETE CHANNEL LINING
- D. CONSTRUCT TEMPORARY PLATFORMS AT THE EASTSIDE AND WESTSIDE

STAGE-2:
- A. COMPLETE DEMOLITION OF EXISTING BRIDGE OVER LA RIVER AND REMOVE EXISTING BRIDGE FOUNDATIONS
- B. DRILL PROPOSED BRIDGE COLUMN FTGS

STAGE-3:
- A. CONSTRUCT LOWER PORTION OF PROPOSED BRIDGE COLUMNS

STAGE-4:
- A. CONSTRUCT TEMPORARY PIER WALLS AT MIDDLE OF CHANNEL (2 LOCATIONS) AND INSTALL FALSEWORK. BOTH PIERS WILL REMAIN IN LA RIVER FULL SEASON DURING CONSTRUCTION
- B. CONSTRUCT UPPER PORTION OF COLUMNS AND BRIDGE SUPERSTRUCTURE

STAGE-5:
- A. CONSTRUCT BRIDGE SUPERSTRUCTURE
- B. REMOVE TEMPORARY PLATFORMS AND PIER WALLS
- C. CONSTRUCT PROPOSED RETAINING WALLS AT WESTSIDE
- D. RECONSTRUCT CHANNEL INVERT SLAB

RESTORATION STRIPING NOTES:

1. THE CONTRACTOR SHALL BE RESPONSIBLE FOR LABOR AND MATERIAL INVOLVED IN THE MARKOUT, AND INSTALLATION OF ALL RESTORATION STRIPING/PAVEMENT MARKINGS. THE CONTRACTOR SHALL ALSO BE RESPONSIBLE FOR REMOVAL OF ALL CONFLICTING DETOUR STRIPING, SIGNING, AND OTHER DETOUR-RELATED TRAFFIC CONTROL DEVICES PRIOR TO THE INSTALLATION OF THE FINAL STRIPING. IF THERE IS NO RESTORATION PLAN IN THIS PACKAGE, CONTRACTOR SHALL CONTACT LADOT GEOMETRIC DESIGN FOR THE LATEST STRIPING PLANS.
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE REPAINTING OF ALL EXISTING STRIPING THAT HAS BEEN DAMAGED DURING THE CONSTRUCTION PROCESS.
3. MARKOUT SHALL BE BY HEAVY PAINT BRUSH MARKINGS OVER A PULLED ROPE IN THE RESPECTIVE WHITE AND YELLOW COLORS OF THE PROPOSED STRIPING. STRIPING AND PAVEMENT MARKINGS SHALL BE IN HOT APPLIED ALKYD THERMOPLASTIC IN ACCORDANCE WITH LADOT SPECIFICATION NOS. 51-005-10 AND 76-012-16. PRIMER AND SEALERS ARE REQUIRED AND SHALL CONFORM TO LADOT SPECIFICATION NO. 76-012-16.
4. THE CONTRACTOR SHALL CONTACT LADOT BRIDGE PROGRAM SECTION AT (213) 972-8491 AT LEAST 10 WORKING DAYS BEFORE BEGINNING MARKOUT. THE CONTRACTOR SHALL CORRECT ALL ERRORS IN MARKOUT REQUESTED BY LADOT. THE INSTALLATION OF THERMOPLASTIC STRIPING MAY PROCEED ONLY AFTER APPROVAL OF MARKOUT BY THE LADOT DISTRICT ENGINEER.
5. TEMPORARY REFLECTIVE RAISED PAVEMENT MARKERS SHALL BE MAINTAINED ADJACENT TO ANY TEMPORARY CENTERLINE, MARKOUT CENTERLINE OR SCAR OF A SANDBLASTED CENTERLINE, AS APPLICABLE, AS PER LADOT STANDARD PLAN NO. S-453.0.

NOTES:

1. SEMI-ACTUATED OPERATION WITH TRANSIT PRIORITY (ATSAC 2070 CONTROLLER IN 332 CABINET)

   ø2 - 6th ST. WB & N/S PED. XING
   ø4 - MATEO ST. SB & W/S PED. XING
   ø6 - 6th ST. EB & S/S PED. XING
   ø8 - MATEO ST. NB & E/S PED. XING

   CENTRAL CITY EAST ATSAC SYSTEM - STAGE 1
   DIRECT WIRE (CABLE) INTERCONNECT

2. REMOVE TRAFFIC SIGNAL EQUIPMENT, FOUNDATION AND PULL BOX. ABANDON CONDUITS.

3. INSTALL ATSAC 2070 CONTROLLER IN 332 CABINET. THE CONTRACTOR SHALL PROVIDE A COMPLETE FUNCTIONING CONTROLLER ASSEMBLY AND CABINET CONFORMING TO THE LATEST LADOT SPECIFICATION FOR 2070 CONTROLLER AND 332 CABINET, AND SHALL INCLUDE ALL NECESSARY AUXILIARY EQUIPMENT TO PROVIDE A COMPLETE FUNCTIONING CONTROLLER. . CONTRACTOR TO DELIVERY COMPLETELY ASSEMBLED CONTROLLER FOR TESTING TO THE DEPARTMENT OF TRANSPORTATION GENERAL SHOP, PIPER TECHNICAL CENTER, 555 RAMIREZ STREET THIRTY (30) DAYS PRIOR TO INSTALLATION. CONTRACTOR TO PICK UP AND INSTALL CONTROLLER ASSEMBLY ON EXISTING F-332 FOUNDATION.

4. INSTALL DETECTOR LOOP(S) PER LADOT STD. DWG. NO. S-70.1A. & S-70.1D (CASE II). CONTRACTOR SHALL OBTAIN APPROVAL FROM LADOT INSPECTOR PRIOR TO INSTALLATION OF ANY LOOPS.

5. JOIN AND EXTEND CONDUIT(S) INTO PULL BOX.

6. ABANDON AND DISCONNECT DETECTOR LOOP(S) IN PULLBOX AS SHOWN.

7. CONTRACTOR SHALL RE-USE EXISTING STUB-OUT. IF STUB-OUT IS NOT IN PLACE, CONTRACTOR SHALL INSTALL NEW STUB-OUT PER LADOT STD. DWG. S-70.1A.

8. FURNISH AND INSTALL ACCESSIBLE PEDESTRIAN SIGNALS (APS) PER LADOT STD. DWG NO. S-73.3. CONTACT LADOT SIGNAL SHOP AT (213) 473-8468 PRIOR TO EQUIPMENT PURCHASE FOR APS SPECIFICATIONS.

9. INSTALL LARGE STREET NAME SIGN (SNS) ON MAST ARM PER LADOT STD. DWG. NOS. S-457.0 AND S-486.0. IF LARGE SNS IS INSTALLED ON SIGNAL POLE STANDARD, USE SIGNFIX CHANNELING. MOUNT WITH UNIVERSAL CLAMP SXQ220. IF LARGE SNS IS INSTALLED ON TYPE 1 OR 1A POLE, USE LADOT SADDLE BRACKET AND GUIDE. COORDINATE WITH MCTM CONSTRUCTION ENGINEER.

10. INSTALL PREFORMED DETECTOR LOOP(S) PER LADOT STD. DWG. NO. S-70.1E. CONTRACTOR SHALL OBTAIN APPROVAL FROM LADOT INSPECTOR PRIOR TO INSTALLATION OF ANY LOOPS.

11. CONTRACTOR SHALL DISCONNECT THE 12-PAIR INTERCONNECT IN THE EXISTING CONTROLLER CABINET (SEE LADOT SPECIAL PROVISIONS, SECTION 5 TITLED "NOTIFICATION", FOR INFORMATION REGARDING WORK AFFECTING MAJOR ATSAC COMMUNICATION FACILITIES). CONTRACTOR MAY REROUTE EXISTING CABLE TO THE PROPOSED CONDUIT ON THIS PLAN BY USING THE COILED SLACK IN THE CONTROLLER CABINET/COMMUNICATION CABINET AND INTERMEDIATE PULL BOXES. IN THE EVENT THAT THE SLACK IN THE CABLE IS NOT SUFFICIENT TO ACCOMPLISH THE PROPOSED INSTALLATION AS SHOWN ON THIS PLAN, THE CONTRACTOR SHALL BE REQUIRED TO INSTALL A NEW 12-PAIR INTERCONNECT FROM THE CONTROLLER CABINET/COMMUNICATION CABINET AT THIS INTERSECTION TO THE CONTROLLER AT: 6th ST. AND ALAMEDA ST. (APPROX. 1800').

12. REMOVE CONTROLLER AND CABINET. RETAIN FOUNDATION.

13. INSTALL TRANSIT PRIORITY LOOP(S) PER LADOT STD. DWG. NO. S-70.1F. CONTRACTOR SHALL OBTAIN APPROVAL FROM LADOT INSPECTOR PRIOR TO INSTALLATION OF ANY LOOPS.

14. INSTALL TRANSIT PRIORITY SENSOR UNITS AND COMMUNICATION CHANNEL CARDS IN CABINET.

15. PROTECT EXISTING DETECTOR LOOP(S).

16. INSTALL STANDARD 4' BEHIND CURB FACE.

17. CONTRACTOR MAY RE-USE THE EXISTING DLC IN THE PULLBOX AS DETERMINED BY THE TRAFFIC SIGNAL INSPECTOR. SHOULD THE CONTRACTOR DAMAGE THE EXISTING CABLE, NEW DLC CABLE SHALL BE INSTALLED FROM THE PULLBOX TO THE CONTROLLER AT THE CONTRACTOR'S EXPENSE.

18. MOUNT PUSHBUTTON AT 3' HEIGHT FROM TOP OF CURB.

19. THE CONTRACTOR SHALL BE RESPONSIBLE FOR LABOR AND MATERIAL INVOLVED IN THE REMOVAL, MARKOUT AND INSTALLATION OF ALL SIGNS, STRIPING AND PAVEMENT MARKINGS PER LADOT GEOMETRIC PLAN A-6505, GEO-401.

20. TRAFFIC CONSULTANT SHALL BE RESPONSIBLE FOR IDENTIFYING AND RESOLVING SUBSTRUCTURE CONFLICT WITH PROPOSED FOUNDATIONS DURING THE DESIGN AND IMPLEMENTATION PHASES OF TRAFFIC SIGNAL EQUIPMENT (SUBJECT TO LADOT APPROVAL).

21. TRAFFIC CONSULTANT SHALL BE RESPONSIBLE FOR IDENTIFYING AND RESOLVING ALL INTERCONNECT (I/C), VIDEO FIBER (V.F.) AND FIBER OPTIC (F.O.) DISCREPANCIES DURING THE DESIGN PHASE AND INSTALLATION OF TRAFFIC SIGNAL EQUIPMENT.

22. ALL VEHICLE HEADS SHOWN ARE 12-INCH UNLESS OTHERWISE NOTED.

23. CONTRACTOR SHALL CONTACT THE TRAFFIC CONSULTANT FOR ANY PROBLEMS ENCOUNTERED DURING CONSTRUCTION. THE TRAFFIC CONSULTANT SHALL CONTACT THE LADOT SIGNAL DESIGN SECTION, AT (213) 928-9640, FOR RESOLUTION OF SIGNAL RELATED CONSTRUCTION PROBLEMS.

24. ALL NEW VEHICLE AND COUNTDOWN PEDESTRIAN TRAFFIC SIGNALS SHALL BE LED MODULE, PER LADOT SPECIFICATION 92-088-07 (LATEST EDITION).

25. SEE STREET LIGHTING SHEET FOR WORK ON STREET LIGHTING FACILITIES.

26. CONTRACTOR SHALL OBSERVE ALL INDUSTRY SAFETY STANDARDS, PARTICULARLY SECTION 2946 AND 2948 OF TITLE 8 OF CAL-OSHA REGARDING WORK NEAR OVERHEAD LINES.

27. THE IMPLEMENTATION OF THIS PLAN SHALL BE IN CONFORMANCE WITH LADOT LATEST STANDARD.

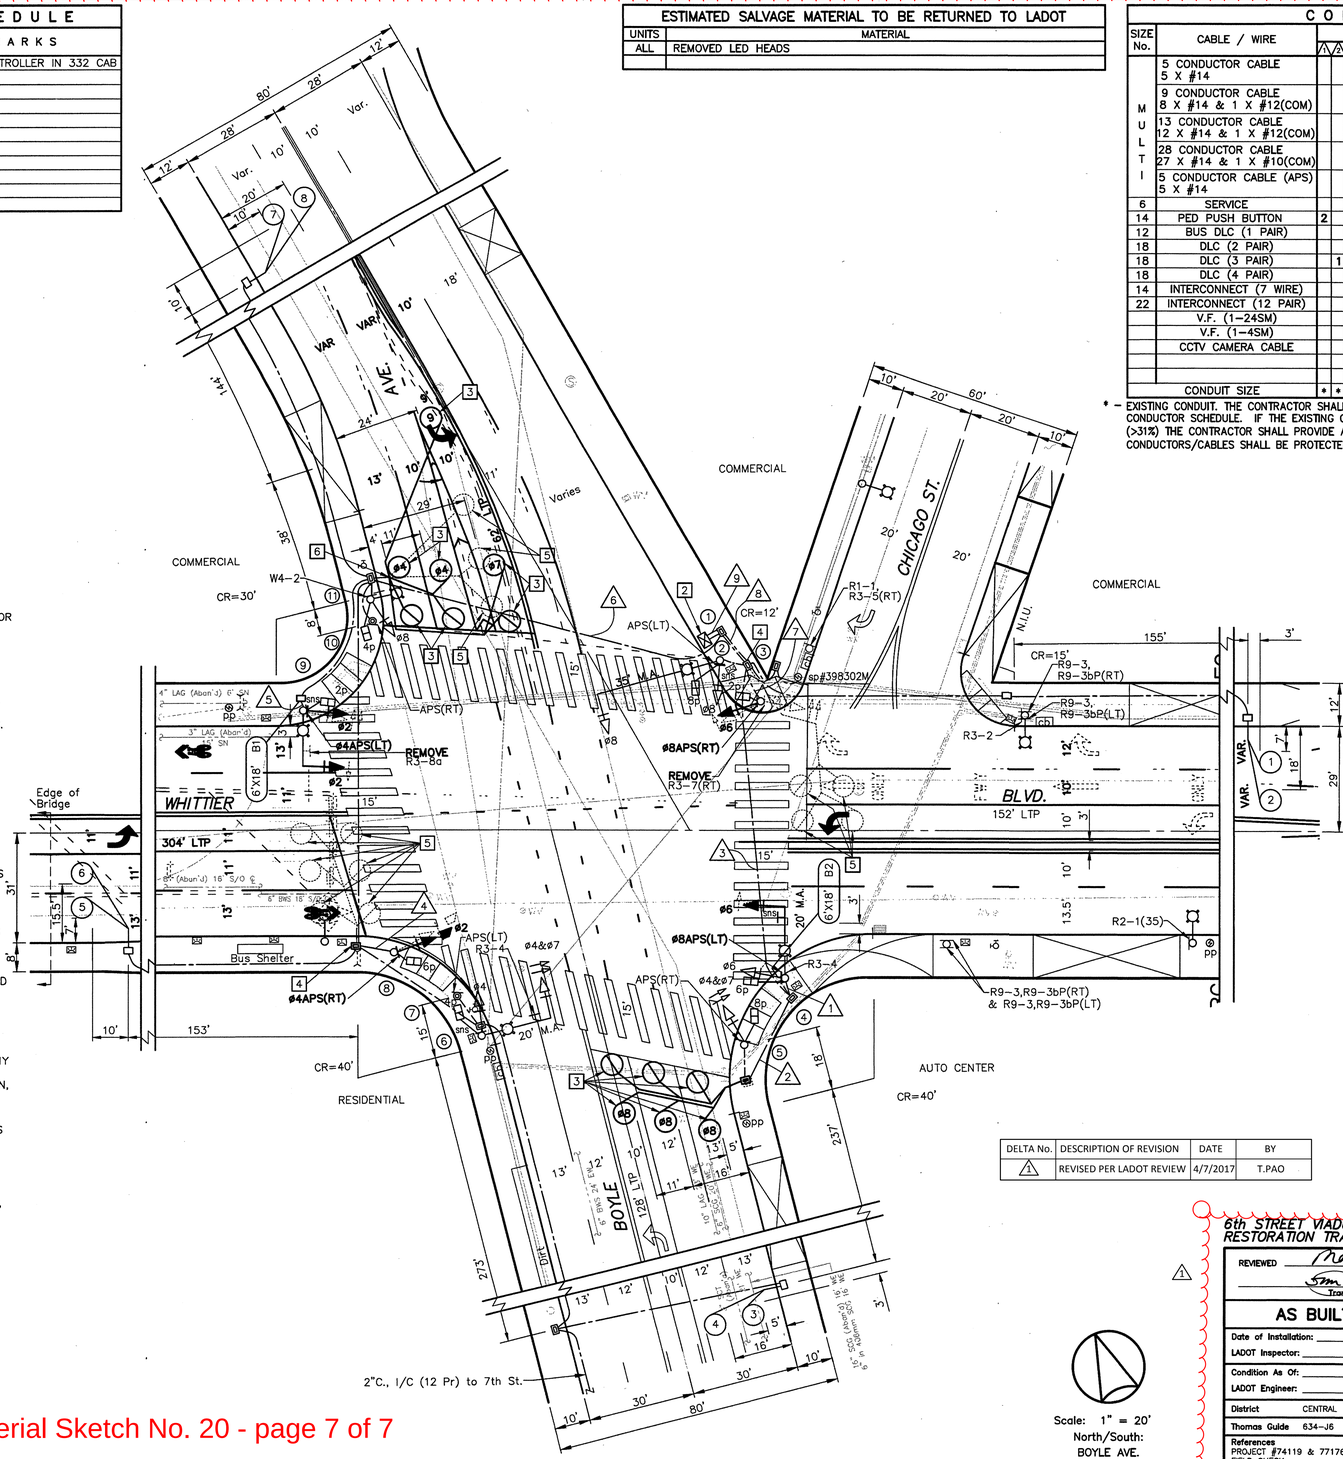
12. ALL NEW VEHICLE AND COUNTDOWN PEDESTRIAN TRAFFIC SIGNALS SHALL BE LED MODULE, PER LADOT SPECIFICATION 92-088-07 (LATEST EDITION).
13. SEE STREET LIGHTING SHEET FOR WORK ON STREET LIGHTING FACILITIES.
14. CONTRACTOR SHALL OBSERVE ALL INDUSTRY SAFETY STANDARDS, PARTICULARLY SECTION 2946 AND 2948 OF TITLE 8 OF CAL-OSHA REGARDING WORK NEAR OVERHEAD LINES.
15. THE IMPLEMENTATION OF THIS PLAN SHALL BE IN CONFORMANCE WITH LADOT LATEST STANDARD.



DELTA No.	DESCRIPTION OF REVISION	DATE	BY
1	REVISED PER LADOT REVIEW	4/7/2017	T.PAO

NOTICE TO CONTRACTOR

1. EXCEPT WHERE OTHERWISE INDICATED, MATERIALS AND INSTALLATION METHODS SHALL CONFORM TO THE LATEST EDITION, WITH SUPPLEMENTS, OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, ADOPTED BY THE CITY OF LOS ANGELES BOARD OF PUBLIC WORKS (LABPW), INCLUDING THE LATEST VERSION OF THE "BROWN BOOK" ISSUED BY THE LABPW, AND THE LATEST EDITION, WITH AMENDMENTS, OF THE SPECIAL PROVISIONS AND STANDARD DRAWINGS FOR THE INSTALLATION AND MODIFICATION OF TRAFFIC SIGNALS, ISSUED BY THE CITY OF LOS ANGELES DEPARTMENT OF TRANSPORTATION (LADOT).
2. ALL TRAFFIC SIGNAL AND/OR RELATED ELECTRICAL WORK SHALL BE PERFORMED AND INSPECTED UNDER THE CONDITIONS OF THE MOST CURRENT AMENDED BOARD OF PUBLIC WORKS "ENHANCED ELECTRICAL SAFETY POLICY" AS REQUIRED IN LADOT'S SPECIAL PROVISIONS AND STANDARD DRAWINGS FOR THE INSTALLATION AND MODIFICATION OF TRAFFIC SIGNALS (RED BOOK), REGARDLESS OF CONTRACT COST.
3. THE LADOT TRAFFIC SIGNAL INSPECTOR AT (213) 485-1071 SHALL BE NOTIFIED THREE (3) WORKING DAYS PRIOR TO THE BEGINNING OF CONSTRUCTION. FOR WORK IN THE AUTOMATED TRAFFIC SURVEILLANCE AND CONTROL (ATSAC) PROJECT AREA, A FIELD MEETING SHALL BE SCHEDULED WITH THE SIGNAL SYSTEM SUPERVISOR AT (213) 473-8286 AND THE SIGNAL MAINTENANCE SUPERVISOR AT (213) 485-7721 THREE (3) WORKING DAYS PRIOR TO THE BEGINNING OF CONSTRUCTION. FULL RESTORATION OF THE ATSAC SYSTEM MUST OCCUR WITHIN FIVE (5) WORKING DAYS AFTER SHUT DOWN.
4. REGULAR TRAFFIC SIGNAL CONTROL SHALL BE MAINTAINED FROM 6:00 A.M. TO 9:00 A.M. AND 3:00 P.M. TO 7:00 P.M. ON WEEKDAYS, EXCEPT NATIONAL HOLIDAYS. FLASHING, DEACTIVATION AND ACTIVATION OF SIGNALS SHALL BE ACCOMPLISHED ONLY BY AN LADOT TRAFFIC SIGNAL ELECTRICIAN. ALL ARRANGEMENTS TO DEACTIVATE SIGNALS SHALL BE MADE 24 HOURS IN ADVANCE BY CONTACTING THE LADOT TRAFFIC SIGNAL DEDICATED LINE AT (213) 473-8478 BEFORE 9 A.M. ON NON-HOLIDAY WEEKDAYS. THE LADOT PROJECT NUMBER MUST BE GIVEN AT THIS TIME. THE CONTRACTOR WILL BE CHARGED FOR ALL ELECTRICAL AND TRAFFIC CONTROL SERVICE PROVIDED BY LADOT.
5. ARRANGEMENTS FOR OBTAINING ANY MATERIALS IDENTIFIED TO BE SUPPLIED BY LADOT SHALL BE MADE TEN (10) WORKING DAYS IN ADVANCE BY CONTACTING THE LADOT FIELD OPERATIONS DIVISION AT (213) 928-9603. HOWEVER, TRAFFIC SIGNAL CONTROLLERS REQUIRE THIRTY (30) WORKING DAYS ADVANCE NOTICE AND MUST BE PICKED UP WITHIN FIFTEEN (15) WORKING DAYS AFTER NOTIFICATION. CONTACT LADOT SIGNAL SHOP AT (213) 473-8468 TO COORDINATE CONTROLLER DELIVERY AND/OR PICKUP.
6. ALL IDENTIFIED TRAFFIC SIGNAL EQUIPMENT SHALL BE RETURNED TO LADOT. ARRANGEMENTS FOR RETURNING IDENTIFIED EQUIPMENT TO LADOT SHALL BE MADE FIVE (5) WORKING DAYS IN ADVANCE BY CONTACTING THE LADOT MATERIAL SERVICES DIVISION AT (213) 928-9636.
7. ALL EXISTING TRAFFIC CONTROL SIGNING SHALL BE MAINTAINED WITH STANDARD SIGN BRACKETS BY THE CONTRACTOR. EXCEPT WHERE OTHERWISE INDICATED, EXISTING LARGE STREET NAME SIGNS ON MAST ARM TYPE STANDARDS SHALL BE RELOCATED FROM THE VERTICAL POLE TO THE MAST ARM PER LADOT STANDARD DRAWING NO. S-457.0 & S-486.0. THE CONTRACTOR SHALL COORDINATE WITH LADOT SIGN SHOP AT (213) 473-7954 FOR ANY REQUIRED LARGE STREET NAME SIGNS. ANY TRAFFIC CONTROL SIGNING DAMAGED OR LOST BY THE CONTRACTOR SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE. SIGNAL CONTRACTOR SHALL INSTALL MAST ARM MOUNTED SIGNS.
8. THE CONTRACTOR SHALL FURNISH AND INSTALL, AS SHOWN ON THE PLANS, ALL TRAFFIC SIGNAL EQUIPMENT SUCH AS STANDARDS, MAST ARMS, SIGNAL HEADS, AND OTHER EQUIPMENT AS REQUIRED. ALL SUCH EQUIPMENT SHALL BE NEW. ALL VEHICLE HEAD EQUIPMENT SUPPLIED BY THE CONTRACTOR SHALL HAVE 1-1/2 INCH DIAMETER PIPE FIT MOUNTING HARDWARE, INCLUDING ALL TOP POST MOUNT HEADS. PED HEAD MODULE REPLACEMENTS SHOWN ON THE PLAN SHALL REQUIRE A COMPLETE INSTALLATION, INCLUDING NEW PED HEAD AND TERMINAL COMPARTMENT.

THE CITY OF LOS ANGELES OR ITS OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF ELECTRONIC COPIES OF THIS PLAN SHEET.

NOTICE TO CONTRACTORS
GENERAL NOTES

1. ALL WORK SHALL CONFORM TO THE LATEST BOARD OF PUBLIC WORKS OF THE CITY OF LOS ANGELES ADOPTED EDITION AND SUPPLEMENTS TO THE "GREENBOOK STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION" AS MODIFIED BY THE CORRESPONDING ISSUE OF THE BROWN BOOK, THE LATEST EDITION OF THE BUREAU OF STREET LIGHTING "SPECIAL SPECIFICATIONS", AND THE SPECIAL PROVISIONS.
2. ELECTROLIERS SHALL BE INSTALLED WITH CENTERLINE 30" BEHIND THE CURB FACE, AND WITH LUMINAIRE ARM ORIENTED OVER THE STREET AND PERPENDICULAR TO ITS CENTER LINE, EXCEPT AS OTHERWISE SPECIFIED HEREON.
3. ELECTROLIERS SPECIFIED TO BE LOCATED INSIDE OF THE CURB RETURN SHALL BE INSTALLED WITH THE CENTER OF THE ELECTROLIER 30 INCHES BEHIND THE CURB FACE MEASURED RADIALLY, AND WITH THE LUMINAIRE ARM ORIENTED OVER THE STREET AND PERPENDICULAR TO THE STREET CENTERLINE.
4. ELECTROLIERS SHALL BE ERECTED SO THAT THE BASE DOOR IS PERPENDICULAR TO THE CURB AND LOCATED ON THE SIDE OF THE ELECTROLIER AWAY FROM ONCOMING TRAFFIC.
5. ALL EXISTING ELECTROLIERS SPECIFIED TO BE REMOVED OR MODIFIED ON THIS PLAN SHALL BE MAINTAINED IN SERVICE UNTIL THE NEW ELECTROLIER LIGHTING SYSTEM IS PLACED IN SERVICE, UNLESS OTHERWISE SPECIFIED HEREON. ALL OTHER ELECTROLIERS ON CIRCUITS AFFECTED BY THIS PLAN SHALL BE MAINTAINED IN SERVICE. CONTRACTOR MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING ELECTROLIER LIGHTS IN SERVICE PROVIDED THAT SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
6. ALL EQUIPMENT REQUIRED HEREON FOR FURNISHING ELECTRICAL SERVICE FOR EACH CIRCUIT SHALL BE INSTALLED AND INSPECTED PRIOR TO ANY OTHER CONSTRUCTION ON THAT CIRCUIT UNLESS OTHERWISE APPROVED BY THE ENGINEER.
7. THE CONTRACTOR SHALL GIVE WRITTEN NOTICE, 72 HOURS IN ADVANCE OF THE REMOVAL OF AN ELECTROLIER, TO ANY PUBLIC AGENCY MAINTAINING EQUIPMENT SUPPORTED BY THAT ELECTROLIER.
8. FOUNDATIONS AND PULLBOXES NOT REMAINING IN SERVICE SHALL BE REMOVED. THE RESULTING EXCAVATION SHALL BE FILLED WITH MATERIAL SIMILAR TO ADJACENT MATERIAL AND SATISFACTORILY COMPACTED WITH A MECHANICAL COMPACTOR IN LAYERS NOT EXCEEDING 12 INCHES. THE SURFACE SHALL BE FINISHED TO MATCH THE ADJACENT SURFACE.
9. THE CONTRACTOR SHALL REQUEST A BURN TEST BY NOTIFYING THE BUREAU OF CONTRACT ADMINISTRATION PROJECT INSPECTOR A MINIMUM OF 7 CALENDAR DAYS IN ADVANCE OF THE DATE ON WHICH A BURN TEST IS DESIRED.
10. CONTRACTOR SHALL GIVE THREE WORKING DAYS NOTICE (PHONE 323-913-4744) PRIOR TO DELIVERY OF ANY EQUIPMENT SPECIFIED TO BE DELIVERED TO THE BUREAU OF STREET LIGHTING YARD AT 4550 SANTA MONICA BLVD.. SUCH DELIVERIES SHALL BE BETWEEN 8:30 AM AND 3:00 PM AND SHALL INCLUDE ALL HANDLING AND LOADING FROM THE TRUCK BY THE CONTRACTOR. CONTRACTOR MUST SUPPLY A COPY OF THE STREET LIGHTING SHEETS WITH THE DELIVERY OF MATERIAL.
11. PULLBOXES LOCATED ADJACENT TO DRIVEWAYS AND ALLEYS SHALL BE INSTALLED AT A MINIMUM DISTANCE OF FIVE FEET FROM THE TOP OF THE "X" OF A CASE 1 OR CASE 2 DRIVEWAY OR AT A MINIMUM DISTANCE OF TWO FEET FROM THE B.C. OF A CASE 3 OR CASE 4 DRIVEWAY OR FIVE FEET FROM TRAVELLED WAY OF THE ALLEY.
12. PULLBOXES INSTALLED AT INTERSECTIONS OF LOCAL STREET SHALL BE INSTALLED NO CLOSER TO THE INTERSECTIONS THAN THE B.C.R. OF AN ASSUMED FUTURE 25' RADIUS CURB RETURN UNLESS OTHERWISE APPROVED BY THE ENGINEER. PULLBOXES INSTALLED AT INTERSECTIONS WHICH INVOLVE ONE OR MORE MAJOR OR SECONDARY STREETS SHALL BE INSTALLED NO CLOSER TO INTERSECTIONS THAN THE B.C.R. OF AN ASSUMED FUTURE 35' RADIUS CURB RETURN UNLESS OTHERWISE APPROVED BY THE ENGINEER.
13. CONDUIT SHALL BE INSTALLED AROUND ALL EXISTING AND/OR PROPOSED CATCH BASINS PER BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-304-0 UNLESS OTHERWISE SPECIFIED.
14. ALL SCREWS PROVIDED FOR ELECTROLIER STANDARD BASE DOORS AND BASE COVERS SHALL BE CADMIUM PLATED STEEL, 1/4-20NC MACHINE SCREWS, WITH PHILLIPS RECESSED ROUND HEADS.
15. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE AFFECTED UTILITY COMPANY BEFORE DOING ANY WORK IN CLOSE PROXIMITY TO ANY OVERHEAD ELECTRIC LINE. SEE SECTIONS 1643.0 AND 2100 OF SPECIAL SPECIFICATIONS.
16. UNLESS OTHERWISE SPECIFIED HEREON, LUMINAIRES SHALL PROVIDE A MEDIUM, CUTOFF, TYPE III, LIGHTING DISTRIBUTION PATTERN CONFORMING TO I.E.S DESIGNATION.
17. CONTRACTOR SHALL BE RESPONSIBLE FOR PRESERVING THE CONDITION OF ALL EXISTING EQUIPMENT TO BE REUSED, MODIFIED OR RETURNED TO THE BUREAU OF STREET LIGHTING YARD.
18. EQUIPMENT INDICATED "DISPOSE" SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND BE DISPOSED OF BY THE CONTRACTOR.
19. STREET LIGHTING CONDUIT SHALL BE INSTALLED BY JACKING OR DRILLING METHODS. INSTALLATION OF CONDUIT BY OPEN TRENCHING IS NOT PERMITTED UNLESS APPROVED BY THE DIRECTOR, BUREAU OF STREET LIGHTING.
20. CONTRACTOR SHALL REPAIR AT HIS COST, THE DAMAGE CAUSED TO EXISTING SPRINKLER SYSTEMS DURING THE CONSTRUCTION OF THIS PROJECT. REPAIRS SHALL BE MADE WITHIN 5 WORKING DAYS AFTER DAMAGE OCCURS.
21. ALL ELECTROLIERS SPECIFIED HEREON SHALL INCLUDE A TYPE 2 PULLBOX, TO BE SUPPLIED AND INSTALLED, UNLESS OTHERWISE SPECIFIED.
22. CONTRACTOR SHALL BE RESPONSIBLE TO ALL EXISTING ELECTROLIERS SPECIFIED TO BE RELOCATED AND MODIFIED ON THIS PLAN. PRIOR TO REINSTALLATION, CONTRACTOR SHALL REPAIR OR REPLACE ALL EXISTING STREET LIGHTING FACILITIES FOUND TO BE DAMAGED PRIOR TO START OF OR DURING THE CONSTRUCTION OF THIS PROJECT AT NO COST TO THE CITY.

SUPPLEMENTAL NOTES

1. CONTRACTOR SHALL LOCATE & PROTECT SUBSTRUCTURE(S) SHOWN HEREON, & SHALL PROVIDE FOR A MINIMUM 12" HORIZONTAL CLEARANCE BETWEEN FOUNDATION & SUBSTRUCTURES. IN THE EVENT A 12" CLEARANCE CANNOT BE ACHIEVED, THE CONTRACTOR SHALL MAKE ARRANGEMENTS FOR RELOCATION OF SUBSTRUCTURES AT NO COST TO THE CITY.
2. IN THE EVENT OF OVERHEAD LINES CONFLICT WITH ELECTROLIERS THE CONTRACTOR SHALL MAKE NECESSARY ARRANGEMENTS WITH THE DEPT. OF WATER AND POWER TO RAISE THEIR OVERHEAD FACILITIES IN ORDER TO PROVIDE FOR THE FOLLOWING CLEARANCES WITH EXISTING AND/OR PROPOSED ELECTROLIERS.
   LOW VOLTAGE: MINIMUM 3' CLEARANCE BETWEEN OVERHEAD LINES AND ELECTROLIERS
   HIGH VOLTAGE: MINIMUM 6' CLEARANCE BETWEEN OVERHEAD LINES AND ELECTROLIERS
3. STREET TREES SHALL NOT BE PLANTED CLOSER THAN 20' FROM EXISTING OR PROPOSED ELECTROLIER, UNLESS OTHERWISE INDICATED.
4. IN THE EVENT OF OVERHEAD COMMUNICATION LINE CONFLICT WITH ELECTROLIERS, CONTRACTOR SHALL MAKE NECESSARY ARRANGEMENTS TO PROVIDE A MINIMUM 12" CLEARANCE.
5. PROPOSED ELECTROLIER FOUNDATIONS AND PULLBOXES SHALL BE INSTALLED OUTSIDE OF ACCESS RAMP AREAS. EXISTING FOUNDATIONS AND PULLBOXES SHALL BE RECONSTRUCTED TO CLEAR ACCESS RAMPS BY A MINIMUM OF 12". EXISTING CONDUIT SHALL BE LOWERED AS NECESSARY PER SEC. 307-2.5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
6. CONDUIT THAT IS TO BE ABANDONED SHALL HAVE WIRES REMOVED. THE CONDUIT SHALL BE REMOVED TO A DEPTH OF AT LEAST 12" BELOW THE SURFACE AND HAVE BOTH ENDS CRIMPED.
7. NOTWITHSTANDING SECTION 16950.2 OF THE SPECIAL SPECIFICATIONS FOR THE CONSTRUCTION STREET LIGHTING SYSTEMS MAGNETIC REGULATING BALLASTS ARE REQUIRED IN ALL COBRA-HEAD LUMINAIRES.
8. ALL #10 AWG WIRES USED FOR MULTIPLE CIRCUIT ELECTROLIER WIRING REFERENCED IN STANDARD DRAWING NO. L-301-1 SHALL BE #10 AWG SOLID COPPER CONDUCTORS.
9. AT LEAST TWO (2) WORKING DAYS PRIOR TO STARTING ANY EXCAVATION. THE CONTRACTOR MUST OBTAIN AN INQUIRY I.D. NUMBER FROM UNDERGROUND SERVICE ALERT BY CALLING (800) 422-4133 OR BY DIALING 811.
10. THE CONTRACTOR SHALL GIVE THE TRAFFIC SIGNAL SUPERINTENDENT (213-220-6597) THREE WORKING DAYS NOTICE BEFORE SCHEDULING WORK THAT WILL REQUIRE COORDINATION WITH THE DEPARTMENT OF TRANSPORTATION, THIS WILL INCLUDE, BUT NOT LIMITED TO, SPECIFIC WORK LOCATIONS INDICATED IN THESE PLANS.

SERIES CIRCUIT NOTES

1. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE SERVING COMPANY, AND "MEN AT WORK" SIGNS SHALL BE POSTED AT THE SERVICE POINT BEFORE ANY WORK IS DONE OR ANY CONNECTIONS MADE ON AN EXISTING CIRCUIT. SEE SECTIONS 1643.0 AND 2100 OF SPECIAL SPECIFICATIONS.
2. COMPOUND RATED FOR 5,000 VOLT OPERATION.
3. TWO OR MORE TURNS OF SELF-ADHESIVE COLORED TAPE WITH A MINIMUM WIDTH OF 1/2 INCH SHALL BE APPLIED TO EACH CABLE IN ALL SERIES CIRCUITS WHERE WORK IS BEING DONE AND WHERE TWO OR MORE CIRCUITS EXIST IN A COMMON PULLBOX OR POST BASE. THE TAPE SHALL BE APPLIED ON THE CABLE BETWEEN THE SPLICES AND THE CONDUIT, USING ONE COLOR FOR EACH CIRCUIT. THE COLORS WHITE, GRAY, GREEN,AND ORANGE SHALL NOT BE USED. SERIES CIRCUIT WIRE SHALL BE NO. 8 AWG STRANDED COPPER CONDUCTOR, INSULATED WITH 0.110" APPROVED POLYETHYLENE
4. CONTRACTOR SHALL GIVE THE BUREAU OF STREET LIGHTING YARD (PHONE 323-913-4744) TWO WORKING DAYS NOTICE BEFORE ANY WORK IS DONE ON AN EXISTING SERIES CIRCUIT.

CIRCUIT DIAGRAM LEGEND

NEW WIRE — NEW LAMP
EXISTING WIRE — EXISTING LAMP
DISCONNECT AND REMOVE WIRE — REMOVE EXISTING LAMP
CONNECT WIRE
DISCONNECT WIRE AND TAPE ENDS

MULTIPLE CIRCUIT NOTES

1. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE SERVING COMPANY BEFORE DOING ANY WORK OR MAKING ANY CONNECTIONS ON AN EXISTING CIRCUIT. SEE SECTIONS 1643.0 AND 2100 OF SPECIAL SPECIFICATIONS.
2. MULTIPLE CIRCUIT WIRE SHALL BE NO. 8 AWG STRANDED COPPER CONDUCTOR. TYPE THWN/THHN INSULATION, UL APPROVED FOR 600 VOLT OPERATION UNLESS OTHERWISE SPECIFIED HEREON.
3. THREE WIRES (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE,) SHALL BE INSTALLED IN ALL MULTIPLE CIRCUIT CONDUIT UNLESS OTHERWISE PROVIDED FOR HEREON.
4. EVEN NUMBERED ELECTROLIERS SHALL BE CONNECTED TO RED AND WHITE WIRES AND ODD NUMBERED ELECTROLIERS SHALL BE CONNECTED TO BLACK AND WHITE WIRES.
5. ELECTROLIERS SHALL BE WIRED PER TYPICAL MULTIPLE CIRCUIT ELECTROLIER WIRING DETAIL, BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1, UNLESS OTHERWISE SPECIFIED.
6. MULTIPLE CIRCUITS IN CONDUITS CONTAINING MORE THAN THREE CONDUCTORS SHALL BE APPROPRIATELY IDENTIFIED BY LABELING CONDUCTORS "A", "B", ETC. WITH APPROVED SELF-LAMINATING LETTER TAPE WRAPPED AT LEAST TWICE AROUND THE CONDUCTOR IN EACH PULLBOX. (W.H. BRADY, SPECIAL SELF-LAMINATING WIRE MARKERS OR EQUIVALENT)

LEGEND

- (R) EXISTING ELECTROLIER TO BE RELOCATED
- EXISTING UTILITARIAN LIGHTS ON WOODEN POLES WHICH SHALL BE MAINTAINED IN SERVICE UNTIL THE PERMANENT ELECTROLIER LIGHTING SYSTEM IS PLACED IN SERVICE. CONTRACTOR MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING UTILITARIAN LIGHTS IN SERVICE PROVIDED THAT SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
- EXISTING ELECTROLIER TO BE REMOVED. (SEE GENERAL NOTE 8)
- NEW ELECTROLIER
- EXISTING ELECTROLIER, NOT TO BE REMOVED OR MODIFIED
- PULLBOX TYPE 2 UNLESS OTHERWISE SHOWN HEREON. (SEE DELTA NOS. 25 & 26). ADDITIONAL PULLBOXES SHALL BE REQUIRED AS SPECIFIED.
- EXISTING PULLBOX
- EXISTING 1" CONDUIT
- EXISTING 1-1/2" CONDUIT
- EXISTING 2" CONDUIT
- NEW 1" CONDUIT
- NEW 1-1/2" CONDUIT
- NEW 2" CONDUIT
- ABANDON CONDUIT (SEE GENERAL NOTE NO.8 & SUPPLEMENTAL NOTE NO.7)
- EXISTING ELECTROLIER FOUNDATION
- FUTURE ELECTROLIER
- PROPOSED CATCH BASIN
- FOR PROP. 218 AND GIS SECTION USE ONLY. (GENERAL BENEFIT)

NOTICE TO CONTRACTORS

FOLLOWING IS A SUMMARY OF NEW ELECTROLIERS, LUMINAIRES, LAMPS, BALLASTS, MATERIAL LIST, FOUNDATIONS AND OTHER EQUIPMENT WHICH SHALL BE SUPPLIED AND INSTALLED BY THE CONTRACTOR. THIS IS NOT INTENDED TO BE A COMPLETE LIST OF ALL MATERIALS REQUIRED

SYMBOL	ITEM	QUANTITY	DESCRIPTION	STANDARD PLAN NO.	REV NO.	NOMINAL WATTAGE
(6)	LUMINAIRE	1	200W HPS EQ. LED (30)			89W
(1) (2) (3) (4) (5)	LUMINAIRE	7	250W HPS EQ. LED (30)			98W
(2)	ELECTROLIER	3	CD953C W/6' ARM & TYPE 2 PULLBOX	B-3685	3	
(3) (4)	ELECTROLIER	2	CAL TYPE 17-3-100 W/6' L.A. & 15' T.S.M.A. & TYPE 2 PULL BOX.	*		
(5) (6)	ELECTROLIER	1	CAL TYPE 19-4-100 W/ TWIN 6' L.A. & 20' T.S.M.A. & TYPE 2 PULL BOX.	*		

* REFER TO D.O.T. TRAFFIC SIGNAL SHEET (COMBINATION TRAFFIC SIGNAL/ST. LTG. POLE) FOR LOCATION AND FOUNDATION DETAILS.

MATERIAL LIST NOTES

1. ALL LUMINAIRES REGARDLESS OF WATTAGE ON LOW VOLTAGE, MULTIPLE CIRCUITS SHALL BE EQUIPPED WITH A MONITORING NODE. THE UNIT SHOULD BE PICKED UP AT THE BUREAU'S PLAN COUNTER AT 1149 S. BROADWAY, SUITE #200, LOS ANGELES, CA 90015. THE UNITS WILL BE PROVIDED FOR A NON-REFUNDABLE FEE (APPROXIMATELLY $155.00 PER UNIT). THE CONTRACTOR SHALL GIVE SEVEN WORKING DAYS NOTICE (TELEPHONE 231 847-1498) PRIOR TO PICKING UP THE MONITORING UNITS. NODES SHALL BE INSTALLED INTO THE PHOTOELECTRIC CONTROL STANDARD SOCKET PER INSI/NEMA C-136.10 AND SHALL BE ORIENTED IN A NORTHERLY DIRECTION. A SEPARATE P.E. CELL IS NOT REQUIRED FOR LUMINAIRES EQUIPPED WITH A REMOTE MONITORING NODE.

(R) INDICATES REMOVE EXISTING LED LUMINAIRE. REMOVED LED LUMINAIRE SHALL BE SALVAGED. SEE DELTA NOTE 27.
INSTALL NEW EQUIPMENT PER MATERIAL LIST. INSTALL AWG. #10 WIRES BETWEEN PULLBOX AND LUMINAIRE AND FUSE KIT HOLDER PER STD. DRAWING L-301-1.

INDICATES EXISTING ELECTROLIER, LUMINAIRE, AND LAMP TO BE REMOVED. REMOVED LED LUMINAIRE SHALL BE SALVAGED. SEE DELTA NOTE 27.

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 1

THE STREET LIGHTING EQUIPMENT ON THIS PLAN MAY BE SUBJECT TO CHANGE ("GREEN BOOK" 2006 §307-1.3). THE CONTRACTOR SHALL NOT ORDER ANY NEW STREET LIGHTING EQUIPMENT PRIOR TO APPROVAL BY THE BUREAU OF STREET LIGHTING, EQUIPMENT APPROVAL SECTION (M-40 FORM). CONTACT (213) 847-1831 FOR MORE INFORMATION.

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 2

CONTRACTOR SHALL NOTIFY THE STREET LIGHTING ENGINEER (TELEPHONE: 212-847-1459) A MINIMUM OF SEVEN (7) WORKING DAYS PRIOR TO WORKING ON ANY ELECTROLIER, WITH EXISTING TELECOMMUNICATION EQUIPMENT, WHICH REQUIRES REMOVAL AND/OR RELOCATION.

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 3
TEMPORARY STREET LIGHTING SYSTEM REQUIREMENT

TEMPORARY STREET LIGHTING SYSTEMS ARE REQUIRED FOR ALL PUBLIC, RIGHT-OF-WAY (ROADWAY, SIDEWALKS, WALKWAYS, UNDERPASSES, DETOUR ROADS, ETC.) WHERE EXISTING STREET LIGHTING SYSTEMS ARE BEING REPLACED OR NEW STREET LIGHTING SYSTEMS ARE BEING CONSTRUCTED.

PROCEDURE FOR STREET LIGHT CIRCUIT CLEARANCE

- HIGH VOLTAGE CIRCUIT CLEARANCE REQUESTS SHALL BE MADE TO THE BUREAU OF STREET LIGHTING AND WILL BE PERFORMED BY CITY CREWS.
- LOW VOLTAGE CIRCUIT CLEARANCE SHALL BE PERFORMED BY THE QUALIFIED CONTRACTOR RESPONSIBLE FOR CONSTRUCTION PROJECTS.
- PRIOR TO CONSTRUCTION, THE CONTRACTOR SHALL SUBMIT TWO (2) COPIES OF THE PLAN (24"X36") AND NOTIFY THE INSPECTOR TO SUBMIT "CONSTRUCTION START NOTICE" AND M-21 FORM TO LADWP STREET LIGHT SUPPORT (1141 W. SECOND STREET, BUILDING B, 3RD FLOOR LOS ANGELES, 90012)

FOR DETAILED PROCEDURES, SEE WWW.bsl.lacity.org
(CLICK ON THE BUSINESS/CONTRACTORS LINK).

(30) THE LUMINAIRE CATALOG NUMBERS ARE AS FOLLOWS OR BSL APPROVED EQUAL:
200W HPS EQ. (LEOTEK ECOBRA 11M) EC3-11M-MV-NW-3-GY-650-PCR7
250W HPS EQ. (LEOTEK ECOBRA 14M @ 530mA) EC4-14M-MV-NW-3-GY-530-PCR7

(29) THE CONTRACTOR SHALL VALIDATE THE CATALOG NUMBERS WITH THE BUREAU OF STREET LIGHTING (PHONE NO. 213-847-1347) PRIOR TO M-40 SUBMITTAL.

(28) INSTALL TYPE 3 PULLBOX. ALL TYPE 3 PULLBOXES SHALL BE OF "COMPOSITE/POLYMER" MATERIAL, W/BOLT-DOWN LID AND SHALL COMPLY WITH STANDARD PLAN "COMPOSITE TYPE 3_REV. A" AND APPROVED BY BUREAU OF STREET LIGHTING.

(27) THE CONTRACTOR SHALL MAKE NECESSARY ARRANGEMENT AND USE EXTREME CARE IN REMOVING AND TRANSPORTING EXISTING TO THE BUREAU OF STREET LIGHTING FIELD OPERATIONS DIVISION (FOD) YARD. REFER TO GENERAL NOTE 10.

(26) INSTALL FUSE HOLDER(S), FUSE(S) AND CONNECT WIRES INSIDE TYPE 2 PULLBOX.

(25) INSTALL TYPE 2 PULLBOX. ALL PULLBOXES SPECIFIED SHALL BE OF "COMPOSITE/POLYMER" MATERIAL WITH BOLT-DOWN LID AND SHALL COMPLY WITH STANDARD PLAN "COMPOSITE TYPE 2_REV. B" AND APPROVED BY BUREAU OF STREET LIGHTING.

(24) TAPE ENDS OF SPARE WIRE.

(23) INSTALL THREE MULTIPLE CIRCUIT WIRES. (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE)

(22) REMOVE EXISTING STREET LIGHTING WIRES.

(21) MULTIPLE SERVICE LOCATION. INTERCEPT CONDUIT INSTALLED BY OTHERS AND INSTALL TYPE 3 SERVICE PULLBOX. VERIFY EXACT LOCATION OF CONDUIT. PHONE DEPT. OF WATER AND POWER UNDERGROUND ENGINEERING FIVE DAYS PRIOR TO START OF WORK AT THIS LOCATION. (PHONE: 213-367-9966).

(20) CONTRACTOR SHALL REQUEST A PERMIT TO PRUNE TREE FROM THE URBAN FORESTRY DIVISION (213) 847-3077, FIVE DAYS PRIOR TO THE INSTALLATION OF ELECTROLIER. ALL TREE WORK SHALL BE PERFORMED TO TREE CARE PROFESSION BEST MANAGEMENT PRACTICES AND TO THE SATISFACTION OF THE URBAN FORESTRY DIVISION.

(19) INSTALL APPROVED CONNECTING DEVICES PER DETAIL "B", BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1.

(18) INSTALL APPROVED CONNECTING DEVICES PER DETAIL "A", BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1.

(17) MULTIPLE SERVICE LOCATION. INSTALL 10' OF 2" GALVANIZED CONDUIT SERVICE RISER ON POLE. EXTEND CONDUIT TO THE ALLEY B.C. AND INSTALL TYPE 3 PULLBOX UNLESS OTHERWISE SPECIFIED. INSTALL PULLWIRE.

(16) INSTALL FIVE MULTIPLE CIRCUIT WIRES: (COLOR CODE: 2-RED, 2-BLACK, 1-WHITE)

(15) INSTALL TWO MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-BLACK, 1-WHITE)

(14) INSTALL TWO MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-RED, 1-WHITE)

(13) INSTALL 1" CONDUIT BEND.

(12) INSTALL ADDITIONAL 2" CONDUIT BEND FOR TRAFFIC SIGNAL WIRING.

(11) INSTALL ONE APPROVED FUSE HOLDER WITH 30 AMP FUSE BETWEEN EACH SERVICE WIRE (NOT NEUTRAL WIRE) OR SERVICE WIRE CONNECTING DEVICE AND STREET LIGHTING CIRCUIT WIRE. SERVING COMPANY WILL INSTALL SERVICE.

(10) JOIN CONDUIT

(9) MULTIPLE SERVICE LOCATION. INSTALL TYPE 3 PULLBOX UNLESS OTHERWISE SPECIFIED AND 10' OF 2" GALVANIZED CONDUIT SERVICE RISER ON POLE. INSTALL PULLBOX NO CLOSER THAN 5' AND NO FARTHER THAN 15' FROM THE SERVICE POLE.

(8) SERIES SERVICE POLE. INSTALL ONE TERMINAL CUTOFF BOX STANDARD PLAN B-3724 WITH ONE DISCONNECTING SWITCH FOR EACH CIRCUIT. SERVING COMPANY WILL INSTALL SERVICE.

(7) CONSTRUCT CASE 4 DRIVEWAY RETURN PER STANDARD PLAN NO. S-440

(6) CONSTRUCT CASE 3 DRIVEWAY RETURN PER STANDARD PLAN NO. S-440.

(5) INTERCEPT CONDUIT AND INSTALL PULLBOX.

(4) THREAD AND CAP CONDUIT AT END OF IMPROVEMENT.

(3) INSTALL CONDUIT ONLY.

(2) CONNECT WIRES (PER CIRCUIT DIAGRAM WHERE APPLICABLE).

(1) TERMINATE CONDUIT IN STREET LIGHTING PULLBOX.
THE ABOVE NOTES ARE APPLICABLE ONLY WHERE SPECIFIED ON THIS PLAN.

DELTA NOTES

CITY OF LOS ANGELES
DEPARTMENT OF PUBLIC WORKS
BUREAU OF STREET LIGHTING

ADDENDUM 5

THE CITY OF LOS ANGELES OR ITS OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF ELECTRONIC COPIES OF THIS PLAN SHEET.

NOTICE TO CONTRACTORS GENERAL NOTES

1. ALL WORK SHALL CONFORM TO THE LATEST BOARD OF PUBLIC WORKS OF THE CITY OF LOS ANGELES ADOPTED EDITION AND SUPPLEMENTS TO THE "GREENBOOK STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION" AS MODIFIED BY THE CORRESPONDING ISSUE OF THE BROWN BOOK, THE LATEST EDITION OF THE BUREAU OF STREET LIGHTING "SPECIAL SPECIFICATIONS", AND THE SPECIAL PROVISIONS.
2. ELECTROLIERS SHALL BE INSTALLED WITH CENTERLINE 30" BEHIND THE CURB FACE, AND WITH LUMINAIRE ARM ORIENTED OVER THE STREET AND PERPENDICULAR TO ITS CENTER LINE, EXCEPT AS OTHERWISE SPECIFIED HEREON.
3. ELECTROLIERS SPECIFIED TO BE LOCATED INSIDE OF THE CURB RETURN SHALL BE INSTALLED WITH THE CENTER OF THE ELECTROLIER 30 INCHES BEHIND THE CURB FACE MEASURED RADIALLY, AND WITH THE LUMINAIRE ARM ORIENTED OVER THE STREET AND PERPENDICULAR TO THE STREET CENTERLINE.
4. ELECTROLIERS SHALL BE ERECTED SO THAT THE BASE DOOR IS PERPENDICULAR TO THE CURB AND LOCATED ON THE SIDE OF THE ELECTROLIER AWAY FROM ONCOMING TRAFFIC.
5. ALL EXISTING ELECTROLIERS SPECIFIED TO BE REMOVED OR MODIFIED ON THIS PLAN SHALL BE MAINTAINED IN SERVICE UNTIL THE NEW ELECTROLIER LIGHTING SYSTEM IS PLACED IN SERVICE, UNLESS OTHERWISE SPECIFIED HEREON. ALL OTHER ELECTROLIERS ON CIRCUITS AFFECTED BY THIS PLAN SHALL BE MAINTAINED IN SERVICE. CONTRACTOR MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING ELECTROLIER LIGHTS IN SERVICE PROVIDED THAT SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
6. ALL EQUIPMENT REQUIRED HEREON FOR FURNISHING ELECTRICAL SERVICE FOR EACH CIRCUIT SHALL BE INSTALLED AND INSPECTED PRIOR TO ANY OTHER CONSTRUCTION ON THAT CIRCUIT UNLESS OTHERWISE APPROVED BY THE ENGINEER.
7. THE CONTRACTOR SHALL GIVE WRITTEN NOTICE, 72 HOURS IN ADVANCE OF THE REMOVAL OF AN ELECTROLIER, TO ANY PUBLIC AGENCY MAINTAINING EQUIPMENT SUPPORTED BY THAT ELECTROLIER.
8. FOUNDATIONS AND PULLBOXES NOT REMAINING IN SERVICE SHALL BE REMOVED. THE RESULTING EXCAVATION SHALL BE FILLED WITH MATERIAL SIMILAR TO ADJACENT MATERIAL AND SATISFACTORILY COMPACTED WITH A MECHANICAL COMPACTOR IN LAYERS NOT EXCEEDING 12 INCHES. THE SURFACE SHALL BE FINISHED TO MATCH THE ADJACENT SURFACE.
9. THE CONTRACTOR SHALL REQUEST A BURN TEST BY NOTIFYING THE BUREAU OF CONTRACT ADMINISTRATION PROJECT INSPECTOR A MINIMUM OF 7 CALENDAR DAYS IN ADVANCE OF THE DATE ON WHICH A BURN TEST IS DESIRED.
10. CONTRACTOR SHALL GIVE THREE WORKING DAYS NOTICE (PHONE 323-913-4743) PRIOR TO DELIVERY OF ANY EQUIPMENT SPECIFIED TO BE DELIVERED TO THE BUREAU OF STREET LIGHTING YARD AT 4550 SANTA MONICA BLVD.. SUCH DELIVERIES SHALL BE BETWEEN 8:30 AM AND 3:00 PM AND SHALL INCLUDE ALL HANDLING AND LOADING FROM THE TRUCK BY THE CONTRACTOR. CONTRACTOR MUST SUPPLY A COPY OF THE STREET LIGHTING SHEETS WITH THE DELIVERY OF MATERIAL.
11. PULLBOXES LOCATED ADJACENT TO DRIVEWAYS AND ALLEYS SHALL BE INSTALLED AT A MINIMUM DISTANCE OF FIVE FEET FROM THE TOP OF THE "X" OF A CASE 1 OR CASE 2 DRIVEWAY OR AT A MINIMUM DISTANCE OF TWO FEET FROM THE B.C. OF A CASE 3 OR CASE 4 DRIVEWAY OR FIVE FEET FROM TRAVELLED WAY OF THE ALLEY.
12. PULLBOXES INSTALLED AT INTERSECTIONS OF LOCAL STREET SHALL BE INSTALLED NO CLOSER TO THE INTERSECTIONS THAN THE B.C.R. OF AN ASSUMED FUTURE 25' RADIUS CURB RETURN UNLESS OTHERWISE APPROVED BY THE ENGINEER. PULLBOXES INSTALLED AT INTERSECTIONS WHICH INVOLVE ONE OR MORE MAJOR OR SECONDARY STREETS SHALL BE INSTALLED NO CLOSER TO INTERSECTIONS THAN THE B.C.R. OF AN ASSUMED FUTURE 35' RADIUS CURB RETURN UNLESS OTHERWISE APPROVED BY THE ENGINEER.
13. CONDUIT SHALL BE INSTALLED AROUND ALL EXISTING AND/OR PROPOSED CATCH BASINS PER BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-304-0 UNLESS OTHERWISE SPECIFIED.
14. ALL SCREWS PROVIDED FOR ELECTROLIER STANDARD BASE DOORS AND BASE COVERS SHALL BE CADMIUM PLATED STEEL, 1/4-20NC MACHINE SCREWS, WITH PHILLIPS RECESSED ROUND HEADS.
15. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE AFFECTED UTILITY COMPANY BEFORE DOING ANY WORK IN CLOSE PROXIMITY TO ANY OVERHEAD ELECTRIC LINE. SEE SECTIONS 16430 AND 2100 OF SPECIAL SPECIFICATIONS.
16. UNLESS OTHERWISE SPECIFIED HEREON, LUMINAIRES SHALL PROVIDE A MEDIUM, CUTOFF, TYPE III, LIGHTING DISTRIBUTION PATTERN CONFORMING TO I.E.S DESIGNATION.
17. CONTRACTOR SHALL BE RESPONSIBLE FOR PRESERVING THE CONDITION OF ALL EXISTING EQUIPMENT TO BE REUSED, MODIFIED OR RETURNED TO THE BUREAU OF STREET LIGHTING YARD.
18. EQUIPMENT INDICATED "DISPOSE" SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND BE DISPOSED OF BY THE CONTRACTOR.
19. STREET LIGHTING CONDUIT SHALL BE INSTALLED BY JACKING OR DRILLING METHODS. INSTALLATION OF CONDUIT BY OPEN TRENCHING IS NOT PERMITTED UNLESS APPROVED BY THE DIRECTOR, BUREAU OF STREET LIGHTING.
20. CONTRACTOR SHALL REPAIR AT HIS COST, THE DAMAGE CAUSED TO EXISTING SPRINKLER SYSTEMS DURING THE CONSTRUCTION OF THIS PROJECT. REPAIRS SHALL BE MADE WITHIN 5 WORKING DAYS AFTER DAMAGE OCCURS.
21. ALL ELECTROLIERS SPECIFIED HEREON SHALL INCLUDE A TYPE 2 PULLBOX, TO BE SUPPLIED AND INSTALLED, UNLESS OTHERWISE SPECIFIED.
22. CONTRACTOR SHALL BE RESPONSIBLE TO ALL EXISTING ELECTROLIERS SPECIFIED TO BE RELOCATED AND MODIFIED ON THIS PLAN. PRIOR TO REINSTALLATION, CONTRACTOR SHALL REPAIR OR REPLACE ALL EXISTING STREET LIGHTING FACILITIES FOUND TO BE DAMAGED PRIOR TO START OF OR DURING THE CONSTRUCTION OF THIS PROJECT AT NO COST TO THE CITY.

SUPPLEMENTAL NOTES

1. CONTRACTOR SHALL LOCATE & PROTECT SUBSTRUCTURE(S) SHOWN HEREON, & SHALL PROVIDE FOR A MINIMUM 12" HORIZONTAL CLEARANCE BETWEEN FOUNDATION & SUBSTRUCTURES. IN THE EVENT A 12" CLEARANCE CANNOT BE ACHIEVED, THE CONTRACTOR SHALL MAKE ARRANGEMENTS FOR RELOCATION OF SUBSTRUCTURES AT NO COST TO THE CITY.
2. IN THE EVENT OF OVERHEAD LINES CONFLICT WITH ELECTROLIERS THE CONTRACTOR SHALL MAKE NECESSARY ARRANGEMENTS WITH THE DEPT. OF WATER AND POWER TO RAISE THEIR OVERHEAD FACILITIES IN ORDER TO PROVIDE FOR THE FOLLOWING CLEARANCES WITH EXISTING AND/OR PROPOSED ELECTROLIERS.
   LOW VOLTAGE: MINIMUM 3' CLEARANCE BETWEEN OVERHEAD LINES AND ELECTROLIERS
   HIGH VOLTAGE: MINIMUM 6' CLEARANCE BETWEEN OVERHEAD LINES AND ELECTROLIERS
3. STREET TREES SHALL NOT BE PLANTED CLOSER THAN 20' FROM EXISTING OR PROPOSED ELECTROLIER, UNLESS OTHERWISE INDICATED.
4. IN THE EVENT OF OVERHEAD COMMUNICATION LINE CONFLICT WITH ELECTROLIERS, CONTRACTOR SHALL MAKE NECESSARY ARRANGEMENTS TO PROVIDE A MINIMUM 12" CLEARANCE.
5. PROPOSED ELECTROLIER FOUNDATIONS AND PULLBOXES SHALL BE INSTALLED OUTSIDE OF ACCESS RAMP AREAS. EXISTING FOUNDATIONS AND PULLBOXES SHALL BE RECONSTRUCTED TO CLEAR ACCESS RAMPS BY A MINIMUM OF 12". EXISTING CONDUIT SHALL BE LOWERED AS NECESSARY PER SEC. 307-2.5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
6. CONDUIT THAT IS TO BE ABANDONED SHALL HAVE WIRES REMOVED. THE CONDUIT SHALL BE REMOVED TO A DEPTH OF AT LEAST 12" BELOW THE SURFACE AND HAVE BOTH ENDS CRIMPED.
7. NOTWITHSTANDING SECTION 16950.2 OF THE SPECIAL SPECIFICATIONS FOR THE CONSTRUCTION STREET LIGHTING SYSTEMS MAGNETIC REGULATING BALLASTS ARE REQUIRED IN ALL COBRA-HEAD LUMINAIRES.
8. ALL #10 AWG WIRES USED FOR MULTIPLE CIRCUIT ELECTROLIER WIRING REFERENCED IN STANDARD DRAWING NO. L-301-1 SHALL BE #10 AWG SOLID COPPER CONDUCTORS.
9. AT LEAST TWO (2) WORKING DAYS PRIOR TO STARTING ANY EXCAVATION. THE CONTRACTOR MUST OBTAIN AN INQUIRY I.D. NUMBER FROM UNDERGROUND SERVICE ALERT BY CALLING (800) 422-4133 OR BY DIALING 811.

SERIES CIRCUIT NOTES

1. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE SERVING COMPANY, AND "MEN AT WORK" SIGNS SHALL BE POSTED AT THE SERVICE POINT BEFORE ANY WORK IS DONE OR ANY CONNECTIONS MADE ON AN EXISTING CIRCUIT. SEE SECTIONS 16430 AND 2100 OF SPECIAL SPECIFICATIONS.
2. SERIES CIRCUIT WIRE SHALL BE NO. 8 AWG STRANDED COPPER CONDUCTOR, INSULATED WITH 0.110" APPROVED POLYETHYLENE COMPOUND RATED FOR 5,000 VOLT OPERATION.
3. TWO OR MORE TURNS OF SELF-ADHESIVE COLORED TAPE WITH A MINIMUM WIDTH OF 1/2 INCH SHALL BE APPLIED TO EACH CABLE IN ALL SERIES CIRCUITS WHERE WORK IS BEING DONE AND WHERE TWO OR MORE CIRCUITS EXIST IN A COMMON PULLBOX OR POST BASE. THE TAPE SHALL BE APPLIED ON THE CABLE BETWEEN THE SPLICES AND THE CONDUIT, USING ONE COLOR FOR EACH CIRCUIT. THE COLORS WHITE, GRAY, GREEN,AND ORANGE SHALL NOT BE USED.
4. CONTRACTOR SHALL GIVE THE BUREAU OF STREET LIGHTING YARD (PHONE 323-913-4744) TWO WORKING DAYS NOTICE BEFORE ANY WORK IS DONE ON AN EXISTING SERIES CIRCUIT.

MULTIPLE CIRCUIT NOTES

1. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE SERVING COMPANY BEFORE DOING ANY WORK OR MAKING ANY CONNECTIONS ON AN EXISTING CIRCUIT. SEE SECTIONS 16430 AND 2100 OF SPECIAL SPECIFICATIONS.
2. MULTIPLE CIRCUIT WIRE SHALL BE NO. 8 AWG STRANDED COPPER CONDUCTOR. TYPE THWN/THHN INSULATION, UL APPROVED FOR 600 VOLT OPERATION UNLESS OTHERWISE SPECIFIED HEREON.
3. THREE WIRES (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE,) SHALL BE INSTALLED IN ALL MULTIPLE CIRCUIT CONDUIT UNLESS OTHERWISE PROVIDED FOR HEREON.
4. EVEN NUMBERED ELECTROLIERS SHALL BE CONNECTED TO RED AND WHITE WIRES AND ODD NUMBERED ELECTROLIERS SHALL BE CONNECTED TO BLACK AND WHITE WIRES.
5. ELECTROLIERS SHALL BE WIRED PER TYPICAL MULTIPLE CIRCUIT ELECTROLIER WIRING DETAIL, BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1, UNLESS OTHERWISE SPECIFIED.
6. MULTIPLE CIRCUITS IN CONDUITS CONTAINING MORE THAN THREE CONDUCTORS SHALL BE APPROPRIATELY IDENTIFIED BY LABELING CONDUCTORS "A", "B", ETC. WITH APPROVED SELF-LAMINATING LETTER TAPE WRAPPED AT LEAST TWICE AROUND THE CONDUCTOR IN EACH PULLBOX. (W.H. BRADY, SPECIAL SELF-LAMINATING WIRE MARKERS OR EQUIVALENT)

LEGEND

- EXISTING ELECTROLIER TO BE RELOCATED
- EXISTING UTILITARIAN LIGHTS ON WOODEN POLES WHICH SHALL BE MAINTAINED IN SERVICE UNTIL THE PERMANENT ELECTROLIER LIGHTING SYSTEM IS PLACED IN SERVICE. CONTRACTOR MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING UTILITARIAN LIGHTS IN SERVICE PROVIDED THAT SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
- EXISTING ELECTROLIER TO BE REMOVED. (SEE GENERAL NOTE 8)
- NEW ELECTROLIER
- EXISTING ELECTROLIER, NOT TO BE REMOVED OR MODIFIED
- PULLBOX TYPE 2 UNLESS OTHERWISE SHOWN HEREON. (SEE DELTA NO. 26). ADDITIONAL PULLBOXES SHALL BE REQUIRED AS SPECIFIED.
- EXISTING PULLBOX
- EXISTING 1" CONDUIT
- EXISTING 1-1/2" CONDUIT
- EXISTING 2" CONDUIT
- NEW 1" CONDUIT

NOTICE TO CONTRACTORS MATERIAL LIST

FOLLOWING IS A SUMMARY OF NEW ELECTROLIERS, LUMINAIRES, LAMPS, BALLASTS, FOUNDATIONS, AND OTHER EQUIPMENT WHICH SHALL BE SUPPLIED AND INSTALLED BY THE CONTRACTOR. THIS IS NOT INTENDED TO BE A COMPLETE LIST OF ALL MATERIALS REQUIRED

SYMBOL	ITEM	QUANTITY	DESCRIPTION	STANDARD PLAN NO.	REV. NO.	NOMINAL WATTAGE
① ②	ELECTROLIER	6	CD-953C WITH 4' LUMINAIRE ARM, TYPE 2 PULLBOX	B-3685	3	
①	LUMINAIRE	4	150W HPS EQ. LED △29			64W
②	LUMINAIRE	2	250W HPS EQ. LED △29			159W
① ②	ROAM	6	REMOTE MONITORING NODE △30			

△30 ALL COBRAHEAD LUMINAIRES REGARDLESS OF WATTAGE ON LOW VOLTAGE, MULTIPLE CIRCUITS SHALL BE EQUIPPED WITH A MONITORING NODE. THE UNIT SHOULD BE PICKED UP AT THE BUREAU'S PLAN COUNTER AT 1149 S. BROADWAY, SUITE #200, LOS ANGELES, CA 90015. THE UNITS WILL BE PROVIDED FOR A NON-REFUNDABLE FEE (APPROXIMATELY $ 100.00 PER UNIT). THE CONTRACTOR SHALL GIVE SEVEN WORKING DAYS NOTICE (TELEPHONE 231 847-1498) PRIOR TO PICKING UP THE MONITORING UNITS. NODES SHALL BE INSTALLED INTO THE PHOTOELECTRIC CONTROL STANDARD SOCKET PER INSI/NEMA C-136.10 AND SHALL BE ORIENTED IN A NORTHERLY DIRECTION. A SEPARATE P.E. CELL IS NOT REQUIRED FOR LUMINAIRES EQUIPPED WITH A REMOTE MONITORING NODE.

△29 THE LUMINAIRE CATALOG NUMBERS ARE AS FOLLOWS OR BSL APPROVED EQUAL:
150W HPS EQ. LED (CREE XSP2Φ€) CAT. # BXS9002$-E BXSPA03HE-USQR
250W HPS EQ. LED (LEOTEK GCOBRA 90E) CAT. # GC2-90E-MV-NW-3-GY-530

△28 INSTALL TYPE 3 PULLBOX FOR DWP SERVICE. ALL TYPE 3 PULLBOXES SHALL BE OF "COMPOSITE/POLYMER" MATERIAL, W/BOLT-DOWN LID AND SHALL COMPLY WITH STANDARD PLAN "COMPOSITE TYPE 3, REV A" AND APPROVED BY BUREAU OF STREETLIGHTING.

△27 CONTRACTOR SHALL LOCATE AND PROTECT STREET LIGHTING PULLBOX PRIOR TO TERMINATING NEW CONDUIT TO PULLBOX. IN THE EVENT THE PULLBOX DOES NOT EXIST OR IS MISSING, THE CONTRACTOR SHALL CONTACT THE PRIVATE ENGINEER (ENGINEER ON RECORD) AND BUREAU OF STREET LIGHTING TO OBTAIN AN APPROVAL FOR THE INSTALLATION OF NEW PULLBOX AT NO COST TO THE CITY.

△26 INSTALL FUSE HOLDER(S), FUSE(S) AND CONNECT WIRES INSIDE TYPE 2 PULLBOX.

△25 INSTALL TYPE 2 PULLBOX. ALL PULLBOXES SPECIFIED SHALL BE OF "COMPOSITE/POLYMER" MATERIAL WITH BOLT-DOWN LID AND SHALL COMPLY WITH STANDARD PLAN "COMPOSITE TYPE 2, REV B" AND APPROVED BY BUREAU OF STREETLIGHTING.

△24 TAPE ENDS OF SPARE WIRE.

△23 INSTALL THREE MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE)

△22 REMOVE EXISTING STREET LIGHTING WIRES.

△21 MULTIPLE SERVICE LOCATION. INTERCEPT CONDUIT INSTALLED BY OTHERS AND INSTALL TYPE 3 SERVICE PULLBOX. VERIFY EXACT LOCATION OF CONDUIT. PHONE DEPT. OF WATER AND POWER UNDERGROUND ENGINEERING FIVE DAYS PRIOR TO START OF WORK AT THIS LOCATION. (PHONE: 213-367-3003)

△20 CONTRACTOR SHALL REQUEST A PERMIT TO PRUNE TREE FROM THE URBAN FORESTRY DIVISION (213) 847-3077, FIVE DAYS PRIOR TO THE INSTALLATION OF ELECTROLIER. ALL TREE WORK SHALL BE PERFORMED TO TREE CARE PROFESSION BEST MANAGEMENT PRACTICES AND TO THE SATISFACTION OF THE URBAN FORESTRY DIVISION.

△19 INSTALL APPROVED CONNECTING DEVICES PER DETAIL "B", BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1.

△18 INSTALL APPROVED CONNECTING DEVICES PER DETAIL "A", BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1.

△17 MULTIPLE SERVICE LOCATION. INSTALL 10' OF 2" GALVANIZED CONDUIT SERVICE RISER ON POLE. EXTEND CONDUIT TO THE ALLEY B.C. AND INSTALL TYPE 3 PULLBOX UNLESS OTHERWISE SPECIFIED. INSTALL PULLWIRE.

△16 INSTALL FIVE MULTIPLE CIRCUIT WIRES: (COLOR CODE: 2-RED, 2-BLACK, 1-WHITE)

△15 INSTALL TWO MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-BLACK, 1-WHITE)

△14 INSTALL TWO MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-RED, 1-WHITE)

△13 INSTALL 1" CONDUIT BEND.

△12 INSTALL ADDITIONAL 2" CONDUIT BEND FOR TRAFFIC SIGNAL WIRING.

△11 INSTALL ONE APPROVED FUSE HOLDER WITH 30 AMP FUSE BETWEEN EACH SERVICE WIRE (NOT NEUTRAL WIRE) OR SERVICE WIRE CONNECTING DEVICE AND STREET LIGHTING CIRCUIT WIRE. SERVING COMPANY WILL INSTALL SERVICE.

△10 JOIN CONDUIT

△9 MULTIPLE SERVICE LOCATION. INSTALL TYPE 3 PULLBOX UNLESS OTHERWISE SPECIFIED AND 10' OF 2" GALVANIZED CONDUIT SERVICE RISER ON POLE. INSTALL PULLBOX NO CLOSER THAN 5' AND NO FARTHER THAN 15' FROM THE SERVICE POLE.

△8 SERIES SERVICE POLE. INSTALL ONE TERMINAL CUTOFF BOX STANDARD PLAN B-3724 WITH ONE DISCONNECTING SWITCH FOR EACH CIRCUIT. SERVING COMPANY WILL INSTALL SERVICE.

△7 CONSTRUCT CASE 4 DRIVEWAY RETURN PER STANDARD PLAN NO. S-440

△6 CONSTRUCT CASE 3 DRIVEWAY RETURN PER STANDARD PLAN NO. S-440.

△5 INTERCEPT CONDUIT AND INSTALL PULLBOX.

△4 THREAD AND CAP CONDUIT AT END OF IMPROVEMENT.

△3 INSTALL CONDUIT ONLY.

△2 CONNECT WIRES (PER CIRCUIT DIAGRAM WHERE APPLICABLE).

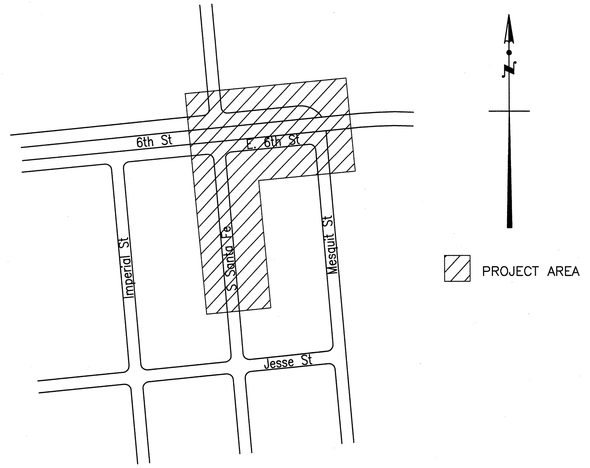
△1 TERMINATE CONDUIT IN STREET LIGHTING PULLBOX.

THE ABOVE NOTES ARE APPLICABLE ONLY WHERE SPECIFIED ON THIS PLAN.

DELTA NOTES

PLAN OF ELECTROLIER LIGHTING SYSTEM

(M)=MAJOR, (S)=SECONDARY, (L)=LOCAL, (C)=COLLECTOR STREET	FROM	TO
E. 6TH ST (C)	SANTA FE AVE (S)	MESQUIT ST (C)



VICINITY MAP

NOT TO SCALE

ALL CONSTRUCTION IS PROHIBITED ON MAJOR AND SECONDARY STREET BETWEEN:
6:00 A.M. TO 9:00 A.M.
3:30 P.M. TO 7:00 P.M.

PROCEDURE FOR STREET LIGHT CIRCUIT CLEARANCE

- HIGH VOLTAGE CIRCUIT CLEARANCE REQUESTS SHALL BE MADE TO THE BUREAU OF STREET LIGHTING AND WILL BE PERFORMED BY CITY CREWS.
- LOW VOLTAGE CIRCUIT CLEARANCE SHALL BE PERFORMED BY THE QUALIFIED CONTRACTOR RESPONSIBLE FOR CONSTRUCTION PROJECTS.
- PRIOR TO CONSTRUCTION, THE CONTRACTOR SHALL SUBMIT TWO (2) COPIES OF THE PLAN (24"X36") AND NOTIFY THE INSPECTOR TO SUBMIT "CONSTRUCTION START NOTICE" AND M-21 FORM TO LADWP STREET LIGHT SUPPORT (111 N. HOPE STREET, RM 910, LOS ANGELES, CA 90012)

FOR DETAILED PROCEDURES, SEE WWW.bsl.lacity.org (CLICK ON THE BUSINESS/CONTRACTORS LINK).

THIS PROJECT IS IMPACTED BY PROPOSITION 218. ASSESSMENT RATES HAVE BEEN VERIFIED FOR THIS PROJECT BY THE PROPOSITION 218 COMPLIANCE SECTION.
APPROVED R.F Flamenco DATE 11/4/14
RUBEN FLAMENCO

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 1

THE STREET LIGHTING EQUIPMENT ON THIS PLAN MAY BE SUBJECT TO CHANGE ("GREEN BOOK" 2006 §307-1.3). THE CONTRACTOR SHALL NOT ORDER ANY NEW STREET LIGHTING EQUIPMENT PRIOR TO APPROVAL BY THE BUREAU OF STREET LIGHTING, EQUIPMENT APPROVAL SECTION (M-40 FORM). CONTACT (213) 847-1831 FOR MORE INFORMATION.

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 2

THIS PROJECT IS IMPACTED BY PROPOSITION 218

ELECTROLIER(S) SPECIFIED HEREON SHALL NOT BE INSTALLED UNTIL THE LEGAL REQUIREMENTS OF PROPOSITION 218 HAVE BEEN SATISFIED. THE CITY INSPECTOR SHALL CONTACT THE BUREAU OF STREET LIGHTING, ENGINEERING AND TECHNICAL SERVICES DIVISION AT (213) 847-1431 FOR CONSTRUCTION CLEARANCE. UNDERGROUND FACILITIES MAY BE INSTALLED PRIOR TO PROPOSITION 218 CONSTRUCTION CLEARANCE.

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 3

THIS PROJECT IS SUBJECT TO "BUY AMERICA" REQUIREMENTS OF TITLE 23 UNITED STATES CODE, SECTION 313. CERTIFICATION OF COMPLIANCE IS REQUIRED TO BE SUBMITTED TO THE PROJECT INSPECTOR. SEE PROJECT SPECIFICATIONS.

ADDENDUM 5

NOTICE TO CONTRACTORS
GENERAL NOTES

1. ALL WORK SHALL CONFORM TO THE LATEST BOARD OF PUBLIC WORKS OF THE CITY OF LOS ANGELES ADOPTED EDITION AND SUPPLEMENTS TO THE "GREENBOOK" STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION" AS MODIFIED BY THE CORRESPONDING ISSUE OF THE BROWN BOOK, THE LATEST EDITION OF THE BUREAU OF STREET LIGHTING "SPECIAL SPECIFICATIONS", AND THE SPECIAL PROVISIONS.
2. ELECTROLIERS SHALL BE INSTALLED WITH CENTERLINE 30" BEHIND THE CURB FACE, AND WITH LUMINAIRE ARM ORIENTED OVER THE STREET AND PERPENDICULAR TO ITS CENTER LINE, EXCEPT AS OTHERWISE SPECIFIED HEREON.
3. ELECTROLIERS SPECIFIED TO BE LOCATED INSIDE OF THE CURB RETURN SHALL BE INSTALLED WITH THE CENTER OF THE ELECTROLIER 30 INCHES BEHIND THE CURB FACE MEASURED RADIALLY, AND WITH THE LUMINAIRE ARM ORIENTED OVER THE STREET AND PERPENDICULAR TO THE STREET CENTERLINE.
4. ELECTROLIERS SHALL BE ERECTED SO THAT THE BASE DOOR IS PERPENDICULAR TO THE CURB AND LOCATED ON THE SIDE OF THE ELECTROLIER AWAY FROM ONCOMING TRAFFIC.
5. ALL EXISTING ELECTROLIERS SPECIFIED TO BE REMOVED OR MODIFIED IN THESE PLANS SHALL BE MAINTAINED IN SERVICE UNTIL THE NEW ELECTROLIER LIGHTING SYSTEM IS PLACED IN SERVICE, UNLESS OTHERWISE SPECIFIED HEREON. ALL OTHER ELECTROLIERS ON CIRCUITS AFFECTED BY THESE PLANS SHALL BE MAINTAINED IN SERVICE. CONTRACTOR MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING ELECTROLIER LIGHTS IN SERVICE PROVIDED THAT SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
6. ALL EQUIPMENT REQUIRED HEREON FOR FURNISHING ELECTRICAL SERVICE FOR EACH CIRCUIT SHALL BE INSTALLED AND INSPECTED PRIOR TO ANY OTHER CONSTRUCTION ON THAT CIRCUIT UNLESS OTHERWISE APPROVED BY THE ENGINEER.
7. THE CONTRACTOR SHALL GIVE WRITTEN NOTICE, 72 HOURS IN ADVANCE OF THE REMOVAL OF AN ELECTROLIER, TO ANY PUBLIC AGENCY MAINTAINING EQUIPMENT SUPPORTED BY THAT ELECTROLIER.
8. FOUNDATIONS AND PULLBOXES NOT REMAINING IN SERVICE SHALL BE REMOVED. THE RESULTING EXCAVATION SHALL BE FILLED WITH MATERIAL SIMILAR TO ADJACENT MATERIAL AND SATISFACTORILY COMPACTED WITH A MECHANICAL COMPACTOR IN LAYERS NOT EXCEEDING 12 INCHES. THE SURFACE SHALL BE FINISHED TO MATCH THE ADJACENT SURFACE.
9. THE CONTRACTOR SHALL REQUEST A BURN TEST BY NOTIFYING THE BUREAU OF CONTRACT ADMINISTRATION PROJECT INSPECTOR A MINIMUM OF 7 CALENDAR DAYS IN ADVANCE OF THE DATE ON WHICH A BURN TEST IS DESIRED.
10. CONTRACTOR SHALL GIVE THREE WORKING DAYS NOTICE (PHONE 323-913-4744) PRIOR TO DELIVERY OF ANY EQUIPMENT SPECIFIED TO BE DELIVERED TO THE BUREAU OF STREET LIGHTING YARD AT 4550 SANTA MONICA BLVD., SUCH DELIVERIES SHALL BE BETWEEN 8:30 AM AND 3:00 PM AND SHALL INCLUDE ALL HANDLING AND LOADING FROM THE TRUCK BY THE CONTRACTOR. CONTRACTOR MUST SUPPLY A COPY OF THE STREET LIGHTING SHEETS WITH THE DELIVERY OF MATERIAL.
11. PULLBOXES LOCATED ADJACENT TO DRIVEWAYS AND ALLEYS SHALL BE INSTALLED AT A MINIMUM DISTANCE OF FIVE FEET FROM THE TOP OF THE "X" OF A CASE 1 OR CASE 2 DRIVEWAY OR AT A MINIMUM DISTANCE OF TWO FEET FROM THE B.C. OF A CASE 3 OR CASE 4 DRIVEWAY OR FIVE FEET FROM TRAVELLED WAY OF THE ALLEY.
12. PULLBOXES INSTALLED AT INTERSECTIONS OF LOCAL STREET SHALL BE INSTALLED NO CLOSER TO THE INTERSECTIONS THAN THE B.C.R. OF AN ASSUMED FUTURE 25' RADIUS CURB RETURN UNLESS OTHERWISE APPROVED BY THE ENGINEER. PULLBOXES INSTALLED AT INTERSECTIONS WHICH INVOLVE ONE OR MORE MAJOR OR SECONDARY STREETS SHALL BE INSTALLED NO CLOSER TO INTERSECTIONS THAN THE B.C.R. OF AN ASSUMED FUTURE 35' RADIUS CURB RETURN UNLESS OTHERWISE APPROVED BY THE ENGINEER.
13. CONDUIT SHALL BE INSTALLED AROUND ALL EXISTING AND/OR PROPOSED CATCH BASINS PER BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-304-0 UNLESS OTHERWISE SPECIFIED.
14. ALL SCREWS PROVIDED FOR ELECTROLIER STANDARD BASE DOORS AND BASE COVERS SHALL BE CADMIUM PLATED STEEL, 1/4-20NC MACHINE SCREWS, WITH PHILLIPS RECESSED ROUND HEADS.
15. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE AFFECTED UTILITY COMPANY BEFORE DOING ANY WORK IN CLOSE PROXIMITY TO ANY OVERHEAD ELECTRIC LINE. SEE SECTIONS 16430 AND 2100 OF SPECIAL SPECIFICATIONS.
16. UNLESS OTHERWISE SPECIFIED HEREON, LUMINAIRES SHALL PROVIDE A MEDIUM, CUTOFF, TYPE III, LIGHTING DISTRIBUTION PATTERN CONFORMING TO I.E.S DESIGNATION.
17. CONTRACTOR SHALL BE RESPONSIBLE FOR PRESERVING THE CONDITION OF ALL EXISTING EQUIPMENT TO BE REUSED, MODIFIED OR RETURNED TO THE BUREAU OF STREET LIGHTING YARD.
18. EQUIPMENT INDICATED "DISPOSE" SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND BE DISPOSED OF BY THE CONTRACTOR.
19. STREET LIGHTING CONDUIT SHALL BE INSTALLED BY JACKING OR DRILLING METHODS. INSTALLATION OF CONDUIT BY OPEN TRENCHING IS NOT PERMITTED UNLESS APPROVED BY THE DIRECTOR, BUREAU OF STREET LIGHTING.
20. CONTRACTOR SHALL REPAIR AT HIS COST, THE DAMAGE CAUSED TO EXISTING SPRINKLER SYSTEMS DURING THE CONSTRUCTION OF THIS PROJECT. REPAIRS SHALL BE MADE WITHIN 5 WORKING DAYS AFTER DAMAGE OCCURS.
21. ALL ELECTROLIERS SPECIFIED HEREON SHALL INCLUDE A TYPE 2 PULLBOX, TO BE SUPPLIED AND INSTALLED, UNLESS OTHERWISE SPECIFIED.
22. CONTRACTOR SHALL BE RESPONSIBLE FOR ALL EXISTING ELECTROLIERS SPECIFIED TO BE RELOCATED AND MODIFIED IN THESE PLANS. PRIOR TO REINSTALLATION, CONTRACTOR SHALL REPAIR OR REPLACE ALL EXISTING STREET LIGHTING FACILITIES FOUND TO BE DAMAGED PRIOR TO START OF OR DURING THE CONSTRUCTION OF THIS PROJECT AT NO COST TO THE CITY.
23. UNLESS NOTED OTHERWISE, INSTALL CONDUIT COMBINATION EXPANSION-DEFLECTION FITTING PER CALTRANS STD. PLAN NO. ES-9B, DETAIL X-Y AT EACH BRIDGE EXPANSION JOINT, HINGE, OR ABUTMENT.

SUPPLEMENTAL NOTES

1. CONTRACTOR SHALL LOCATE & PROTECT SUBSTRUCTURE(S) SHOWN HEREON, & SHALL PROVIDE FOR A MINIMUM 12" HORIZONTAL CLEARANCE BETWEEN FOUNDATION & SUBSTRUCTURES. IN THE EVENT A 12" CLEARANCE CANNOT BE ACHIEVED, THE CONTRACTOR SHALL MAKE ARRANGEMENTS FOR RELOCATION OF SUBSTRUCTURES AT NO COST TO THE CITY.
2. IN THE EVENT OF OVERHEAD LINES CONFLICT WITH ELECTROLIERS THE CONTRACTOR SHALL MAKE NECESSARY ARRANGEMENTS WITH THE DEPT. OF WATER AND POWER TO RAISE THEIR OVERHEAD FACILITIES IN ORDER TO PROVIDE FOR THE FOLLOWING CLEARANCES WITH EXISTING AND/OR PROPOSED ELECTROLIERS.
   LOW VOLTAGE: MINIMUM 3' CLEARANCE BETWEEN OVERHEAD LINES AND ELECTROLIERS
   HIGH VOLTAGE: MINIMUM 6' CLEARANCE BETWEEN OVERHEAD LINES AND ELECTROLIERS
3. STREET TREES SHALL NOT BE PLANTED CLOSER THAN 20' FROM EXISTING OR PROPOSED ELECTROLIER, UNLESS OTHERWISE INDICATED.
4. IN THE EVENT OF OVERHEAD COMMUNICATION LINE CONFLICT WITH ELECTROLIERS, CONTRACTOR SHALL MAKE NECESSARY ARRANGEMENTS TO PROVIDE A MINIMUM 12" CLEARANCE.
5. PROPOSED ELECTROLIER FOUNDATIONS AND PULLBOXES SHALL BE INSTALLED OUTSIDE OF ACCESS RAMP AREAS. EXISTING FOUNDATIONS AND PULLBOXES SHALL BE RECONSTRUCTED TO CLEAR ACCESS RAMPS BY A MINIMUM OF 12". EXISTING CONDUIT SHALL BE LOWERED AS NECESSARY PER SEC. 307-2.5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
6. CONDUIT THAT IS TO BE ABANDONED SHALL HAVE WIRES REMOVED. THE CONDUIT SHALL BE REMOVED TO A DEPTH OF AT LEAST 12" BELOW THE SURFACE AND HAVE BOTH ENDS CRIMPED.
7. NOTWITHSTANDING SECTION 18950.2 OF THE SPECIAL SPECIFICATIONS FOR THE CONSTRUCTION STREET LIGHTING SYSTEMS MAGNETIC REGULATING BALLASTS ARE REQUIRED IN ALL COBRA-HEAD LUMINAIRES.
8. ALL #10 AWG WIRES USED FOR MULTIPLE CIRCUIT ELECTROLIER WIRING REFERENCED IN STANDARD DRAWING NO. L-301-1 SHALL BE #10 AWG SOLID COPPER CONDUCTORS.
9. AT LEAST TWO (2) WORKING DAYS PRIOR TO STARTING ANY EXCAVATION. THE CONTRACTOR MUST OBTAIN AN INQUIRY I.D. NUMBER FROM UNDERGROUND SERVICE ALERT BY CALLING (800) 422-4133 OR BY DIALING 811.

SERIES CIRCUIT NOTES

1. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE SERVING COMPANY, AND "MEN AT WORK" SIGNS SHALL BE POSTED AT THE SERVICE POINT BEFORE ANY WORK IS DONE OR ANY CONNECTIONS MADE ON AN EXISTING CIRCUIT. SEE SECTIONS 16430 AND 2100 OF SPECIAL SPECIFICATIONS.
2. SERIES CIRCUIT WIRE SHALL BE NO. 8 AWG STRANDED COPPER CONDUCTOR, INSULATED WITH 0.110" APPROVED POLYETHYLENE COMPOUND RATED FOR 5,000 VOLT OPERATION.
3. TWO OR MORE TURNS OF SELF-ADHESIVE COLORED TAPE WITH A MINIMUM WIDTH OF 1/2 INCH SHALL BE APPLIED TO EACH CABLE IN ALL SERIES CIRCUITS WHERE WORK IS BEING DONE AND WHERE TWO OR MORE CIRCUITS EXIST IN A COMMON PULLBOX OR POST BASE. THE TAPE SHALL BE APPLIED ON THE CABLE BETWEEN THE SPLICES AND THE CONDUIT, USING ONE COLOR FOR EACH CIRCUIT. THE COLORS WHITE, GRAY, GREEN, AND ORANGE SHALL NOT BE USED.
4. CONTRACTOR SHALL GIVE THE BUREAU OF STREET LIGHTING YARD (PHONE 323-913-4744) TWO WORKING DAYS NOTICE BEFORE ANY WORK IS DONE ON AN EXISTING SERIES CIRCUIT.

MULTIPLE CIRCUIT NOTES

1. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE SERVING COMPANY BEFORE DOING ANY WORK OR MAKING ANY CONNECTIONS ON AN EXISTING CIRCUIT. SEE SECTIONS 16430 AND 2100 OF SPECIAL SPECIFICATIONS.
2. MULTIPLE CIRCUIT WIRE SHALL BE NO. 8 AWG STRANDED COPPER CONDUCTOR. TYPE THWN/THHN INSULATION, UL APPROVED FOR 600 VOLT OPERATION UNLESS OTHERWISE SPECIFIED HEREON.
3. THREE WIRES (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE,) SHALL BE INSTALLED IN ALL MULTIPLE CIRCUIT CONDUIT UNLESS OTHERWISE PROVIDED FOR HEREON.
4. EVEN NUMBERED ELECTROLIERS SHALL BE CONNECTED TO RED AND WHITE WIRES AND ODD NUMBERED ELECTROLIERS SHALL BE CONNECTED TO BLACK AND WHITE WIRES.
5. ELECTROLIERS SHALL BE WIRED PER TYPICAL MULTIPLE CIRCUIT ELECTROLIER WIRING DETAIL, BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1, UNLESS OTHERWISE SPECIFIED.
6. MULTIPLE CIRCUITS IN CONDUITS CONTAINING MORE THAN THREE CONDUCTORS SHALL BE APPROPRIATELY IDENTIFIED BY LABELING CONDUCTORS "A", "B", ETC. WITH APPROVED SELF-LAMINATING LETTER TAPE WRAPPED AT LEAST TWICE AROUND THE CONDUCTOR IN EACH PULLBOX. (W.H. BRADY, SPECIAL SELF-LAMINATING WIRE MARKERS OR EQUIVALENT)

LEGEND

- EXISTING ELECTROLIER TO BE RELOCATED
- EXISTING UTILITARIAN LIGHTS ON WOODEN POLES WHICH SHALL BE MAINTAINED IN SERVICE UNTIL THE PERMANENT ELECTROLIER LIGHTING SYSTEM IS PLACED IN SERVICE. CONTRACTOR MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING UTILITARIAN LIGHTS IN SERVICE PROVIDED THAT SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
- EXISTING ELECTROLIER TO BE REMOVED. (SEE GENERAL NOTE 8)
- NEW ELECTROLIER
- EXISTING ELECTROLIER, NOT TO BE REMOVED OR MODIFIED
- PULLBOX TYPE 2 UNLESS OTHERWISE SHOWN HEREON. (SEE DELTA NOTE NO. 25). ADDITIONAL PULLBOXES SHALL BE REQUIRED AS SPECIFIED.

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 1

THE STREET LIGHTING EQUIPMENT ON THIS PLAN MAY BE SUBJECT TO CHANGE ("GREEN BOOK" 2006 §307-1.3). THE CONTRACTOR SHALL NOT ORDER ANY NEW STREET LIGHTING EQUIPMENT PRIOR TO APPROVAL BY THE BUREAU OF STREET LIGHTING, EQUIPMENT APPROVAL SECTION (M-40 FORM). CONTACT (213) 847-1831 FOR MORE INFORMATION.

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 2

THIS PROJECT IS IMPACTED BY PROPOSITION 218

ELECTROLIER(S) SPECIFIED HEREON SHALL NOT BE INSTALLED UNTIL THE LEGAL REQUIREMENTS OF PROPOSITION 218 HAVE BEEN SATISFIED. THE CITY INSPECTOR SHALL CONTACT THE BUREAU OF STREET LIGHTING, ENGINEERING AND TECHNICAL SERVICES DIVISION AT (213) 847-1431 FOR CONSTRUCTION CLEARANCE. UNDERGROUND FACILITIES MAY BE INSTALLED PRIOR TO PROPOSITION 218 CONSTRUCTION CLEARANCE.

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 3

THIS PROJECT IS SUBJECT TO "BUY AMERICA" REQUIREMENTS OF TITLE 23 UNITED STATES CODE, SECTION 313, AND THE REGULATIONS ADOPTED PURSUANT THERETO. CERTIFICATION OF COMPLIANCE IS REQUIRED TO BE SUBMITTED TO THE PROJECT INSPECTOR. SEE PROJECT SPECIFICATIONS.

PROCEDURE FOR STREET LIGHT CIRCUIT CLEARANCE

- HIGH VOLTAGE CIRCUIT CLEARANCE REQUESTS SHALL BE MADE TO THE BUREAU OF STREET LIGHTING AND WILL BE PERFORMED BY CITY CREWS.
- LOW VOLTAGE CIRCUIT CLEARANCE SHALL BE PERFORMED BY THE QUALIFIED CONTRACTOR RESPONSIBLE FOR CONSTRUCTION PROJECTS.
- PRIOR TO CONSTRUCTION, THE CONTRACTOR SHALL SUBMIT TWO (2) COPIES OF THE PLAN (24"X36") AND NOTIFY THE INSPECTOR TO SUBMIT "CONSTRUCTION START NOTICE" AND M-21 FORM TO LADWP STREET LIGHT SUPPORT (111 N. HOPE STREET, RM 910, LOS ANGELES, CA 90012)

FOR DETAILED PROCEDURES, SEE WWW.bsl.lacity.org (CLICK ON THE BUSINESS/CONTRACTORS LINK).

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 4

CONTRACTOR SHALL NOTIFY THE STREET LIGHTING ENGINEER (TELEPHONE:213-847-1459) A MINIMUM OF SEVEN (7) WORKING DAYS PRIOR TO WORKING ON ANY ELECTROLIER, WITH EXISTING TELECOMMUNICATION EQUIPMENT, WHICH REQUIRES REMOVAL AND/OR RELOCATION.

(38) INSTALL TYPE 80 BARRIER MODIFICATION FOR ELECTROLIER PER CALTRANS STANDARD PLAN B11-61. SEE DRAWING SL-405 DETAIL 2. LOCATION SHOWN ON PLANS MAY BE ADJUSTED SLIGHTLY IN ORDER TO ALIGN WITH NEAREST TYPE 80 BARRIER POST LOCATION.
(55) INSTALL APPROVED CONNECTING DEVICES PER DETAIL 4, DRAWING NO. SL-304.
(54) INSTALL ELEVEN MULTIPLE CIRCUIT WIRES: (COLOR CODE: 5-RED, 5-BLACK, 1-WHITE)
(53) SEE DRAWING SL-405 FOR CONDUIT INSTALLATION IN VIADUCT COLUMNS, AND DRAWING SL-408 FOR CONDUIT INSTALLATION IN VIADUCT FOUNDATIONS.
(52) INSTALL SEVEN MULTIPLE CIRCUIT WIRES: (COLOR CODE: 3-RED, 3-BLACK, 1-WHITE)
(51) INSTALL LUMINAIRE WITH SHORTING CAP.
(50) INSTALL NINE MULTIPLE CIRCUIT WIRES: (COLOR CODE: 4-RED, 4-BLACK, 1-WHITE)
(29) THE CONTRACTOR SHALL INSTALL PHILIPS CITY TOUCH OUTDOOR LUMINAIRE CONTROLLER LLC7260 ON ALL LOW VOLTAGE, MULTIPLE CIRCUITS LUMINAIRES. THE UNIT SHOULD BE PICKED UP AT THE BUREAU'S PLAN COUNTER AT 1149 S. BROADWAY STE. 200, LOS ANGELES, CA 90015. THE UNITS WILL BE PROVIDED FOR A NON-REFUNDABLE FEE (APPROXIMATELY $155 PER UNIT). THE CONTRACTOR SHALL GIVE SEVEN WORKING DAYS NOTICE (PHONE 213-847-1492) PRIOR TO PICKING UP THE REMOTE MONITORING UNITS. NODES SHALL BE INSTALLED INTO PHOTOELECTRIC CONTROL STANDARD SOCKET PER ANSI/NEMA C-136.10 AND SHALL BE ORIENTED IN A NORTHERLY DIRECTION. A SEPARATE P.E. CELL IS NOT NEEDED FOR LUMINAIRES EQUIPPED WITH A REMOTE MONITORING NODE.
(28) INSTALL TYPE 3 PULLBOX. ALL TYPE 3 PULLBOXES SHALL BE OF "COMPOSITE/POLYMER" MATERIAL W/BOLT-DOWN LID AND SHALL COMPLY WITH STANDARD PLAN "COMPOSITE TYPE 3, REV A" AND APPROVED BY BUREAU OF STREETLIGHTING.
(27) CONTRACTOR SHALL LOCATE AND PROTECT STREET LIGHTING PULLBOX PRIOR TO TERMINATING NEW CONDUIT TO PULLBOX. IN THE EVENT THE PULLBOX DOES NOT EXIST OR IS MISSING, THE CONTRACTOR SHALL CONTACT THE PRIVATE ENGINEER (ENGINEER ON RECORD) AND BUREAU OF STREET LIGHTING TO OBTAIN AN APPROVAL FOR THE INSTALLATION OF NEW PULLBOX AT NO COST TO THE CITY.
(26) INSTALL FUSE HOLDER(S), FUSE(S) AND CONNECT WIRES INSIDE TYPE 2 PULLBOX.
(25) INSTALL TYPE 2 PULLBOX. ALL PULLBOXES SPECIFIED SHALL BE OF "COMPOSITE/POLYMER" MATERIAL WITH BOLT-DOWN LID AND SHALL COMPLY WITH STANDARD PLAN "COMPOSITE TYPE 2, REV B" AND APPROVED BY BUREAU OF STREETLIGHTING.
(24) TAPE ENDS OF SPARE WIRE.
(23) INSTALL THREE MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE)
(22) REMOVE EXISTING STREET LIGHTING WIRES.
(21) MULTIPLE SERVICE LOCATION. INTERCEPT CONDUIT INSTALLED BY OTHERS AND INSTALL TYPE 3 SERVICE PULLBOX. VERIFY EXACT LOCATION OF CONDUIT. PHONE DEPT. OF WATER AND POWER UNDERGROUND ENGINEERING FIVE DAYS PRIOR TO START OF WORK AT THIS LOCATION. (PHONE: 213-367-3003)
(20) CONTRACTOR SHALL REQUEST A PERMIT TO PRUNE TREE FROM THE URBAN FORESTRY DIVISION (213) 847-3077, FIVE DAYS PRIOR TO THE INSTALLATION OF ELECTROLIER. ALL TREE WORK SHALL BE PERFORMED TO TREE CARE PROFESSION BEST MANAGEMENT PRACTICES AND TO THE SATISFACTION OF THE URBAN FORESTRY DIVISION.
(19) INSTALL APPROVED CONNECTING DEVICES PER DETAIL "B", BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1.
(18) INSTALL APPROVED CONNECTING DEVICES PER DETAIL "A", BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1.
(17) MULTIPLE SERVICE LOCATION. INSTALL 10' OF 2" GALVANIZED CONDUIT SERVICE RISER ON POLE. EXTEND CONDUIT TO THE ALLEY B.C. AND INSTALL TYPE 3 PULLBOX UNLESS OTHERWISE SPECIFIED. INSTALL PULLWIRE.
(16) INSTALL FIVE MULTIPLE CIRCUIT WIRES: (COLOR CODE: 2-RED, 2-BLACK, 1-WHITE)
(15) INSTALL TWO MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-BLACK, 1-WHITE)
(14) INSTALL TWO MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-RED, 1-WHITE)
(13) INSTALL 1" CONDUIT BEND.
(12) INSTALL ADDITIONAL 2" CONDUIT BEND FOR TRAFFIC SIGNAL WIRING.
(11) INSTALL ONE APPROVED FUSE HOLDER WITH 30 AMP FUSE BETWEEN EACH SERVICE WIRE (NOT NEUTRAL WIRE) OF SERVICE WIRE CONNECTING DEVICE AND STREET LIGHTING CIRCUIT WIRE. SERVING COMPANY WILL INSTALL SERVICE.
(10) JOIN CONDUIT
(9) MULTIPLE SERVICE LOCATION. INSTALL TYPE 3 PULLBOX UNLESS OTHERWISE SPECIFIED AND 10' OF 2" GALVANIZED CONDUIT SERVICE RISER ON POLE. INSTALL PULLBOX NO CLOSER THAN 5' AND NO FARTHER THAN 15' FROM THE SERVICE POLE.
(8) SERIES SERVICE POLE. INSTALL ONE TERMINAL CUTOFF BOX STANDARD PLAN B-3724 WITH ONE DISCONNECTING SWITCH FOR EACH CIRCUIT. SERVING COMPANY WILL INSTALL SERVICE.
(7) CONSTRUCT CASE 4 DRIVEWAY RETURN PER STANDARD PLAN NO. S-440
(6) CONSTRUCT CASE 3 DRIVEWAY RETURN PER STANDARD PLAN NO. S-440.
(5) INTERCEPT CONDUIT AND INSTALL PULLBOX.
(4) THREAD AND CAP CONDUIT AT END OF IMPROVEMENT.
(3) INSTALL CONDUIT ONLY.
(2) CONNECT WIRES (PER CIRCUIT DIAGRAM WHERE APPLICABLE).
(1) TERMINATE CONDUIT IN STREET LIGHTING PULLBOX.

(53) "OR EQUAL" IS DEFINED AS EQUIPMENT OTHER THAN WHAT IS NOTED HERE, BUT MUST BE ON THE BUREAU OF STREET LIGHTING'S (BSL) APPROVED EQUIPMENT LIST WHICH WAS IN EFFECT ON THE DATE THE CONSTRUCTION CONTRACT WAS AWARDED OR HAVE A LETTER OF APPROVAL FROM THE BSL DATED ON OR BEFORE THE DATE THE CONSTRUCTION CONTRACT WAS AWARDED.
(52) INSTALL TRAFFIC RATED PULLBOX TYPE 3.
(51) INSTALL APPROVED CONNECTING DEVICES PER DETAIL 3, DRAWING NO. SL-304.
(50) INTERCEPT POWER CIRCUITS AND INSTALL TIMECLOCK AND RELAY PER DETAIL 1 & 4, DRAWING NO. SL-305. DOWNSTREAM LIGHTING LOADS WILL BE CONTROLLED BY THE TIMECLOCK CONTROLLER.
(49) FOR ELECTROLIER FOUNDATION INSTALLATION AT THE WEST ABUTMENT, SEE DRAWING SL-408.
(48) CONTRACTOR SHALL DELIVER THE FOLLOWING SPARES AND EQUIPMENT TO BSL YARD AS SHOWN IN MATERIAL LIST.
(47) PROVIDE CAP ON LUMINAIRE LENS COVER SCREWS SUCH THAT THEY CANNOT BE REMOVED OR ADJUSTED WITH TOOLS THROUGH THE BARRIER LIGHTING ENCLOSURE BAFFLE OPENING. LENS COVER SCREWS MUST BE SUBMITTED TO BSL AND APPROVED PRIOR TO INSTALLATION.
(46) CONTRACTOR SHALL SUBMIT A PROTOTYPE, SHOP DRAWINGS, AND METHOD OF ATTACHMENT AND WINDLOAD (100MPH)/SEISMIC (WHICHEVER IS DOMINANT) CALCULATIONS BASED ON THE MOST CURRENT AASHTO SPECIFICATIONS, STAMPED AND SIGNED BY A LICENSED STRUCTURAL OR CIVIL ENGINEER REGISTERED IN THE STATE OF CALIFORNIA TO THE TESTING AND EQUIPMENT EVALUATION SECTION (TEE, NO. 213-847-1831) FOR REVIEW AND APPROVAL. THE CONTRACTOR WILL BE NOTIFIED OF REQUIRED CHANGES, IF ANY, WITHIN 30 DAYS AFTER SHOP DRAWINGS/CALCULATIONS ARE RECEIVED. WRITTEN APPROVAL FROM THE BUREAU ON THE SHOP DRAWINGS IS REQUIRED PRIOR TO FABRICATION OF EQUIPMENT.
(45) ALL LUMINAIRES, AND LUMINAIRE CAPITALS SHALL BE PRIMED AND PAINTED IN ACCORDANCE WITH SECTION 310-5.1 OF THE STANDARDS SPECIFICATION FOR PUBLIC WORKS CONSTRUCTION, 1997 EDITION, AND THE FOLLOWING SPECIFICATIONS:
   - PRIMER : ONE COAT OF AMERLOCK 400, 5 MILS MINIMUM DRY FILM THICKNESS OR BSL APPROVED EQUAL.
   - FINISH COAT: ONE COAT "PLATINUM GREY" (RAL 7036) OR BSL APPROVED EQUAL, 5 MILS MINIMUM DRY FILM THICKNESS.
   THE CONTRACTOR SHALL SUBMIT THREE COLOR SAMPLES ON 3"x5" (MIN.) METAL SHEET TO THE BSL TESTING AND EQUIPMENT (TEE) SECTION FOR APPROVAL. ALLOW 30 DAYS FOR REVIEW. WRITTEN APPROVAL FROM THE BUREAU OF STREET LIGHTING IS REQUIRED PRIOR TO APPLICATION. CONTACT 1-213-847-1831 FOR DETAILS.
(44) UNLESS CALLED OUT BY STANDARD PLAN NO., ELECTROLIER CATALOG NUMBERS ARE AS FOLLOWS OR BSL APPROVED EQUAL:
   16' OVERALL HEIGHT OF 8' STEEL POLE UPS100S-8 AND BRACKET UBS100-1A
   20' OVERALL HEIGHT OF 12' STEEL POLE UPS100S-12 AND BRACKET UBS100-1A
   30' OVERALL HEIGHT OF 22' STEEL POLE UPM100-22 AND BRACKET UBM100-1A
(43) THE LUMINAIRE CATALOG NUMBERS ARE AS FOLLOWS OR BSL APPROVED EQUAL:
   20W LED LINEAR (PHILIPS EW GRAZE) CAT. # 523-000081-25 (SEE SL-400 THRU SL-404 FOR INSTALLATION)
   * FIXTURE SHALL BE PROVIDED FROM PHILIPS WITH DIRECT CONDUIT CONNECTION POINT AND A 3' LONG #10 AWG COPPER PIGTAI

ADDENDUM 5

SECTION A-A

DETAIL NOTES:

1. PROVIDE J-BOXES AND CONDUIT AS REQUIRED FOR THE SYSTEMS BEING SERVED. NOT ALL J-BOXES AND CONDUIT ARE REQUIRED AT ALL COLUMN LOCATIONS. SEE STREET LIGHTING PLANS FOR CLARIFICATION. ARCH LIGHTING J-BOXES AND CONDUIT ARE SHOWN ON THE ARCH LIGHTING PLANS.
2. RGS CONDUIT BENDS SHALL BE PER GREENBOOK 307-12.2 (NOT LESS THAN 6X INTERNAL DIAMETER OF CONDUIT).

SCALE□□□" □ 1=0"

SHEET NOTES:

1. SEE DRAWINGS SL-405 (STREET LIGHTING PLANS) AND SL-1402 (ARCH LIGHTING PLANS) FOR ELECTRICAL INSTALLATION DETAILS ABOVE FOUNDATION.
2. ALL PULLBOXES SHALL BE LA BSL TYPE 2. PULLBOX LIDS SHALL BE LABELED ACCORDING TO THE SYSTEM THEY SERVE AND THE VOLTAGE WITHIN (I.E. "STREET LIGHTING 120/240V" OR "ARCH LIGHTING 480/277V"). EXACT PULLBOX LOCATIONS MAY BE ADJUSTED ACCORDING TO AVAILABLE SPACE NEAR THE VIADUCT FOUNDATION.
3. COORDINATE CONDUIT INSTALLATION WITH DRAINAGE FUNNELS AND PIPES.
4. EXACT DIMENSIONS AND CONFIGURATION OF FOUNDATION VARIES. COORDINATE ALL ELECTRICAL WORK WITH STRUCTURAL PLANS.
5. CONDUIT WILL BE UTILIZED AS THE GROUND PATH. ALL CONDUIT SHALL BE RGS AND PROPERLY BONDED ACROSS ALL CONNECTING PARTS SUCH THAT IT IS ELECTRICALLY CONTINUOUS.
6. PROVIDE BACK-TO-BACK 1-1/4" x 3/4" UNISTRUT WITH CONDUIT CLAMPS. HORIZONTAL LOCATION MAY BE ADJUSTED AS NEEDED TO SUPPORT CONDUIT. SUPPORTS SHALL BE INSTALLED EVERY 5' MAX. FOR VERTICAL CONDUIT INSTALLATIONS.
7. FOR CONTINUATION OF CONDUIT SEE STREET LIGHTING PLANS AND ARCH LIGHTING PLANS. IN LOCATIONS WHERE SPARE PULLBOXES ARE INSTALLED THERE IS NO CONDUIT CONTINUATION.
8. THE CONDUIT AND PULLBOX LAYOUT SHOWN IS TYPICAL FOR ALL FOUNDATIONS INDICATED. AT SOME LOCATIONS THE CONDUIT AND PULLBOXES ARE NOT UTILIZED AND SHALL BE INSTALLED AS SPARES. SEE STREET LIGHTING PLANS AND ARCH LIGHTING PLANS FOR PULLBOX AND CONDUIT UTILIZATION.

THE CITY OF LOS ANGELES OR ITS OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF ELECTRONIC COPIES OF THIS PLAN SHEET.

C:\oddlib\pw\pwwestcoast\rgreenlee\dms257861\SL-2001.dwg Sep 13, 2016 - 11:00am

NOTICE TO CONTRACTORS GENERAL NOTES

1. ALL WORK SHALL CONFORM TO THE LATEST BOARD OF PUBLIC WORKS OF THE CITY OF LOS ANGELES ADOPTED EDITION AND SUPPLEMENTS TO THE "GREENBOOK STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION" AS MODIFIED BY THE CORRESPONDING ISSUE OF THE BROWN BOOK, THE LATEST EDITION OF THE BUREAU OF STREET LIGHTING "SPECIAL SPECIFICATIONS", AND THE SPECIAL PROVISIONS.
2. ELECTROLIERS SHALL BE INSTALLED WITH CENTERLINE 30" BEHIND THE CURB FACE, AND WITH LUMINAIRE ARM ORIENTED OVER THE STREET AND PERPENDICULAR TO ITS CENTER LINE, EXCEPT AS OTHERWISE SPECIFIED HEREON.
3. ELECTROLIERS SPECIFIED TO BE LOCATED INSIDE OF THE CURB RETURN SHALL BE INSTALLED WITH THE CENTER OF THE ELECTROLIER 30 INCHES BEHIND THE CURB FACE MEASURED RADIALLY, AND WITH THE LUMINAIRE ARM ORIENTED OVER THE STREET AND PERPENDICULAR TO THE STREET CENTERLINE.
4. ELECTROLIERS SHALL BE ERECTED SO THAT THE BASE DOOR IS PERPENDICULAR TO THE CURB AND LOCATED ON THE SIDE OF THE ELECTROLIER AWAY FROM ONCOMING TRAFFIC.
5. ALL EXISTING ELECTROLIERS SPECIFIED TO BE REMOVED OR MODIFIED ON THIS PLAN SHALL BE MAINTAINED IN SERVICE UNTIL THE NEW ELECTROLIER LIGHTING SYSTEM IS PLACED IN SERVICE, UNLESS OTHERWISE SPECIFIED HEREON. ALL OTHER ELECTROLIERS ON CIRCUITS AFFECTED BY THIS PLAN SHALL BE MAINTAINED IN SERVICE. CONTRACTOR MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING ELECTROLIER LIGHTS IN SERVICE PROVIDED THAT SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
6. ALL EQUIPMENT REQUIRED HEREON FOR FURNISHING ELECTRICAL SERVICE FOR EACH CIRCUIT SHALL BE INSTALLED AND INSPECTED PRIOR TO ANY OTHER CONSTRUCTION ON THAT CIRCUIT UNLESS OTHERWISE APPROVED BY THE ENGINEER.
7. THE CONTRACTOR SHALL GIVE WRITTEN NOTICE, 72 HOURS IN ADVANCE OF THE REMOVAL OF AN ELECTROLIER, TO ANY PUBLIC AGENCY MAINTAINING EQUIPMENT SUPPORTED BY THAT ELECTROLIER.
8. FOUNDATIONS AND PULLBOXES NOT REMAINING IN SERVICE SHALL BE REMOVED. THE RESULTING EXCAVATION SHALL BE FILLED WITH MATERIAL SIMILAR TO ADJACENT MATERIAL AND SATISFACTORILY COMPACTED WITH A MECHANICAL COMPACTOR IN LAYERS NOT EXCEEDING 12 INCHES. THE SURFACE SHALL BE FINISHED TO MATCH THE ADJACENT SURFACE.
9. THE CONTRACTOR SHALL REQUEST A BURN TEST BY NOTIFYING THE BUREAU OF CONTRACT ADMINISTRATION PROJECT INSPECTOR A MINIMUM OF 7 CALENDAR DAYS IN ADVANCE OF THE DATE ON WHICH A BURN TEST IS DESIRED.
10. CONTRACTOR SHALL GIVE THREE WORKING DAYS NOTICE (PHONE 323-913-4743) PRIOR TO DELIVERY OF ANY EQUIPMENT SPECIFIED TO BE DELIVERED TO THE BUREAU OF STREET LIGHTING YARD AT 4550 SANTA MONICA BLVD. SUCH DELIVERIES SHALL BE BETWEEN 8:30 AM AND 3:00 PM AND SHALL INCLUDE ALL HANDLING AND LOADING FROM THE TRUCK BY THE CONTRACTOR. CONTRACTOR MUST SUPPLY A COPY OF THE STREET LIGHTING DRAWINGS WITH THE DELIVERY OF MATERIAL.
11. PULLBOXES LOCATED ADJACENT TO DRIVEWAYS AND ALLEYS SHALL BE INSTALLED AT A MINIMUM DISTANCE OF FIVE FEET FROM THE TOP OF THE "X" OF A CASE 1 OR CASE 2 DRIVEWAY OR AT A MINIMUM DISTANCE OF TWO FEET FROM THE B.C. OF A CASE 3 OR CASE 4 DRIVEWAY OR FIVE FEET FROM TRAVELLED WAY OF THE ALLEY.
12. PULLBOXES INSTALLED AT INTERSECTIONS OF LOCAL STREET SHALL BE INSTALLED NO CLOSER TO THE INTERSECTIONS THAN THE B.C.R. OF AN ASSUMED FUTURE 25' RADIUS CURB RETURN UNLESS OTHERWISE APPROVED BY THE ENGINEER. PULLBOXES INSTALLED AT INTERSECTIONS WHICH INVOLVE ONE OR MORE MAJOR OR SECONDARY STREETS SHALL BE INSTALLED NO CLOSER TO INTERSECTIONS THAN THE B.C.R. OF AN ASSUMED FUTURE 35' RADIUS CURB RETURN UNLESS OTHERWISE APPROVED BY THE ENGINEER.
13. CONDUIT SHALL BE INSTALLED AROUND ALL EXISTING AND/OR PROPOSED CATCH BASINS PER BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-304-0 UNLESS OTHERWISE SPECIFIED.
14. ALL SCREWS PROVIDED FOR ELECTROLIER STANDARD BASE DOORS AND BASE COVERS SHALL BE CADMIUM PLATED STEEL, 1/4-20NC MACHINE SCREWS, WITH PHILLIPS RECESSED ROUND HEADS.
15. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE AFFECTED UTILITY COMPANY BEFORE DOING ANY WORK IN CLOSE PROXIMITY TO ANY OVERHEAD ELECTRIC LINE. SEE SECTIONS 16430 AND 2100 OF SPECIAL SPECIFICATIONS.
16. UNLESS OTHERWISE SPECIFIED HEREON, LUMINAIRES SHALL PROVIDE A MEDIUM, CUTOFF, TYPE III, LIGHTING DISTRIBUTION PATTERN CONFORMING TO I.E.S DESIGNATION.
17. CONTRACTOR SHALL BE RESPONSIBLE FOR PRESERVING THE CONDITION OF ALL EXISTING EQUIPMENT TO BE REUSED, MODIFIED OR RETURNED TO THE BUREAU OF STREET LIGHTING YARD.
18. EQUIPMENT INDICATED "DISPOSE" SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND BE DISPOSED OF BY THE CONTRACTOR.
19. STREET LIGHTING CONDUIT SHALL BE INSTALLED BY JACKING OR DRILLING METHODS. INSTALLATION OF CONDUIT BY OPEN TRENCHING IS NOT PERMITTED UNLESS APPROVED BY THE DIRECTOR, BUREAU OF STREET LIGHTING.
20. CONTRACTOR SHALL REPAIR AT HIS COST, THE DAMAGE CAUSED TO EXISTING SPRINKLER SYSTEMS DURING THE CONSTRUCTION OF THIS PROJECT. REPAIRS SHALL BE MADE WITHIN 5 WORKING DAYS AFTER DAMAGE OCCURS.
21. ALL ELECTROLIERS SPECIFIED HEREON SHALL INCLUDE A TYPE 2 PULLBOX, TO BE SUPPLIED AND INSTALLED, UNLESS OTHERWISE SPECIFIED.
22. CONTRACTOR SHALL BE RESPONSIBLE TO ALL EXISTING ELECTROLIERS SPECIFIED TO BE RELOCATED AND MODIFIED ON THIS PLAN. PRIOR TO REINSTALLATION, CONTRACTOR SHALL REPAIR OR REPLACE ALL EXISTING STREET LIGHTING FACILITIES FOUND TO BE DAMAGED PRIOR TO START OF OR DURING THE CONSTRUCTION OF THIS PROJECT AT NO COST TO THE CITY.

SUPPLEMENTAL NOTES

1. CONTRACTOR SHALL LOCATE & PROTECT SUBSTRUCTURE(S) SHOWN HEREON, & SHALL PROVIDE FOR A MINIMUM 12" HORIZONTAL CLEARANCE BETWEEN FOUNDATION & SUBSTRUCTURES. IN THE EVENT A 12" CLEARANCE CANNOT BE ACHIEVED, THE CONTRACTOR SHALL MAKE ARRANGEMENTS FOR RELOCATION OF SUBSTRUCTURES AT NO COST TO THE CITY.
2. IN THE EVENT OF OVERHEAD LINES CONFLICT WITH ELECTROLIERS THE CONTRACTOR SHALL MAKE NECESSARY ARRANGEMENTS WITH THE DEPT. OF WATER AND POWER TO RAISE THEIR OVERHEAD FACILITIES IN ORDER TO PROVIDE FOR THE FOLLOWING CLEARANCES WITH EXISTING AND/OR PROPOSED ELECTROLIERS.
   LOW VOLTAGE: MINIMUM 3' CLEARANCE BETWEEN OVERHEAD LINES AND ELECTROLIERS
   HIGH VOLTAGE: MINIMUM 6' CLEARANCE BETWEEN OVERHEAD LINES AND ELECTROLIERS
3. STREET TREES SHALL NOT BE PLANTED CLOSER THAN 20' FROM EXISTING OR PROPOSED ELECTROLIER, UNLESS OTHERWISE INDICATED.
4. IN THE EVENT OF OVERHEAD COMMUNICATION LINE CONFLICT WITH ELECTROLIERS, CONTRACTOR SHALL MAKE NECESSARY ARRANGEMENTS TO PROVIDE A MINIMUM 12" CLEARANCE.
5. PROPOSED ELECTROLIER FOUNDATIONS AND PULLBOXES SHALL BE INSTALLED OUTSIDE OF ACCESS RAMP AREAS. EXISTING FOUNDATIONS AND PULLBOXES SHALL BE RECONSTRUCTED TO CLEAR ACCESS RAMPS BY A MINIMUM OF 12". EXISTING CONDUIT SHALL BE LOWERED AS NECESSARY PER SEC. 307-2.5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
6. CONDUIT THAT IS TO BE ABANDONED SHALL HAVE WIRES REMOVED. THE CONDUIT SHALL BE REMOVED TO A DEPTH OF AT LEAST 12" BELOW THE SURFACE AND HAVE BOTH ENDS CRIMPED.
7. NOTWITHSTANDING SECTION 16950.2 OF THE SPECIAL SPECIFICATIONS FOR THE CONSTRUCTION STREET LIGHTING SYSTEMS MAGNETIC REGULATING BALLASTS ARE REQUIRED IN ALL COBRA-HEAD LUMINAIRES.
8. ALL #10 AWG WIRES USED FOR MULTIPLE CIRCUIT ELECTROLIER WIRING REFERENCED IN STANDARD DRAWING NO. L-301-1 SHALL BE #10 AWG SOLID COPPER CONDUCTORS.
9. AT LEAST TWO (2) WORKING DAYS PRIOR TO STARTING ANY EXCAVATION. THE CONTRACTOR MUST OBTAIN AN INQUIRY I.D. NUMBER FROM UNDERGROUND SERVICE ALERT BY CALLING (800) 422-4133 OR BY DIALING 811.

SERIES CIRCUIT NOTES

1. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE SERVING COMPANY, AND "MEN AT WORK" SIGNS SHALL BE POSTED AT THE SERVICE POINT BEFORE ANY WORK IS DONE OR ANY CONNECTIONS MADE ON AN EXISTING CIRCUIT. SEE SECTIONS 16430 AND 2100 OF SPECIAL SPECIFICATIONS.
2. SERIES CIRCUIT WIRE SHALL BE NO. 8 AWG STRANDED COPPER CONDUCTOR, INSULATED WITH 0.110" APPROVED POLYETHYLENE COMPOUND RATED FOR 5,000 VOLT OPERATION.
3. TWO OR MORE TURNS OF SELF-ADHESIVE COLORED TAPE WITH A MINIMUM WIDTH OF 1/2 INCH SHALL BE APPLIED TO EACH CABLE IN ALL SERIES CIRCUITS WHERE WORK IS BEING DONE AND WHERE TWO OR MORE CIRCUITS EXIST IN A COMMON PULLBOX OR POST BASE. THE TAPE SHALL BE APPLIED ON THE CABLE BETWEEN THE SPLICES AND THE CONDUIT, USING ONE COLOR FOR EACH CIRCUIT. THE COLORS WHITE, GRAY, GREEN,AND ORANGE SHALL NOT BE USED.
4. CONTRACTOR SHALL GIVE THE BUREAU OF STREET LIGHTING YARD (PHONE 323-913-4744) TWO WORKING DAYS NOTICE BEFORE ANY WORK IS DONE ON AN EXISTING SERIES CIRCUIT.

CIRCUIT DIAGRAM LEGEND

- REMOVE EXISTING LAMP

MULTIPLE CIRCUIT NOTES

1. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE SERVING COMPANY BEFORE DOING ANY WORK OR MAKING ANY CONNECTIONS ON AN EXISTING CIRCUIT. SEE SECTIONS 16430 AND 2100 OF SPECIAL SPECIFICATIONS.
2. MULTIPLE CIRCUIT WIRE SHALL BE NO. 8 AWG STRANDED COPPER CONDUCTOR. TYPE THWN/THHN INSULATION, UL APPROVED FOR 600 VOLT OPERATION UNLESS OTHERWISE SPECIFIED HEREON.
3. THREE WIRES (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE,) SHALL BE INSTALLED IN ALL MULTIPLE CIRCUIT CONDUIT UNLESS OTHERWISE PROVIDED FOR HEREON.
4. EVEN NUMBERED ELECTROLIERS SHALL BE CONNECTED TO RED AND WHITE WIRES AND ODD NUMBERED ELECTROLIERS SHALL BE CONNECTED TO BLACK AND WHITE WIRES.
5. ELECTROLIERS SHALL BE WIRED PER TYPICAL MULTIPLE CIRCUIT ELECTROLIER WIRING DETAIL, BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1, UNLESS OTHERWISE SPECIFIED.
6. MULTIPLE CIRCUITS IN CONDUITS CONTAINING MORE THAN THREE CONDUCTORS SHALL BE APPROPRIATELY IDENTIFIED BY LABELING CONDUCTORS "A", "B", ETC. WITH APPROVED SELF-LAMINATING LETTER TAPE WRAPPED AT LEAST TWICE AROUND THE CONDUCTOR IN EACH PULLBOX. (W.H. BRADY, SPECIAL SELF-LAMINATING WIRE MARKERS OR EQUIVALENT)

LEGEND

- EXISTING ELECTROLIER TO BE RELOCATED
- EXISTING UTILITARIAN LIGHTS ON WOODEN POLES WHICH SHALL BE MAINTAINED IN SERVICE UNTIL THE PERMANENT ELECTROLIER LIGHTING SYSTEM IS PLACED IN SERVICE. CONTRACTOR MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING UTILITARIAN LIGHTS IN SERVICE PROVIDED THAT SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
- EXISTING ELECTROLIER TO BE REMOVED. (SEE GENERAL NOTE 8)
- NEW ELECTROLIER
- EXISTING ELECTROLIER, NOT TO BE REMOVED OR MODIFIED
- PULLBOX TYPE 2 UNLESS OTHERWISE SHOWN HEREON. (SEE DELTA NO. 26). ADDITIONAL PULLBOXES SHALL BE REQUIRED AS SPECIFIED.
- EXISTING PULLBOX
- EXISTING 1" CONDUIT
- EXISTING 1-1/2" CONDUIT
- EXISTING 2" CONDUIT
- NEW 1" CONDUIT
- NEW 1-1/2" CONDUIT
- NEW 2" CONDUIT
- ABANDON CONDUIT (SEE GENERAL NOTE NO.8 & SUPPLEMENTAL NOTE NO.7)
- EXISTING ELECTROLIER FOUNDATION
- FUTURE ELECTROLIER
- PROPOSED CATCH BASIN
- FOR PROP. 218 AND GIS SECTION USE ONLY. (GENERAL BENEFIT)

NOTICE TO CONTRACTORS MATERIAL LIST

FOLLOWING IS A SUMMARY OF NEW ELECTROLIERS, LUMINAIRES, LAMPS, BALLASTS, FOUNDATIONS, AND OTHER EQUIPMENT WHICH SHALL BE SUPPLIED AND INSTALLED BY THE CONTRACTOR. THIS IS NOT INTENDED TO BE A COMPLETE LIST OF ALL MATERIALS REQUIRED. UNLESS NOTED OTHERWISE, EQUIVALENT PRODUCTS BY OTHER MANUFACTURERS MAY BE SUBMITTED TO THE ENGINEER OF RECORD FOR REVIEW AND APPROVAL.

SYMBOL	ITEM	QUANTITY	DESCRIPTION	STANDARD PLAN NO.	REV. NO.	NOMINAL WATTAGE
	LUMINAIRE	958 (+ 50 SPARE)	2W LEDPOD XL28 HANDRAIL LIGHT 30 31 32 33			2W
	LUMINAIRE	354 (+ 25 SPARE)	2W LEDPOD 50 HANDRAIL LIGHT 30 31 32 33			2W
	JUNCTION BOX	10	14"x8"x4"D STEEL J-BOX, NEMA 4X, LOCKABLE LEDPOD DRIVER ENCLOSURE 35			
	JUNCTION BOX	27	16"x14"x8"D STEEL J-BOX, NEMA 3R, LOCKABLE, NON-SLIP LID LEDPOD DRIVER ENCLOSURE 35			
	DRIVER	36 (+ 4 SPARE)	100W LED DRIVER 30 31 32 33 34			100W

SUPPLEMENTAL LEGEND

- 14"x8"x4"D STEEL J-BOX, NEMA 4X, LOCKABLE LEDPOD DRIVER ENCLOSURE
- 16"x14"x8"D STEEL J-BOX, NEMA 3R, LOCKABLE, NON-SLIP LID LEDPOD DRIVER ENCLOSURE

35 "STREET LIGHTING - HIGH VOLTAGE" LABEL SHALL BE PROVIDED ON JUNCTION BOX LID.

34 THE DRIVER CATALOG NUMBER IS AS FOLLOWS OR BSL APPROVED EQUAL: (PHILIPS ADVANCE) CAT. #LEDINTA0024V41FD
* SEE SL-2400 FOR INSTALLATION
* DRIVER DESCRIPTION: 120V, 100W, OUTDOOR APPLICATION

33 "OR EQUAL" IS DEFINED AS EQUIPMENT OTHER THAN WHAT IS NOTED HERE, BUT MUST BE ON THE BUREAU OF STREET LIGHTING'S (BSL) APPROVED EQUIPMENT LIST WHICH WAS IN EFFECT ON THE DATE THE CONSTRUCTION CONTRACT WAS AWARDED OR HAVE A LETTER OF APPROVAL FROM THE BSL DATED ON OR BEFORE THE DATE THE CONSTRUCTION CONTRACT WAS AWARDED.

32 CONTRACTOR SHALL SUBMIT A PROTOTYPE, SHOP DRAWINGS, AND METHOD OF ATTACHMENT AND WINDLOAD (100MPH)/SEISMIC (WHICHEVER IS DOMINANT) CALCULATIONS BASED ON THE MOST CURRENT AASHTO SPECIFICATIONS, STAMPED AND SIGNED BY A LICENSED STRUCTURAL OR CIVIL ENGINEER REGISTERED IN THE STATE OF CALIFORNIA TO THE TESTING AND EQUIPMENT EVALUATION SECTION (TEL. NO. 213-847-1831) FOR REVIEW AND APPROVAL. THE CONTRACTOR WILL BE NOTIFIED OF REQUIRED CHANGES, IF ANY, WITHIN 30 DAYS AFTER SHOP DRAWINGS/CALCULATIONS ARE RECEIVED. WRITTEN APPROVAL FROM THE BUREAU ON THE SHOP DRAWINGS IS REQUIRED PRIOR TO FABRICATION OF EQUIPMENT.

31 CONTRACTOR SHALL DELIVER THE FOLLOWING SPARES AND EQUIPMENT TO BSL YARD AS SHOWN IN MATERIAL LIST.

30 THE LUMINAIRE CATALOG NUMBERS ARE AS FOLLOWS OR BSL APPROVED EQUAL:
2W LEDPOD XL28 HANDRAIL LIGHT (RAMPS):
(WAGNER LEDPOD) CAT. # LPXL28FD040K1.9AFLD
* SEE SL-2201 THRU SL-2202 FOR INSTALLATION
* FIXTURE DESCRIPTION: LEDPOD XL28 FLAT BEZEL 4000K 2 WATT ASYMMETRIC FLOOD LENS, 500MA DRIVER.

2W LEDPOD 50 HANDRAIL LIGHT (STAIRS):
(WAGNER LEDPOD) CAT. # LULP040K4A40TP
* SEE SL-2203 THRU SL-2207 FOR INSTALLATION
* FIXTURE DESCRIPTION: LEDPOD, 4000K LED, NEUTRAL WHITE, WITH SPRING CLIP FOR 1-1/2 SCHEDULE 40 PIPE (1.90 INCH DIAMETER WITH .145 INCH WALL) TAMPERPROOF BEZEL, POLYCARBONATE ASYMETRIC LENS AND OPTIC, 500MA DRIVER.

29 THE CONTRACTOR SHALL INSTALL PHILIPS CITY TOUCH OUTDOOR LUMINAIRE CONTROLLER LLC7260 ON ALL LOW VOLTAGE, MULTIPLE CIRCUITS LUMINAIRES. THE UNIT SHOULD BE PICKED UP AT THE BUREAU'S PLAN COUNTER AT 1149 S. BROADWAY STE. 200, LOS ANGELES, CA 90015. THE UNITS WILL BE PROVIDED FOR A NON-REFUNDABLE FEE (APPROXIMATELY $155 PER UNIT). THE CONTRACTOR SHALL GIVE SEVEN WORKING DAYS NOTICE (PHONE 213-847-1492) PRIOR TO PICKING UP THE REMOTE MONITORING UNITS. NODES SHALL BE INSTALLED INTO PHOTOELECTRIC CONTROL STANDARD SOCKET PER ANSI/NEMA C-136.10 AND SHALL BE ORIENTED IN A NORTHERLY DIRECTION. A SEPARATE P.E. CELL IS NOT NEEDED FOR LUMINAIRES EQUIPPED WITH A REMOTE MONITORING NODE.

28 INSTALL TYPE 3 PULLBOX FOR DWP SERVICE. ALL TYPE 3 PULLBOXES SHALL BE OF "COMPOSITE/POLYMER" MATERIAL, W/BOLT-DOWN LID AND SHALL COMPLY WITH STANDARD PLAN "COMPOSITE TYPE 3, REV A" AND APPROVED BY BUREAU OF STREETLIGHTING.

27 CONTRACTOR SHALL LOCATE AND PROTECT STREET LIGHTING PULLBOX PRIOR TO TERMINATING NEW CONDUIT TO PULLBOX. IN THE EVENT THE PULLBOX DOES NOT EXIST OR IS MISSING, THE CONTRACTOR SHALL CONTACT THE PRIVATE ENGINEER (ENGINEER ON RECORD) AND BUREAU OF STREET LIGHTING TO OBTAIN AN APPROVAL FOR THE INSTALLATION OF NEW PULLBOX AT NO COST TO THE CITY.

26 INSTALL FUSE HOLDER(S), FUSE(S) AND CONNECT WIRES INSIDE TYPE 2 PULLBOX.

25 INSTALL TYPE 2 PULLBOX. ALL PULLBOXES SPECIFIED SHALL BE OF "COMPOSITE/POLYMER" MATERIAL WITH BOLT-DOWN LID AND SHALL COMPLY WITH STANDARD PLAN "COMPOSITE TYPE 2, REV B" AND APPROVED BY BUREAU OF STREETLIGHTING.

24 TAPE ENDS OF SPARE WIRE.

23 INSTALL THREE MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE)

22 REMOVE EXISTING STREET LIGHTING WIRES.

21 MULTIPLE SERVICE LOCATION. INTERCEPT CONDUIT INSTALLED BY OTHERS AND INSTALL TYPE 3 SERVICE PULLBOX. VERIFY EXACT LOCATION OF CONDUIT. PHONE DEPT. OF WATER AND POWER UNDERGROUND ENGINEERING FIVE DAYS PRIOR TO START OF WORK AT THIS LOCATION. (PHONE: 213-367-3003)

20 CONTRACTOR SHALL REQUEST A PERMIT TO PRUNE TREE FROM THE URBAN FORESTRY DIVISION (213) 847-3077, FIVE DAYS PRIOR TO THE INSTALLATION OF ELECTROLIER. ALL TREE WORK SHALL BE PERFORMED TO TREE CARE PROFESSION BEST MANAGEMENT PRACTICES AND TO THE SATISFACTION OF THE URBAN FORESTRY DIVISION.

19 INSTALL APPROVED CONNECTING DEVICES PER DETAIL "B", BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1.

18 INSTALL APPROVED CONNECTING DEVICES PER DETAIL "A", BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1.

17 MULTIPLE SERVICE LOCATION. INSTALL 10' OF 2" GALVANIZED CONDUIT SERVICE RISER ON POLE. EXTEND CONDUIT TO THE ALLEY B.C. AND INSTALL TYPE 3 PULLBOX UNLESS OTHERWISE SPECIFIED. INSTALL PULLWIRE.

16 INSTALL FIVE MULTIPLE CIRCUIT WIRES: (COLOR CODE: 2-RED, 2-BLACK, 1-WHITE)

15 INSTALL TWO MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-BLACK, 1-WHITE)

14 INSTALL TWO MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-RED, 1-WHITE)

13 INSTALL 1" CONDUIT BEND.

12 INSTALL ADDITIONAL 2" CONDUIT BEND FOR TRAFFIC SIGNAL WIRING.

11 INSTALL ONE APPROVED FUSE HOLDER WITH 30 AMP FUSE BETWEEN EACH SERVICE WIRE (NOT NEUTRAL WIRE) OR SERVICE WIRE CONNECTING DEVICE AND STREET LIGHTING CIRCUIT WIRE. SERVING COMPANY WILL INSTALL SERVICE.

10 JOIN CONDUIT

9 MULTIPLE SERVICE LOCATION. INSTALL TYPE 3 PULLBOX UNLESS OTHERWISE SPECIFIED AND 10' OF 2" GALVANIZED CONDUIT SERVICE RISER ON POLE. INSTALL PULLBOX NO CLOSER THAN 5' AND NO FARTHER THAN 15' FROM THE SERVICE POLE.

8 SERIES SERVICE POLE. INSTALL ONE TERMINAL CUTOFF BOX STANDARD PLAN B-3724 WITH ONE DISCONNECTING SWITCH FOR EACH CIRCUIT. SERVING COMPANY WILL INSTALL SERVICE.

7 CONSTRUCT CASE 4 DRIVEWAY RETURN PER STANDARD PLAN NO. S-440

6 CONSTRUCT CASE 3 DRIVEWAY RETURN PER STANDARD PLAN NO. S-440.

5 INTERCEPT CONDUIT AND INSTALL PULLBOX.

4 THREAD AND CAP CONDUIT AT END OF IMPROVEMENT.

3 INSTALL CONDUIT ONLY.

2 CONNECT WIRES (PER CIRCUIT DIAGRAM WHERE APPLICABLE).

1 TERMINATE CONDUIT IN STREET LIGHTING PULLBOX.

THE ABOVE NOTES ARE APPLICABLE ONLY WHERE SPECIFIED ON THIS PLAN.

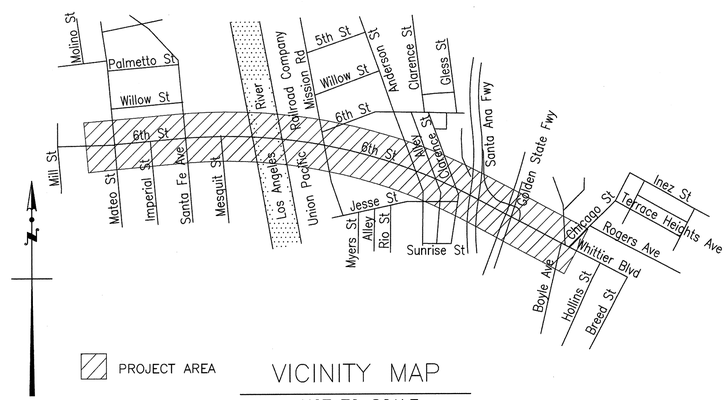
PLAN OF ELECTROLIER LIGHTING SYSTEM

(M)=MAJOR, (S)=SECONDARY, (L)=LOCAL, (C)=COLLECTOR STREET	FROM	TO
STAIR AND RAMP	MATEO ST (S)	BOYLE AVE (S)



PROJECT AREA

VICINITY MAP
NOT TO SCALE

ALL CONSTRUCTION IS PROHIBITED ON MAJOR AND SECONDARY STREET BETWEEN:
6:00 A.M. TO 9:00 A.M.
3:30 P.M. TO 7:00 P.M.

PROCEDURE FOR STREET LIGHT CIRCUIT CLEARANCE

- HIGH VOLTAGE CIRCUIT CLEARANCE REQUESTS SHALL BE MADE TO THE BUREAU OF STREET LIGHTING AND WILL BE PERFORMED BY CITY CREWS.
- LOW VOLTAGE CIRCUIT CLEARANCE SHALL BE PERFORMED BY THE QUALIFIED CONTRACTOR RESPONSIBLE FOR CONSTRUCTION PROJECTS.
- PRIOR TO CONSTRUCTION, THE CONTRACTOR SHALL SUBMIT TWO (2) COPIES OF THE PLAN (24"X36") AND NOTIFY THE INSPECTOR TO SUBMIT "CONSTRUCTION START NOTICE" AND M-21 FORM TO LADWP STREET LIGHT SUPPORT (111 N. HOPE STREET, RM 910, LOS ANGELES, CA 90012)

FOR DETAILED PROCEDURES, SEE WWW.bsl.lacity.org (CLICK ON THE BUSINESS/CONTRACTORS LINK).

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 1

THE STREET LIGHTING EQUIPMENT ON THIS PLAN MAY BE SUBJECT TO CHANGE ("GREEN BOOK" 2006 §307-1.3). THE CONTRACTOR SHALL NOT ORDER ANY NEW STREET LIGHTING EQUIPMENT PRIOR TO APPROVAL BY THE BUREAU OF STREET LIGHTING, EQUIPMENT APPROVAL SECTION (M-40 FORM). CONTACT (213) 847-1831 FOR MORE INFORMATION.

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 2

THIS PROJECT IS IMPACTED BY PROPOSITION 218

ELECTROLIER(S) SPECIFIED HEREON SHALL NOT BE INSTALLED UNTIL THE LEGAL REQUIREMENTS OF PROPOSITION 218 HAVE BEEN SATISFIED. THE CITY INSPECTOR SHALL CONTACT THE BUREAU OF STREET LIGHTING, ENGINEERING AND TECHNICAL SERVICES DIVISION AT (213) 847-1431 FOR CONSTRUCTION CLEARANCE. UNDERGROUND FACILITIES MAY BE INSTALLED PRIOR TO PROPOSITION 218 CONSTRUCTION CLEARANCE.

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 3

THIS PROJECT IS SUBJECT TO "BUY AMERICA" REQUIREMENTS OF TITLE 23 UNITED STATES CODE, SECTION 313. CERTIFICATION OF COMPLIANCE IS REQUIRED TO BE SUBMITTED TO THE PROJECT INSPECTOR. SEE PROJECT SPECIFICATIONS.

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 4

CONTRACTOR SHALL NOTIFY THE STREET LIGHTING ENGINEER (TELEPHONE: 213-847-1459) A MINIMUM OF SEVEN (7) WORKING DAYS PRIOR TO WORKING ON ANY ELECTROLIER, WITH EXISTING TE.ECOMMUNICATION EQUIPMENT, WHICH REQUIRES REMOVAL AND/OR RELOCAION.

CITY OF LOS ANGELES
DEPARTMENT OF PUBLIC WORKS
BUREAU OF STREET LIGHTING

ADDENDUM 5

NOTICE TO CONTRACTORS GENERAL NOTES

1. ALL WORK SHALL CONFORM TO THE LATEST BOARD OF PUBLIC WORKS OF THE CITY OF LOS ANGELES ADOPTED EDITION AND SUPPLEMENTS TO THE "GREENBOOK STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION" AS MODIFIED BY THE CORRESPONDING ISSUE OF THE BROWN BOOK, THE LATEST EDITION OF THE BUREAU OF STREET LIGHTING "SPECIAL SPECIFICATIONS", AND THE SPECIAL PROVISIONS.
2. ELECTROLIERS SHALL BE INSTALLED WITH CENTERLINE 30" BEHIND THE CURB FACE, AND WITH LUMINAIRE ARM ORIENTED OVER THE STREET AND PERPENDICULAR TO ITS CENTER LINE, EXCEPT AS OTHERWISE SPECIFIED HEREON.
3. ELECTROLIERS SPECIFIED TO BE LOCATED INSIDE OF THE CURB RETURN SHALL BE INSTALLED WITH THE CENTER OF THE ELECTROLIER 30 INCHES BEHIND THE CURB FACE MEASURED RADIALLY, AND WITH THE LUMINAIRE ARM ORIENTED OVER THE STREET AND PERPENDICULAR TO THE STREET CENTERLINE.
4. ELECTROLIERS SHALL BE ERECTED SO THAT THE BASE DOOR IS PERPENDICULAR TO THE CURB AND LOCATED ON THE SIDE OF THE ELECTROLIER AWAY FROM ONCOMING TRAFFIC.
5. ALL EXISTING ELECTROLIERS SPECIFIED TO BE REMOVED OR MODIFIED ON THIS PLAN SHALL BE MAINTAINED IN SERVICE UNTIL THE NEW ELECTROLIER LIGHTING SYSTEM IS PLACED IN SERVICE, UNLESS OTHERWISE SPECIFIED HEREON. ALL OTHER ELECTROLIERS ON CIRCUITS AFFECTED BY THIS PLAN SHALL BE MAINTAINED IN SERVICE. CONTRACTOR MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING ELECTROLIER LIGHTS IN SERVICE PROVIDED THAT SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
6. ALL EQUIPMENT REQUIRED HEREON FOR FURNISHING ELECTRICAL SERVICE FOR EACH CIRCUIT SHALL BE INSTALLED AND INSPECTED PRIOR TO ANY OTHER CONSTRUCTION ON THAT CIRCUIT UNLESS OTHERWISE APPROVED BY THE ENGINEER.
7. THE CONTRACTOR SHALL GIVE WRITTEN NOTICE, 72 HOURS IN ADVANCE OF THE REMOVAL OF AN ELECTROLIER, TO ANY PUBLIC AGENCY MAINTAINING EQUIPMENT SUPPORTED BY THAT ELECTROLIER.
8. FOUNDATIONS AND PULLBOXES NOT REMAINING IN SERVICE SHALL BE REMOVED. THE RESULTING EXCAVATION SHALL BE FILLED WITH MATERIAL SIMILAR TO ADJACENT MATERIAL AND SATISFACTORILY COMPACTED WITH A MECHANICAL COMPACTOR IN LAYERS NOT EXCEEDING 12 INCHES. THE SURFACE SHALL BE FINISHED TO MATCH THE ADJACENT SURFACE.
9. THE CONTRACTOR SHALL REQUEST A BURN TEST BY NOTIFYING THE BUREAU OF CONTRACT ADMINISTRATION PROJECT INSPECTOR A MINIMUM OF 7 CALENDAR DAYS IN ADVANCE OF THE DATE ON WHICH A BURN TEST IS DESIRED.
10. CONTRACTOR SHALL GIVE THREE WORKING DAYS NOTICE (PHONE 323-913-4743) PRIOR TO DELIVERY OF ANY EQUIPMENT SPECIFIED TO BE DELIVERED TO THE BUREAU OF STREET LIGHTING YARD AT 4550 SANTA MONICA BLVD., SUCH DELIVERIES SHALL BE BETWEEN 8:30 AM AND 3:00 PM AND SHALL INCLUDE ALL HANDLING AND LOADING FROM THE TRUCK BY THE CONTRACTOR. CONTRACTOR MUST SUPPLY A COPY OF THE STREET LIGHTING SHEETS WITH THE DELIVERY OF MATERIAL.
11. PULLBOXES LOCATED ADJACENT TO DRIVEWAYS AND ALLEYS SHALL BE INSTALLED AT A MINIMUM DISTANCE OF FIVE FEET FROM THE TOP OF THE "X" OF A CASE 1 OR CASE 2 DRIVEWAY OR AT A MINIMUM DISTANCE OF TWO FEET FROM THE B.C. OF A CASE 3 OR CASE 4 DRIVEWAY OR FIVE FEET FROM TRAVELLED WAY OF THE ALLEY.
12. PULLBOXES INSTALLED AT INTERSECTIONS OF LOCAL STREET SHALL BE INSTALLED NO CLOSER TO THE INTERSECTIONS THAN THE B.C.R. OF AN ASSUMED FUTURE 25' RADIUS CURB RETURN UNLESS OTHERWISE APPROVED BY THE ENGINEER. PULLBOXES INSTALLED AT INTERSECTIONS WHICH INVOLVE ONE OR MORE MAJOR OR SECONDARY STREETS SHALL BE INSTALLED NO CLOSER TO INTERSECTIONS THAN THE B.C.R. OF AN ASSUMED FUTURE 35' RADIUS CURB RETURN UNLESS OTHERWISE APPROVED BY THE ENGINEER.
13. CONDUIT SHALL BE INSTALLED AROUND ALL EXISTING AND/OR PROPOSED CATCH BASINS PER BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-304-0 UNLESS OTHERWISE SPECIFIED.
14. ALL SCREWS PROVIDED FOR ELECTROLIER STANDARD BASE DOORS AND BASE COVERS SHALL BE CADMIUM PLATED STEEL, 1/4-20NC MACHINE SCREWS, WITH PHILLIPS RECESSED ROUND HEADS.
15. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE AFFECTED UTILITY COMPANY BEFORE DOING ANY WORK IN CLOSE PROXIMITY TO ANY OVERHEAD ELECTRIC LINE. SEE SECTIONS 16430 AND 2100 OF SPECIAL SPECIFICATIONS.
16. UNLESS OTHERWISE SPECIFIED HEREON, LUMINAIRES SHALL PROVIDE A MEDIUM, CUTOFF, TYPE III, LIGHTING DISTRIBUTION PATTERN CONFORMING TO I.E.S DESIGNATION.
17. CONTRACTOR SHALL BE RESPONSIBLE FOR PRESERVING THE CONDITION OF ALL EXISTING EQUIPMENT TO BE REUSED, MODIFIED OR RETURNED TO THE BUREAU OF STREET LIGHTING YARD.
18. EQUIPMENT INDICATED "DISPOSE" SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND BE DISPOSED OF BY THE CONTRACTOR.
19. STREET LIGHTING CONDUIT SHALL BE INSTALLED BY JACKING OR DRILLING METHODS. INSTALLATION OF CONDUIT BY OPEN TRENCHING IS NOT PERMITTED UNLESS APPROVED BY THE DIRECTOR, BUREAU OF STREET LIGHTING.
20. CONTRACTOR SHALL REPAIR AT HIS COST, THE DAMAGE CAUSED TO EXISTING SPRINKLER SYSTEMS DURING THE CONSTRUCTION OF THIS PROJECT. REPAIRS SHALL BE MADE WITHIN 5 WORKING DAYS AFTER DAMAGE OCCURS.
21. NOT USED.
22. CONTRACTOR SHALL BE RESPONSIBLE FOR ALL EXISTING ELECTROLIERS SPECIFIED TO BE RELOCATED AND MODIFIED ON THIS PLAN. PRIOR TO REINSTALLATION, CONTRACTOR SHALL REPAIR OR REPLACE ALL EXISTING STREET LIGHTING FACILITIES FOUND TO BE DAMAGED PRIOR TO START OF OR DURING THE CONSTRUCTION OF THIS PROJECT AT NO COST TO THE CITY. (1)

SUPPLEMENTAL NOTES

1. CONTRACTOR SHALL LOCATE & PROTECT SUBSTRUCTURE(S) SHOWN HEREON, & SHALL PROVIDE FOR A MINIMUM 12" HORIZONTAL CLEARANCE BETWEEN FOUNDATION & SUBSTRUCTURES. IN THE EVENT A 12" CLEARANCE CANNOT BE ACHIEVED, THE CONTRACTOR SHALL MAKE ARRANGEMENTS FOR RELOCATION OF SUBSTRUCTURES AT NO COST TO THE CITY.
2. IN THE EVENT OF OVERHEAD LINES CONFLICT WITH ELECTROLIERS THE CONTRACTOR SHALL MAKE NECESSARY ARRANGEMENTS WITH THE DEPT. OF WATER AND POWER TO RAISE THEIR OVERHEAD FACILITIES IN ORDER TO PROVIDE FOR THE FOLLOWING CLEARANCES WITH EXISTING AND/OR PROPOSED ELECTROLIERS.
   LOW VOLTAGE: MINIMUM 3' CLEARANCE BETWEEN OVERHEAD LINES AND ELECTROLIERS
   HIGH VOLTAGE: MINIMUM 6' CLEARANCE BETWEEN OVERHEAD LINES AND ELECTROLIERS
3. STREET TREES SHALL NOT BE PLANTED CLOSER THAN 20' FROM EXISTING OR PROPOSED ELECTROLIER, UNLESS OTHERWISE INDICATED.
4. IN THE EVENT OF OVERHEAD COMMUNICATION LINE CONFLICT WITH ELECTROLIERS, CONTRACTOR SHALL MAKE NECESSARY ARRANGEMENTS TO PROVIDE A MINIMUM 12" CLEARANCE.
5. PROPOSED ELECTROLIER FOUNDATIONS AND PULLBOXES SHALL BE INSTALLED OUTSIDE OF ACCESS RAMP AREAS. EXISTING PULLBOXES SHALL BE RECONSTRUCTED TO CLEAR ACCESS RAMPS BY A MINIMUM OF 12". EXISTING CONDUIT SHALL BE LOWERED AS NECESSARY PER SEC. 307-2.5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
6. CONDUIT THAT IS TO BE ABANDONED SHALL HAVE WIRES REMOVED. THE CONDUIT SHALL BE REMOVED TO A DEPTH OF AT LEAST 12" BELOW THE SURFACE AND HAVE BOTH ENDS CRIMPED.
7. NOTWITHSTANDING SECTION 16950.2 OF THE SPECIAL SPECIFICATIONS FOR THE CONSTRUCTION STREET LIGHTING SYSTEMS MAGNETIC REGULATING BALLASTS ARE REQUIRED IN ALL COBRA-HEAD LUMINAIRES.
8. ALL #10 AWG WIRES USED FOR MULTIPLE CIRCUIT ELECTROLIER WIRING REFERENCED IN STANDARD DRAWING NO. L-301-1 SHALL BE #10 AWG SOLID COPPER CONDUCTORS.
9. AT LEAST TWO (2) WORKING DAYS PRIOR TO STARTING ANY EXCAVATION. THE CONTRACTOR MUST OBTAIN AN INQUIRY I.D. NUMBER FROM UNDERGROUND SERVICE ALERT BY CALLING (800) 422-4133 OR BY DIALING 811.

SERIES CIRCUIT NOTES

1. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE SERVING COMPANY, AND "MEN AT WORK" SIGNS SHALL BE POSTED AT THE SERVICE POINT BEFORE ANY WORK IS DONE OR ANY CONNECTIONS MADE ON AN EXISTING CIRCUIT. SEE SECTIONS 16430 AND 2100 OF SPECIAL SPECIFICATIONS.
2. SERIES CIRCUIT WIRE SHALL BE NO. 8 AWG STRANDED COPPER CONDUCTOR, INSULATED WITH 0.110" APPROVED POLYETHYLENE COMPOUND RATED FOR 5,000 VOLT OPERATION.
3. TWO OR MORE TURNS OF SELF-ADHESIVE COLORED TAPE WITH A MINIMUM WIDTH OF 1/2 INCH SHALL BE APPLIED TO EACH CABLE IN ALL SERIES CIRCUITS WHERE WORK IS BEING DONE AND WHERE TWO OR MORE CIRCUITS EXIST IN A COMMON PULLBOX OR POST BASE. THE TAPE SHALL BE APPLIED ON THE CABLE BETWEEN THE SPLICES AND THE CONDUIT, USING ONE COLOR FOR EACH CIRCUIT. THE COLORS WHITE, GRAY, GREEN, AND ORANGE SHALL NOT BE USED.
4. CONTRACTOR SHALL GIVE THE BUREAU OF STREET LIGHTING YARD (PHONE 323-913-4744) TWO WORKING DAYS NOTICE BEFORE ANY WORK IS DONE ON AN EXISTING SERIES CIRCUIT.

- EXISTING LAMP
- REMOVE EXISTING LAMP

MULTIPLE CIRCUIT NOTES

1. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE SERVING COMPANY BEFORE DOING ANY WORK OR MAKING ANY CONNECTIONS ON AN EXISTING CIRCUIT. SEE SECTIONS 16430 AND 2100 OF SPECIAL SPECIFICATIONS.
2. MULTIPLE CIRCUIT WIRE SHALL BE NO. 8 AWG STRANDED COPPER CONDUCTOR. TYPE THWN/THHN INSULATION, UL APPROVED FOR 600 VOLT OPERATION UNLESS OTHERWISE SPECIFIED HEREON.
3. THREE WIRES (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE,) SHALL BE INSTALLED IN ALL MULTIPLE CIRCUIT CONDUIT UNLESS OTHERWISE PROVIDED FOR HEREON.
4. EVEN NUMBERED ELECTROLIERS SHALL BE CONNECTED TO RED AND WHITE WIRES AND ODD NUMBERED ELECTROLIERS SHALL BE CONNECTED TO BLACK AND WHITE WIRES.
5. ELECTROLIERS SHALL BE WIRED PER TYPICAL MULTIPLE CIRCUIT ELECTROLIER WIRING DETAIL, BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1, UNLESS OTHERWISE SPECIFIED.
6. MULTIPLE CIRCUITS IN CONDUITS CONTAINING MORE THAN THREE CONDUCTORS SHALL BE APPROPRIATELY IDENTIFIED BY LABELING CONDUCTORS "A", "B", ETC. WITH APPROVED SELF-LAMINATING LETTER TAPE WRAPPED AT LEAST TWICE AROUND THE CONDUCTOR IN EACH PULLBOX. (W.H. BRADY, SPECIAL SELF-LAMINATING WIRE MARKERS OR EQUIVALENT)

LEGEND

- (R) EXISTING ELECTROLIER TO BE RELOCATED
- EXISTING UTILITARIAN LIGHTS ON WOODEN POLES WHICH SHALL BE MAINTAINED IN SERVICE UNTIL THE PERMANENT ELECTROLIER LIGHTING SYSTEM IS PLACED IN SERVICE. CONTRACTOR MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING UTILITARIAN LIGHTS IN SERVICE PROVIDED THAT SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
- EXISTING ELECTROLIER TO BE REMOVED. (SEE GENERAL NOTE 8)
- NEW ELECTROLIER
- EXISTING ELECTROLIER, NOT TO BE REMOVED OR MODIFIED
- PULLBOX TYPE 2 UNLESS OTHERWISE SHOWN HEREON. (SEE DELTA NOTES NO. 25 AND NO. 26). ADDITIONAL PULLBOXES SHALL BE REQUIRED AS SPECIFIED. (1)
- EXISTING PULLBOX
- EXISTING 1" CONDUIT
- EXISTING 1-1/2" CONDUIT
- EXISTING 2" CONDUIT
- NEW 1" CONDUIT
- NEW 1-1/2" CONDUIT
- NEW 2" CONDUIT
- ABANDON CONDUIT (SEE GENERAL NOTE NO.8 & SUPPLEMENTAL NOTE NO.6) (1)
- EXISTING ELECTROLIER FOUNDATION
- FUTURE ELECTROLIER
- PROPOSED CATCH BASIN
- FOR PROP. 218 AND GIS SECTION USE ONLY. (GENERAL BENEFIT)

NOTICE TO CONTRACTORS MATERIAL LIST

FOLLOWING IS A SUMMARY OF NEW ELECTROLIERS, LUMINAIRES, LAMPS, BALLASTS, FOUNDATIONS, AND OTHER EQUIPMENT WHICH SHALL BE SUPPLIED AND INSTALLED BY THE CONTRACTOR. THIS IS NOT INTENDED TO BE A COMPLETE LIST OF ALL MATERIALS REQUIRED. UNLESS NOTED OTHERWISE, EQUIVALENT PRODUCTS BY OTHER MANUFACTURERS MAY BE SUBMITTED TO THE ENGINEER OF RECORD FOR REVIEW AND APPROVAL.

SYMBOL	ITEM	QUANTITY (1)	DESCRIPTION	STANDARD PLAN NO.	REV. NO.	NOMINAL WATTAGE

(1)

(36) ELECTRICAL PANELBOARD SHALL BE AS FOLLOWS OR BSL APPROVED EQUAL: 480/277V, 3PH, 4W, 100A, 18 KAIC SERVICE RATED, NEMA 3R, LOCKABLE, GALVANIZED STEEL, 18 POLES

(37) INSTALL NINE #6 MULTIPLE CIRCUIT WIRES (TWO CIRCUITS, 480V, 3PH):
COLOR CODE: 2-BROWN (PHASE A) 2-ORANGE (PHASE B) 2-YELLOW (PHASE C) 2-GRAY (NEUTRAL) 1-GREEN (GROUND)

(36) INSTALL TWO CATEGORY 6 ETHERNET CABLES.

(35) INSTALL FIVE #6 MULTIPLE CIRCUIT WIRES (ONE CIRCUIT, 480V, 3PH):
COLOR CODE: 1-BROWN (PHASE A) 1-ORANGE (PHASE B) 1-YELLOW (PHASE C) 1-GRAY (NEUTRAL) 1-GREEN (GROUND)

(34) INSTALL FOUR #10 MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE, 1-GREEN)

(33) INSTALL ONE CATEGORY 6 ETHERNET CABLE.

(32) ROUTE ALL TRANSVERSE-ORIENTED CONDUIT IN THE VIADUCT DECK UNDER POST TENSIONING DUCT AT FLOOR BEAM LOCATIONS. COORDINATE EXACT ROUTING WITH STRUCTURAL PLANS.

(31) SEE DRAWING SL-1403 DETAIL 3 FOR TYPICAL IN-GRADE ARCH LIGHT INSTALLATION.

(30) SEE DRAWING SL-1402 FOR TYPICAL CONDUIT INSTALLATION IN VIADUCT COLUMNS.

(29) ALL COBRAHEAD LUMINAIRES REGARDLESS OF WATTAGE ON LOW VOLTAGE, MULTIPLE CIRCUITS SHALL BE EQUIPPED WITH PHILIPS CITY TOUCH OUTDOOR CONTROLLER LLC7280. THE UNIT SHOULD BE PICKED UP AT THE BUREAU'S PLAN COUNTER AT 1149 S. BROADWAY, SUITE #200, LOS ANGELES, CA 90015. THE UNITS WILL BE PROVIDED FOR A NON-REFUNDABLE FEE (APPROXIMATELY $ 156.00 PER UNIT). THE CONTRACTOR SHALL GIVE SEVEN WORKING DAYS NOTICE (TELEPHONE 231 847-1498) PRIOR TO PICKING UP THE MONITORING UNITS. NODES SHALL BE INSTALLED INTO THE PHOTOELECTRIC CONTROL STANDARD SOCKET PER ANSI/NEMA C-136.10 AND SHALL BE ORIENTED IN A NORTHERLY DIRECTION. A SEPARATE P.E. CELL IS NOT REQUIRED FOR LUMINAIRES EQUIPPED WITH A REMOTE MONITORING NODE. (1)

(28) INSTALL TYPE 3 PULLBOX FOR DWP SERVICE. ALL TYPE 3 PULLBOXES SHALL BE OF "COMPOSITE/POLYMER" MATERIAL W/BOLT-DOWN LID AND SHALL COMPLY WITH STANDARD PLAN "COMPOSITE TYPE 3, REV A" AND APPROVED BY BUREAU OF STREETLIGHTING.

(27) CONTRACTOR SHALL LOCATE AND PROTECT STREET LIGHTING PULLBOX PRIOR TO TERMINATING NEW CONDUIT TO PULLBOX. IN THE EVENT THE PULLBOX DOES NOT EXIST OR IS MISSING, THE CONTRACTOR SHALL CONTACT THE PRIVATE ENGINEER (ADMEER ON RECORD) AND BUREAU OF STREET LIGHTING TO OBTAIN AN APPROVAL FOR THE INSTALLATION OF NEW PULLBOX AT NO COST TO THE CITY.

(26) INSTALL FUSE HOLDER(S), FUSE(S) AND CONNECT WIRES INSIDE TYPE 2 PULLBOX.

(25) INSTALL TYPE 2 PULLBOX. ALL PULLBOXES SPECIFIED SHALL BE OF "COMPOSITE/POLYMER" MATERIAL WITH BOLT-DOWN LID AND SHALL COMPLY WITH STANDARD PLAN "COMPOSITE TYPE 2, REV B" AND APPROVED BY BUREAU OF STREETLIGHTING.

(24) TAPE ENDS OF SPARE WIRE.

(23) INSTALL THREE MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE)

(22) REMOVE EXISTING STREET LIGHTING WIRES.

(21) MULTIPLE SERVICE LOCATION. INTERCEPT CONDUIT INSTALLED BY OTHERS AND INSTALL TYPE 3 SERVICE PULLBOX. VERIFY EXACT LOCATION OF CONDUIT, PHONE DEPT. OF WATER AND POWER UNDERGROUND ENGINEERING FIVE DAYS PRIOR TO START OF WORK AT THIS LOCATION. (PHONE: 213-367-3003)

(20) CONTRACTOR SHALL REQUEST A PERMIT TO PRUNE TREE FROM THE URBAN FORESTRY DIVISION (213) 847-3077, FIVE DAYS PRIOR TO THE INSTALLATION OF ELECTROLIER. ALL TREE WORK SHALL BE PERFORMED TO TREE CARE PROFESSION BEST MANAGEMENT PRACTICES AND TO THE SATISFACTION OF THE URBAN FORESTRY DIVISION.

(19) INSTALL APPROVED CONNECTING DEVICES PER DETAIL "B", BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1.

(18) INSTALL APPROVED CONNECTING DEVICES PER DETAIL "A", BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1.

(17) MULTIPLE SERVICE LOCATION. INSTALL 10' OF 2" GALVANIZED CONDUIT SERVICE RISER ON POLE. EXTEND CONDUIT TO THE ALLEY B.C. AND INSTALL TYPE 3 PULLBOX UNLESS OTHERWISE SPECIFIED. INSTALL PULLWIRE.

(16) INSTALL FIVE MULTIPLE CIRCUIT WIRES: (COLOR CODE: 2-RED, 2-BLACK, 1-WHITE)

(15) INSTALL TWO MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-BLACK, 1-WHITE)

(14) INSTALL TWO MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-RED, 1-WHITE)

(13) INSTALL 1" CONDUIT BEND.

(12) INSTALL ADDITIONAL 2" CONDUIT BEND FOR TRAFFIC SIGNAL WIRING.

(11) INSTALL ONE APPROVED FUSE HOLDER WITH 30 AMP FUSE BETWEEN EACH SERVICE WIRE (NOT NEUTRAL WIRE) OR SERVICE WIRE CONNECTING DEVICE AND STREET LIGHTING CIRCUIT WIRE. SERVING COMPANY WILL INSTALL SERVICE.

(10) JOIN CONDUIT

(9) MULTIPLE SERVICE LOCATION. INSTALL TYPE 3 PULLBOX UNLESS OTHERWISE SPECIFIED AND 10' OF 2" GALVANIZED CONDUIT SERVICE RISER ON POLE. INSTALL PULLBOX NO CLOSER THAN 5' AND NO FARTHER THAN 15' FROM THE SERVICE POLE.

(8) SERIES SERVICE POLE. INSTALL ONE TERMINAL CUTOFF BOX STANDARD PLAN B-3724 WITH ONE DISCONNECTING SWITCH FOR EACH CIRCUIT. SERVING COMPANY WILL INSTALL SERVICE.

(7) CONSTRUCT CASE 4 DRIVEWAY RETURN PER STANDARD PLAN NO. S-440

(6) CONSTRUCT CASE 3 DRIVEWAY RETURN PER STANDARD PLAN NO. S-440.

(5) INTERCEPT CONDUIT AND INSTALL PULLBOX.

(4) THREAD AND CAP CONDUIT AT END OF IMPROVEMENT.

(3) INSTALL CONDUIT ONLY.

(2) CONNECT WIRES (PER CIRCUIT DIAGRAM WHERE APPLICABLE).

(1) TERMINATE CONDUIT IN STREET LIGHTING PULLBOX.

(1) THE ABOVE NOTES ARE APPLICABLE ONLY WHERE SPECIFIED ON DRAWINGS.

DELTA NOTES

(47) CONTRACTOR SHALL DELIVER THE FOLLOWING SPARES AND EQUIPMENT TO BSL YARD PER GENERAL NOTE NO. 10:
* MIN. OF 10% SPARES FOR ALL EQUIPMENT, AS SHOWN IN MATERIAL LIST.

(46) FOR NON-STANDARD OR 'EQUAL' LIGHTING POLES, LIGHTING EQUIPMENT, AND FOUNDATIONS, THE CONTRACTOR IS RESPONSIBLE TO SUBMIT SHOP DRAWINGS AND STRUCTURAL CALCULATIONS STAMPED BY A REGISTERED STRUCTURAL OR CIVIL ENGINEER LICENSED BY THE STATE OF CALIFORNIA. CALCULATIONS SHALL INCLUDE SEISMIC AND 100MPH WIND LOAD (WHICHEVER IS DOMINANT) BASED ON THE MOST CURRENT AASHTO SPECIFICATIONS. THE CONTRACTOR SHALL SUBMIT, AT THE REQUEST OF BUREAU OF STREET LIGHTING, EQUIPMENT PROTOTYPES. ALLOW 45 DAYS REVIEW AND EVALUATION. WRITTEN APPROVAL FROM THE BUREAU OF STREET LIGHTING IS REQUIRED. POLE INSPECTION BY THE BUREAU OF CONTRACT ADMINISTRATION MAY BE REQUIRED. CONTACT BSL ENGINEER AT (213) 847-1347 FOR DETAILS AND APPOINTMENT. IN ADDITION, APPROVAL OF M-40 FORM, (MATERIAL APPROVAL LIST), IS MANDATORY BEFORE PURCHASING EQUIPMENT, AND IS CONTINGENT UPON APPROVAL OF SHOP DRAWINGS, CALCULATIONS AND PROTOTYPES. (1)

80 MPH WIND LOAD ALLOWED IN BELOW GRADE APPLICATIONS — RFI 0043

(45) 30"Wx36"Hx18"D, NEMA 3R, LOCKABLE, GALVANIZED STEEL,

(44) SEE DRAWING SL-1405 FOR PANELBOARD P-1 PANEL SCHEDULE.

(43) THE COMPONENT CATALOG NUMBERS ARE AS FOLLOWS OR BSL APPROVED EQUAL: DATA ENABLER PRO CAT. # 106-000004-00

(42) THE LUMINAIRE CATALOG NUMBERS ARE AS FOLLOWS OR BSL APPROVED EQUAL:
270W FLOOD LED (PHILIPS COLORREACH POWERCORE GEN2, 23 DEG LENS) FIXTURE CAT. # 123-000153-00 LENS CAT. # 120-000068-01
270W FLOOD LED (PHILIPS COLORREACH POWERCORE GEN2, 8 DEG LENS) FIXTURE CAT. # 123-000153-00 LENS CAT. # 120-000068-05
135W FLOOD LED (PHILIPS COLORREACH COMPACT POWERCORE GEN2, 40 DEG LENS) FIXTURE CAT. # 123-000154-00 LENS CAT. # 120-000068-02
135W FLOOD LED (PHILIPS COLORREACH COMPACT POWERCORE GEN2, 13 DEG LENS) FIXTURE CAT. # 123-000154-00 LENS CAT. # 120-000068-00

(41) SEE DRAWING SL-1103 FOR ELECTRICAL SERVICE EQUIPMENT LAYOUT.

(40) TRANSFORMER PAD SHALL BE INSTALLED PER DWP STANDARD PLAN C721-01.

(39) SEE DRAWING SL-1403 FOR TYPICAL CONTROL ENCLOSURE BLOCKOUT INSTALLATION.

PLAN OF ELECTROLIER LIGHTING SYSTEM

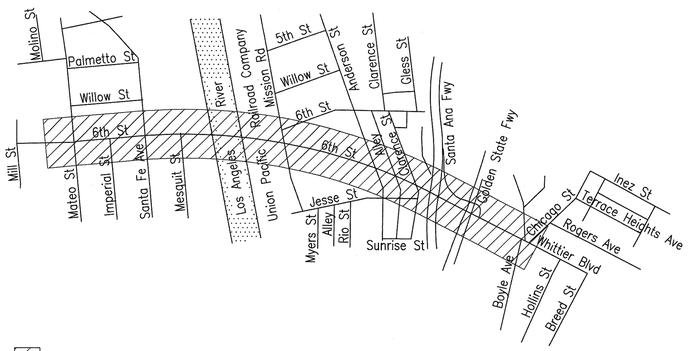
6TH ST (M)	MATEO ST (S)	BOYLE AVE (S)



N

PROJECT AREA

VICINITY MAP
NOT TO SCALE

PROCEDURE FOR STREET LIGHT CIRCUIT CLEARANCE

- HIGH VOLTAGE CIRCUIT CLEARANCE REQUESTS SHALL BE MADE TO THE BUREAU OF STREET LIGHTING AND WILL BE PERFORMED BY CITY CREWS.
- LOW VOLTAGE CIRCUIT CLEARANCE SHALL BE PERFORMED BY THE QUALIFIED CONTRACTOR RESPONSIBLE FOR CONSTRUCTION PROJECTS.
- PRIOR TO CONSTRUCTION, THE CONTRACTOR SHALL SUBMIT TWO (2) COPIES OF THE PLAN (24"X36") AND NOTIFY THE INSPECTOR TO SUBMIT "CONSTRUCTION START NOTICE" AND M-21 FORM TO LADWP STREET LIGHT SUPPORT (111 N. HOPE STREET, RM 910, LOS ANGELES, CA 90012)

FOR DETAILED PROCEDURES, SEE WWW.bsl.lacity.org (CLICK ON THE BUSINESS/CONTRACTORS LINK).

ALL CONSTRUCTION IS PROHIBITED ON MAJOR AND SECONDARY STREET BETWEEN:
6:00 A.M. TO 9:00 A.M.
3:30 P.M. TO 7:00 P.M.

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 1

THE STREET LIGHTING EQUIPMENT ON THIS PLAN MAY BE SUBJECT TO CHANGE ("GREEN BOOK" 2006 §307-1.3). THE CONTRACTOR SHALL NOT ORDER ANY NEW STREET LIGHTING EQUIPMENT PRIOR TO APPROVAL BY THE BUREAU OF STREET LIGHTING, EQUIPMENT APPROVAL SECTION (M-40 FORM). CONTACT (213) 847-1831 FOR MORE INFORMATION. (1)

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 2

THIS PROJECT IS IMPACTED BY PROPOSITION 218

ELECTROLIER(S) SPECIFIED HEREON SHALL NOT BE INSTALLED UNTIL THE LEGAL REQUIREMENTS OF PROPOSITION 218 HAVE BEEN SATISFIED. THE CITY INSPECTOR SHALL CONTACT THE BUREAU OF STREET LIGHTING, ENGINEERING AND TECHNICAL SERVICES DIVISION AT (213) 847-1431 FOR CONSTRUCTION CLEARANCE. UNDERGROUND FACILITIES MAY BE INSTALLED PRIOR TO PROPOSITION 218 CONSTRUCTION CLEARANCE.

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 3

THIS PROJECT IS SUBJECT TO "BUY AMERICA" REQUIREMENTS OF TITLE 23 UNITED STATES CODE, SECTION 313. CERTIFICATION OF COMPLIANCE IS REQUIRED TO BE SUBMITTED TO THE PROJECT INSPECTOR. SEE PROJECT SPECIFICATIONS.

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 4

CONTRACTOR SHALL NOTIFY THE STREET LIGHTING ENGINEER (TELEPHONE: 213-847-1459) A MINIMUM OF SEVEN (7) WORKING DAYS PRIOR TO WORKING ON ANY ELECTROLIER, WITH EXISTING TELECOMMUNICATION EQUIPMENT, WHICH REQUIRES REMOVAL AND/OR RELOCATION.

NOTICE TO CITY INSPECTOR/CONTRACTOR NO. 5

THE BUREAU OF STREET LIGHTING WILL NOT MAINTAIN NOR PERFORM THE STREET LIGHTING CONSTRUCTION ACCEPTANCE TEST OF THE ARCH LIGHTING SYSTEM ON THIS PLAN. BUREAU OF ENGINEERING SHALL VERIFY ALL EQUIPMENT LISTED ON THE PLAN AND PROVIDE STORAGE FOR THE SPARES.

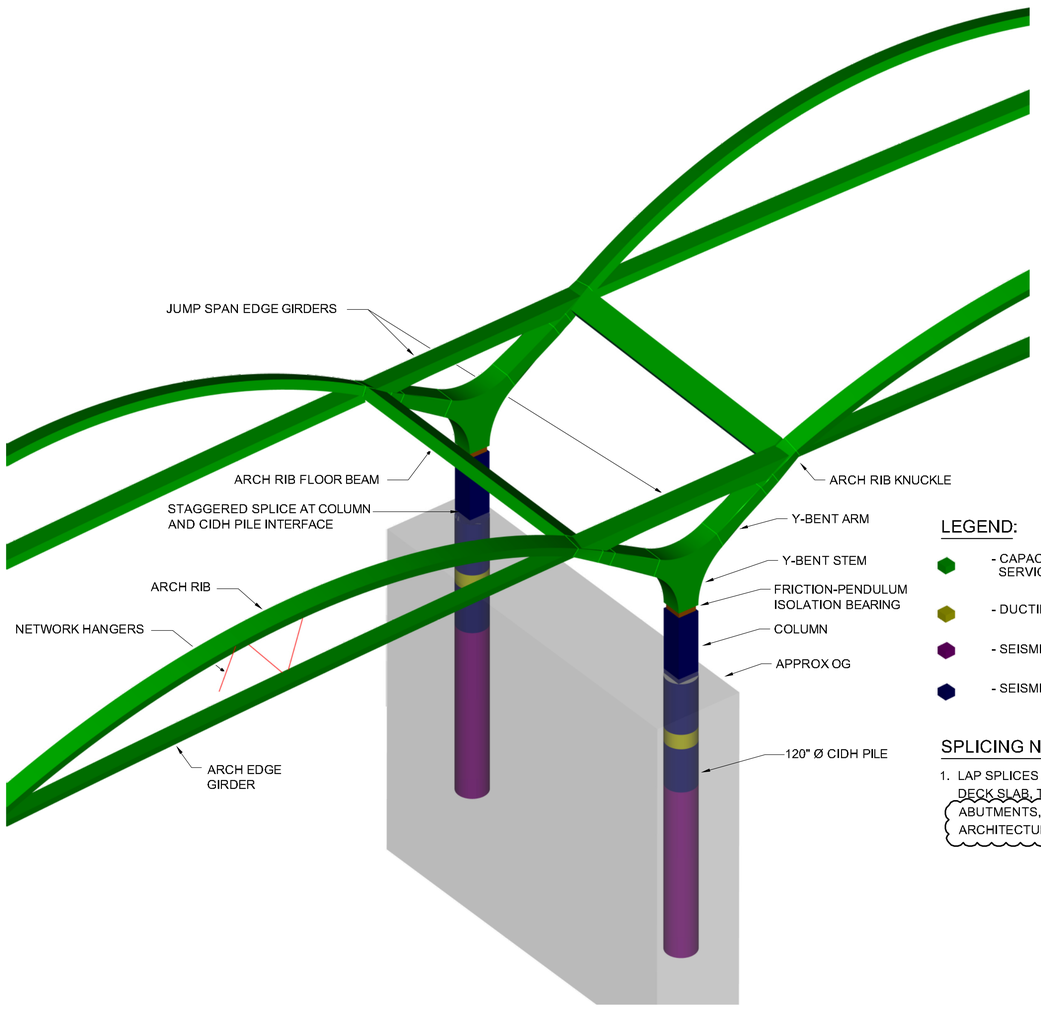
GENERAL NOTES

LOAD AND RESISTANCE FACTOR DESIGN

DESIGN:	PROJECT SPECIFIC DESIGN CRITERIA FOR THE SIXTH STREET BRIDGE REPLACEMENT PROJECT
SEISMIC DESIGN:	PROJECT SPECIFIC DESIGN CRITERIA FOR THE SIXTH STREET BRIDGE REPLACEMENT PROJECT
DEAD LOADS:	INCLUDES 35 PSF FOR FUTURE WEARING SURFACE
CREEP AND SHRINKAGE:	FIP MODEL CODE FOR CONCRETE STRUCTURES, 2010 AVERAGE RELATIVE HUMIDITY = 70% AVERAGE AMBIENT TEMPERATURE = 65° F
LIVE LOADING:	HL93 WITH "LOW-BOY", PERMIT DESIGN LOAD AND 75 PSF AND 90 PSF PEDESTRIAN LOADING.
SEISMIC LOADING:	THE AVERAGE OF SEVEN SITE SPECIFIC GROUND MOTIONS (PEAK ROCK ACCELERATION = 0.6g). SEE PROJECT DESIGN CRITERIA.
REINFORCED CONCRETE:	FOR CONCRETE STRENGTHS, SEE "DRAWING NO. S0-05"
REINFORCEMENT:	ALL REINFORCEMENT TO BE ASTM A706, GRADE 60 UNO. REINFORCEMENT SPECIFIED AS GRADE 80 SHALL BE ASTM A706. EPOXY COATED REINFORCEMENT REQUIRED AT ARCHITECTURAL CONCRETE. SEE DRAWING NOS. S3-03, S3-09, S3-19, S3-20, S5-20 AND S5-48.
PRESTRESSING STEEL:	STRAND PRESTRESSING STEEL SHALL BE ASTM A416, GRADE 270, LOW RELAXATION.
STRUCTURAL STEEL:	ALL STRUCTURAL STEEL SHALL BE ASTM A709 GRADE 50 UON. ASTM A354 THREADED BOLTS SHALL BE GRADE BD.
ARCH HANGERS:	HANGERS SHALL BE GALVANIZED/GALFAN COATED STRUCTURAL STRAND WITH A LUBRICATING/BLOCKING COMPOUND APPLIED CONFORMING TO ASTM A586, GRADE 2 AND PROVIDE THE MINIMUM BREAKING STRENGTH SPECIFIED FOR HELICAL STRAND. HELICAL STRAND SHALL BE PRESTRETCHED PURSUANT TO ASTM A586.



LEGEND:

- CAPACITY PROTECTED SERVICE SPLICE
- DUCTILE PLASTIC HINGE
- SEISMIC CRITICAL - ULTIMATE SPLICE
- SEISMIC CRITICAL - NO SPLICE ZONES

SPLICING NOTES:

1. LAP SPLICES ARE PERMITTED AT DECK SLAB, TYPICAL FLOOR BEAMS, ABUTMENTS, RETAINING WALLS AND ARCHITECTURAL CONCRETE. /1

	BM #	ELEVATION (FT)	DESCRIPTION / LOCATION
1.	12-04070	247.26	CUT SPIKE 7FT S OF S CURB LINE 7TH ST; 0.8FT W OF W END OF HANDRAIL TO BRIDGE 25FT E OF SANTA FE AVE.
2.	11-02339	318.86	WIRE SPK IN W CURB CHICAGO ST; 5FT N OF N P.L. WHITTIER BLVD; N END CB

THE VERTICAL DATUM IS BASED UPON THE CITY OF LOS ANGELES PRECISE BENCH BOOK, NATIONAL GEODETIC VERTICAL DATUM OF 1929 (NGVD 29) - 1985 ADJUSTMENT IN FEET.

NOTES:

1. DESIGN TIP ELEVATIONS ARE CONTROLLED BY THE FOLLOWING DEMANDS:
   (a) COMPRESSION, (b) TENSION,
   (c) SETTLEMENT, AND (d) LATERAL LOADS.
2. THE SPECIFIED TIP ELEVATION SHALL NOT BE RAISED.
3. NORTH & SOUTH PILES AT EACH BENT HAVE THE SAME PILE DATA UON.
4. FOR BENT SKEW ANGLE SEE DRAWING NOS. S0-06 THROUGH S0-09.
5. FOR CUT-OFF ELEVATION OF 84" DIAMETER CIDH PILES AT STAIRS, SEE DRAWING NOS S8-50 THROUGH S8-52.
6. AT 24" Ø CIDH CONCRETE PILES, TYPE 1 AND TYPE 2 REFER TO DIFFERENT PILE LENGTHS. SEE DRAWING NUMBERS S2-01 AND S2-02 FOR LAYOUT OF TYPE 1 AND 2 PILES.

RFI No.12 : The City Surveyor will certify and stamp the " Controrol Plat " and transmit formally to SSW.
